Viasat

Odessa
April 25, 2019

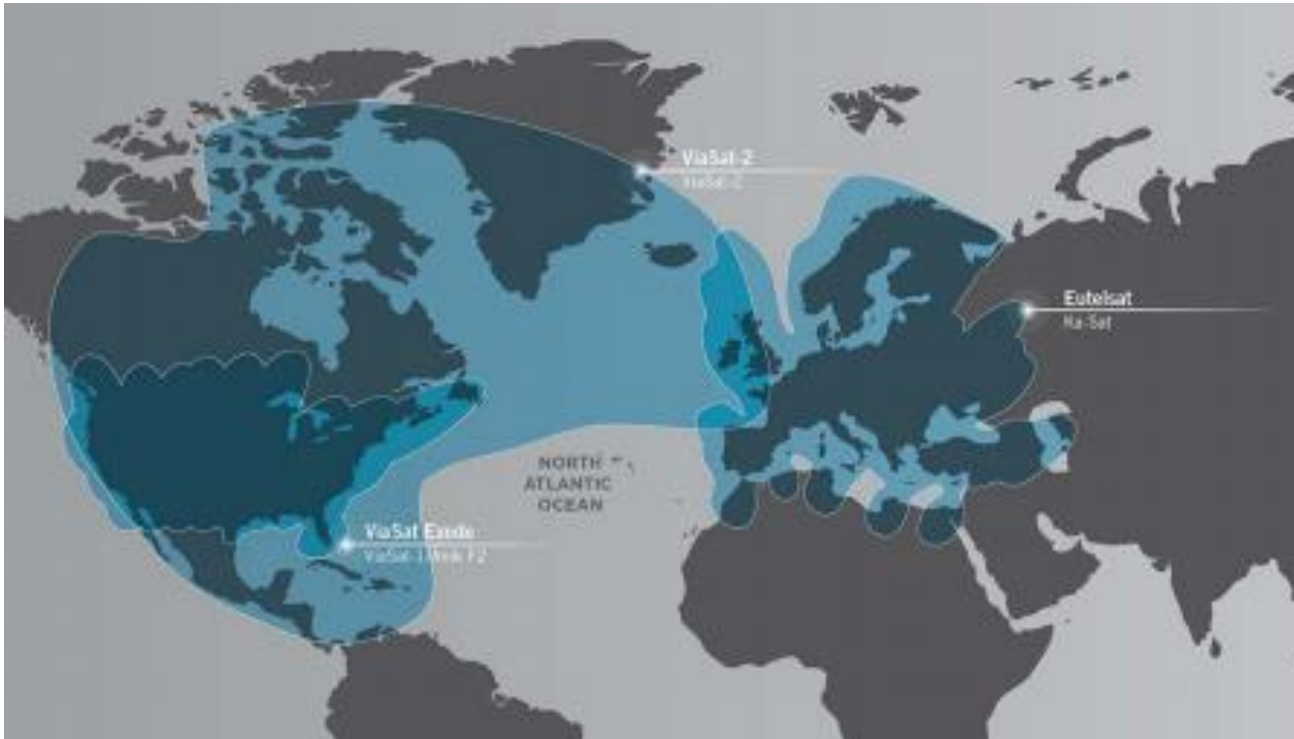

Viasat is a global communications company
that believes everyone and everything can
be connected

Coverage Evolution with Entire Ka-Band

ViaSat-1 & 2

ViaSat-3

Fast connections for consumers and businesses

Unlimited home internet plans mean unlimited possibilities

Business internet and Wi-Fi for hard-to-serve locations

Connecting the unconnected to affordable high-speed internet

The best Wi-Fi in the sky gives every passenger freedom to stream

Stay productive and entertained on private aircraft

Fast, reliable internet for cruise ships, pleasure craft, and other vessels

Fast connections for consumers and businesses

Unlimited home internet plans mean unlimited possibilities

Business internet and Wi-Fi for hard-to-serve locations

Connecting the unconnected to affordable high-speed internet

Ka-Band Satellite-Powered Community Wi-Fi

- Wi-Fi hotspots powered by Ka-Band satellite serve entire communities
- Deployable in hours
- Customers use their existing phones and tablets
- 2,000+ communities and 1,000,000+ people covered
- Adding 100s of communities per month
- Expanding around the world

