ITU Regional Initiatives

Europe: "Broadband infrastructure, broadcasting and spectrum management"

CIS: "Fostering innovative solutions and partnerships for the implementation of Internet of Things technologies and their interaction in telecommunication networks, including 4g, IMT-2020 and next-generation networks, in the interests of sustainable development"

Main Conclusions

Main Conclusions

- Ukraine is well on its way to create an environment for 5G and new and emerging technologies including AI and IoT.
- Cooperation and collaboration on harmonization between Ukraine and Europe on spectrum issues needed.
- Updating and modernization of legislation and regulation required to create an enabling environment for 5G in the Ukraine.
- Collaboration between the ITU and Ukraine on these issues continues to be fruitful and important for the digital economy.
- Agreement of collaboration between the EU and ITU on the collaboration of blockchain for future technologies.
