

Annex 11

Trigger for co-ordination in the Fixed Service

1. Co-ordination distance

1.1 The co-ordination distance depends on the frequency range. The distances in the following table are recommended:

Frequency range [GHz]	Co-ordination distance [km]
1 - 5	200*
>5 - 10	150*
>10 - 12	100
>12 - 20	80
>20 - 24.5	60
>24.5 - 30	40
>30 - 39.5	30
>39.5 - 43.5	20

* The co-ordination distance for frequencies below 10 GHz is limited to 100 km for antenna heights below 300m above sea level.

1.2 The concerned administrations are those whose territories are situated at a distance from the radio-relay station requesting co-ordination less or equal to the one defined in 1.1.