Community WiFi

Community WiFi

WiFi Mesh

Satellite Broadband

Community WiFi

Satellite Broadband

Viasat Teams with Facebook

Accelerating rollout of sustainable Community WiFi

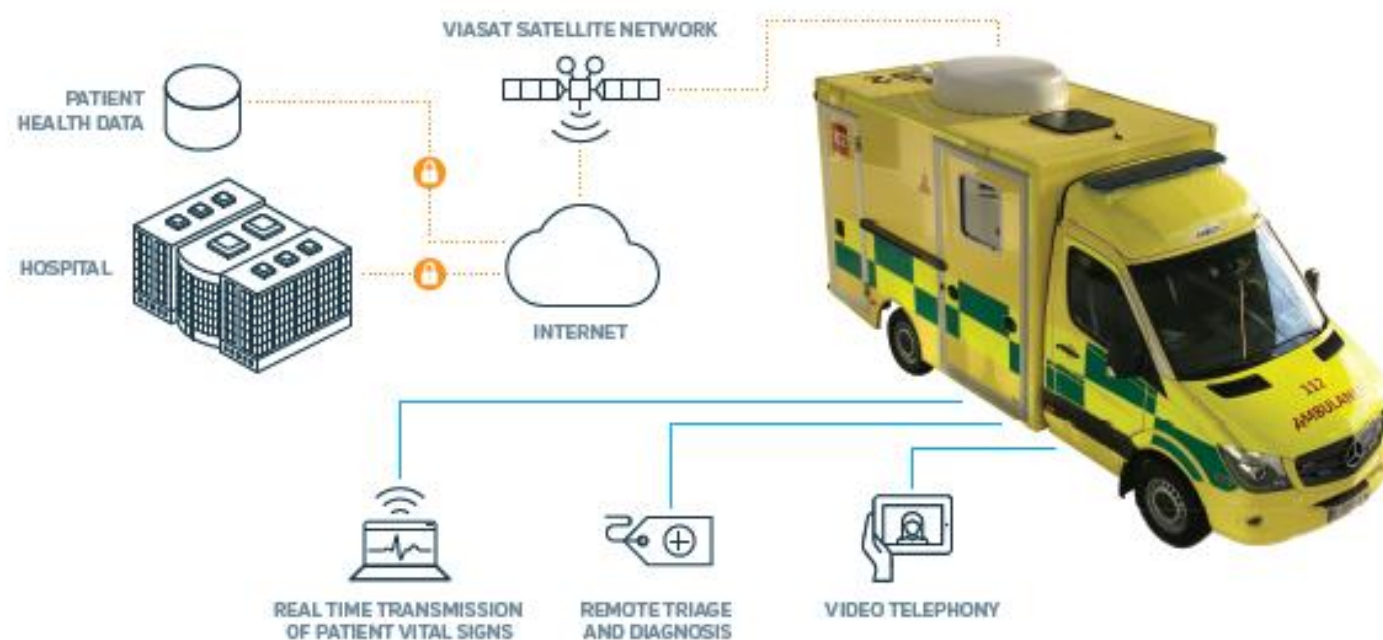

- > Facebook helping identify unconnected and poorly connect communities to reach more quickly
- > Cost and accessibility are main drivers
- > Traditional internet providers focus on densely populated areas
- > Satellite is a better solution in many areas
- > New high-capacity satellites joined with local wifi networks/splitting terminal use among many users
- > More capacity + lower bandwidth cost = service to all
- > Business driven models = sustainability

Telemedicine

Every Second Counts: continuous connectivity in urban and rural areas

- > Critical Care: fast transfer of patient medical data to doctors
- > Remote diagnosis: enabling triage on the way to medical centers
- > Video telephony: connecting first responders with doctors in real time

Brazil: Brumadinho Dam Disaster

Countrywide coverage: existing network and can be deployed instantly

- > Because satellite broadband already covers *all* of Brazil, quickly deploying site-specific communications is easy
- > Mounted antennas on any fixed surface they could find
 - Concrete blocks
 - Office buildings
 - Cable reels
 - Mud-mired cars
- > Networks available across first responder communities (e.g., defense, police, fire, medical)

Puerto Rico: Hurricane Maria

Critical communications: enabling coordination of repair and support missions

- Satellite is the the 'go to' technology for global disasters
- Communications when nothing else is available
- Supporting first responders with reliable connectivity
- Instant local networks

NGOs Using Satellite Imagery and Comms for Refugees

Monitoring and supporting refugee populations

- Case Study: Kutapalong Refugee Camp, Bangladesh (December 2017)
- Number of forcibly displaced people is increasing
- Satellite mapping information can reduce amount of staff
- Ensures better access for support services (e.g., water, waste collection)
- Ability to monitor changes

Call to action from government policy makers

- > Satellite broadband is essential for disaster preparedness
 - Quick to setup, when coverage is enabled
 - Less susceptible to damage than terrestrial infrastructure

- > Policies for satellite broadband
 - Allocate and reserve spectrum for satellite (eg. 28GHz)
 - Rapid licensing and permissions for providing coverage
 - Inclusion in emergency preparedness planning

- > Satellite broadband also helps achieve the sustainable development goals

A satellite view of Earth at night, showing the curvature of the planet and the glowing lights of cities and continents. The atmosphere is visible as a thin blue and green layer along the horizon.

Thank you
