Executive summary of my presentation

Title: Making innovation with ITU-D

This presentation aims to provide support to discuss visions of ITU-D activities in this new period after WTDC-17. First, achievement of the last SGs which were held in Geneva two weeks before is introduced and it promotes to conduct workshops during SG meetings to make “interaction” between member states. Next, Japan’s experience for improvement of “implementation” is shared with several projects in various countries. Finally importance of regional partnership is mentioned. I hope this presentation would help your activity to realize “innovation”.
