Networked InfraStructure for Innovative home Care Solutions (NITICS)

I will NOT tell you ...

The growth of an idea

- A few years back we had an idea...
- Ageing well: how to improve the quality of life of elderly people living at home (indipendence):
 - **Life quality does not only depend on health paramenters, but also on the environment we leave in**
- Need:
 - Combine data from different sources using different communication protocols
 - Unified front end masking technological barriers
- Before to start: Milestone 1: KYC! (KYU!)
Surveys and interviews to investigate acceptance readiness and define product specifications
- Development, refinements, test campaigns, pilot installations in Switzerland, France, Romania and Slovenia

NITICS: the growth of an idea

- Health devices (blood pressure, weight, heart rate, oxymetry,)
- Environmental parameters (light, water, windows, door, temp., ...)
- Personal calendar & reminders (medication, activities, ...)
- Indoor person localization
- Alerting of users and care givers
- Graphical interface for 2 user profiles: end-users; care-giver

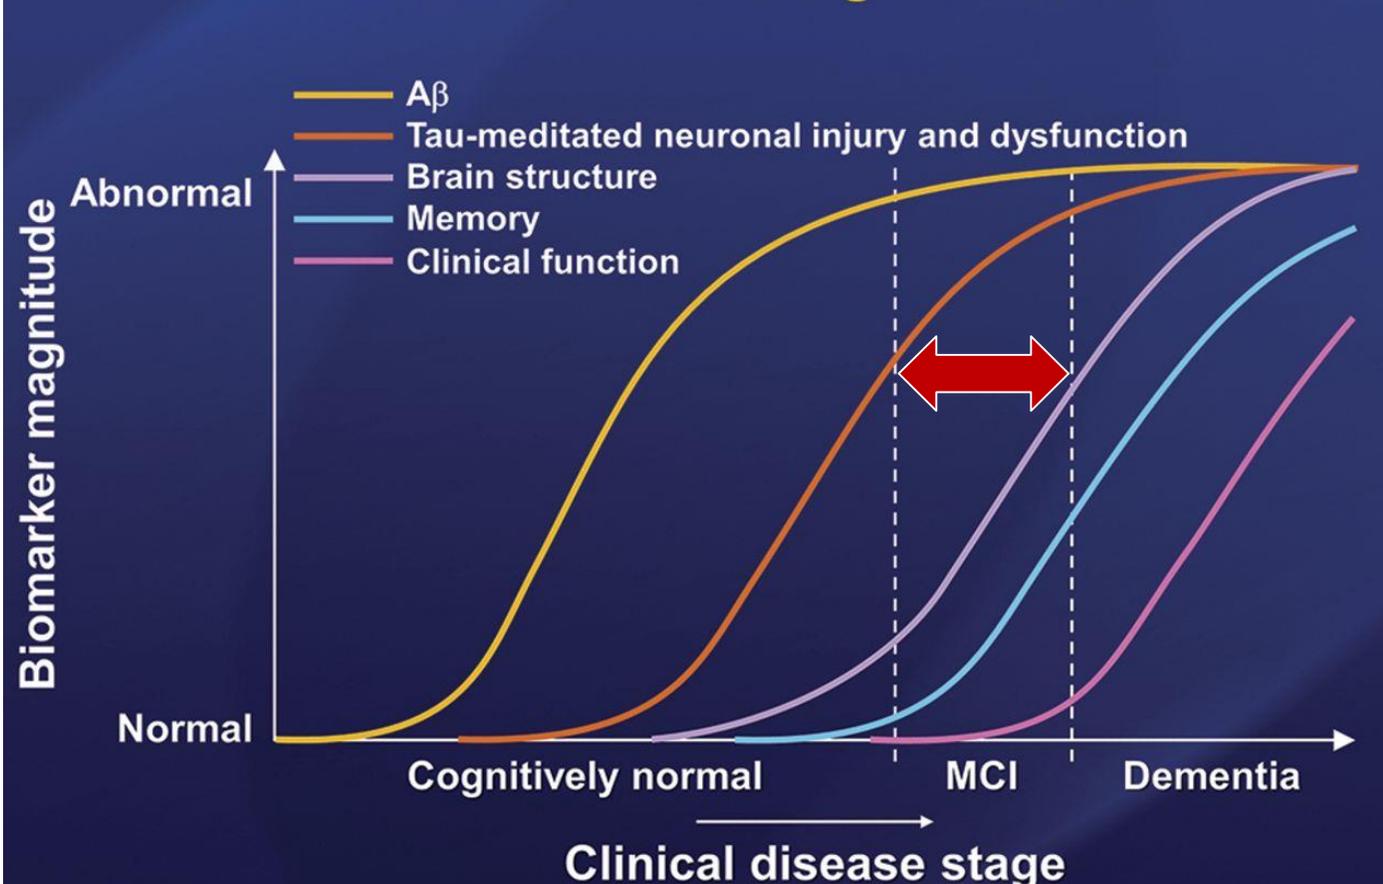

- Installations in 4 Countries (France, Romania, Slovenia, Switzerland)

Product evolution: NITICS+

... toward persons with cognitive or intellectual disabilities

Hypothetical Model of Dynamic Biomarkers of the Alzheimer's Pathological Cascade

Assisted Living Support System

Think
INNOVATION for better
QUALITY of LIFE!
