THOUGHT LEADERS CONSIDERATIONS FOR SUCCESS

 Boost Innovation: Living labs embracing technology R&D (sensor, communication, IoT platforms & applications hackathons), business ecosystems (Public Private Partnerships & SMEs) and citizens.

(e.g. Alcatel-Lucent / JCDecaux partnership)Community engagement is key for

current regulations and ecosystem peers

Policy - Out of the box thinking for

 Community engagement is key for success; e.g.: citizen surveys & feedback loop; community trials; crowd sourcing, funding & adaption, success celebration.

SIX REQUIREMENT DRIVERS FOR 5G

WHAT WILL A 5G NETWORK LOOK LIKE?

A SMART ASIA-PACIFIC BECOMING THE LEADING REGION OF THE 21ST CENTURY

A VIBRANT MARKETPLACE WITH STRONG POLITICAL WILLINGNESS

- 2018-2020: a race to stay at the technological and competitive edge with future networks (5G and Virtualisation in Japan, Korea)
- ASEAN 2016-2020: achieving the full connectivity/capacity at the lowest price in ASEAN. Mobile BB has the crucial technology and fixed/fiber in dense urban areas
- successful implementation of government led BB infrastructure (Australia, NZ and Singapore) but what are the next services innovation to stimulate competition and the economy (big data, M2M)?
- Some countries (India, Singapore) have launched ambitious initiative to create smart cities/nation
- Operators business services: potential growth for enterprise solution and innovation (virtualization and cloud service). Strong footprint of big operators and expansion for local operators.

DEVELOPING A MODERN REGULATORY APPROACH

- Promoting and facilitating networks investment(access to all kind of passive infrastructure, simplification of rights of way granting, mandatory fibre pre-cabling for new buildings, spectrum allocation and sharing)
- Adapting regulatory framework a horizontal layer approach: ensuring healthy and sustainable competition at each layer and avoiding gridlocks between any layers that become inter-dependant
- Operators should be allowed to monetize the data flow through service differentiation which is key to foster innovation, new services and meet demand for different levels of quality. (e.g. providing End to End QoS service delivery, in becoming Cloud and CDN providers)
- Spectrum allocation should be strongly harmonized at regional level to favor timely allocation of frequencies for LTE and prevent market fragmentation.
