## OVERVIEW OF CoE INITIATIVE

The Centres of Excellence (CoE) programme was launched by the International Telecommunication Union (ITU) in 2000, aiming to support capacity building in the field of information and communication technologies (ICTs). Designed to offer continuous education to ICT professionals and executives in the public and private spheres through face-to-face or distance learning programmes, the Centres serve as regional focal points for professional development, research, and knowledge sharing, as well as provide specialist training services to external clients. With the support from multilateral and regional organizations, CoE networks have been established in all ITU regions. The current network is composed of 29 Centres across the globe, six each in Africa, the Americas, Arab States and Asia-Pacific regions, five in the Europe region and three in the CIS region.

## CENTRES OF EXCELLENCE FOR EUROPE

The second cycle of the new Centre of Excellence programme started in January 2019 and will end in December 2022. A total of 29 institutions were selected to operate as Centres of Excellence during this period. The following institutions were selected in Europe to provide trainings in particular six priority areas.

	Name of Institution	Country	Priority areas
	A. S. Popov Odessa National Academy of Telecommunications (ONAT)	Ukraine	Wireless & Fixed Broadband Digital Broadcasting
	Faculty of Electrical Engineering and Information Technologies, Ss. Cyril and Methodius University, Skopje (FEEIT)	North Macedonia	Wireless & Fixed Broadband
	Institute for Security and Safety (ISS) at the Brandenburg University of Applied Sciences	Germany	Cybersecurity
	National Institute of Telecommunications (NIT)	Poland	Internet Governance Wireless & Fixed Broadband
	NRD Cyber Security (NRD CS)	Lithuania	Cybersecurity
	The Abdus Salam International Centre for Theoretical Physics (ICTP)	Italy	Internet of Things Big Data & Statistics

## SCOPE

This catalogue has been produced by the ITU Office for Europe in collaboration with five ITU Centres of Excellence in Europe to highlight and promote the capacity building courses provided by the centres.

While participation is open to participants from all countries, stakeholders from the Member States of the Europe region (as defined at ITU) are primarily encouraged to participate in the courses. These countries are Albania, Andorra, Austria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Georgia, Greece, Hungary, Iceland, Ireland, Israel, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, North Macedonia, Moldova, Monaco, Montenegro, Netherlands, Norway, Poland, Portugal, Romania, San Marino, Serbia, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, Ukraine, Vatican City State and the United Kingdom.

The courses aim to increase participants' understanding, knowledge and awareness in the following areas:

- Wireless & fixed broadband
- Digital broadcasting
- Cybersecurity
- Internet governance
- Big data & statistics
- Internet of things

Courses are provided either face to face or online – via the ITU Academy e-learning platform.

All courses have a test component. A certificate of achievement is given to candidates who successfully complete the end-of-course assessment(s).

Information on the registration process and payment methods can be found on the ITU Academy website: [academy.itu.int](http://academy.itu.int)

Changes in course dates may occur and are reflected on the ITU Academy website: [academy.itu.int](http://academy.itu.int)

# TRAININGS OFFERED BY ITU CoEs FOR EUROPE

In 2020 the ITU Centres of Excellence for Europe is offering 21 trainings. Three different kind of courses are provided. **Face-to-face courses** (in blue), **online courses** (in yellow), **self-paced courses** (in green). Trainings are presented in chronological order with online and self-paced courses presented first, followed by all face-to-face courses. *\*Please note that due to the Covid-19 Pandemic, the information in this catalogue is subject to change as the situation in Europe and the greater world continues to evolve.*

No	Training course topic	Coe	Dates	Venue	Training fee	Type of training
1	Cybersecurity technique	ISS	1 January – 31 December	Self-Paced	250 USD	Self-paced
2	Cyber incident response	ISS	1 January – 31 December	Self-Paced	250 USD	Self-paced
3	Strategic aspects for internet governance and innovations	NIT	3 -10 February	ITU Academy Platform	150 USD	Online
4	Wireless access technologies to internet network	NIT	9-16 March	ITU Academy Platform	150 USD	Online
5	Security and QoS in internet network	NIT	13-20 April	ITU Academy Platform	150 USD	Online
6	Future broadband internet, cloud computing and internet of things	FEEIT	26 May - 22 June	ITU Academy Platform	150 USD	Online
7	Legal, regulatory and technical aspects of cloud computing in international data transfers	NIT	15-22 June	ITU Academy Platform	150 USD	Online
8	Information security management system	ISS	15 July – 31 December	Self-Paced	250 USD	Self-paced
9	Technical, business and regulatory aspects of 5G networks	NIT	24-31 August	ITU Academy Platform	150 USD	Online
10	5G technologies for IoT	ICTP	28-29 September	ITU Academy Platform	200 USD	Online
11	QoS technologies and regulation for fixed and mobile	NIT	28 September - 5 October	ITU Academy Platform	150 USD	Online
12	Mobile broadband internet, 5G and future services	FEEIT	17 November – 14 December	ITU Academy Platform	150 USD	Online
13	Data Science: Technical & business aspects for open innovation	ICTP	10-12 August	Trieste, Italy	150 USD	Online
14	Trends and advances in Data Science, Machine Learning, and Artificial Neural Networks	ICTP	13-14 August	Trieste, Italy	150 USD	Online
15	Building an effective cybersecurity team	NRD-CS	5-8 October	Vilnius, Lithuania	800 USD	Face-to-face
16	Key aspects and governance of internet of things, big data, and artificial intelligence	NIT	22-23 October	Warsaw, Poland	500 USD	Face-to-face
17	The use of adaptive technologies to transmit video over radio channels	ONAT	5-6 November	Odessa, Ukraine	FREE (IN RUSSIAN)	Face-to-face (remote participation is possible)

18	Industrial cybersecurity and incident response	ISS	9-11 November	TBC	1250 USD	Face-to-face
19	Applications of satellite IoT networks	ICTP	16-17 November	Trieste, Italy	200 USD	Face-to-face
20	Incident response practice hands-on scenario-based training	NRD-CS	30 November 03 December	Vilnius, Lithuania	800 USD	Face-to-face
21	Legal aspects of artificial intelligence in business, household and public sector	NIT	7-14 December	Warsaw, Poland	150 USD	Online

# CYBERSECURITY TECHNIQUES

| 1 January – 31 December 2020 |

## ORGANISED BY

---

## LANGUAGE

English

---

## FEES

250 USD

---

## MODE

Self-Paced

---

## DURATION

Flexible

## COURSE CODE

200S24763EUR-E

## Description:

This online course will provide theoretical and practical knowledge of it and cyber security and security methods for computer, network and electronic communication.

The course consists of various chapters and will cover fundamentals, such as it versus ics, threats and their sources, authentication, computer access control, cryptography, network security, network firewall concepts, intrusion detection.

The student will get a comprehensive view on security in the cyber space.

## Audience:

Everybody working in the cyber as well as isolated computer environment

## Trainer:

Mr. Dmytro Cherkashyn

## CYBER INCIDENT RESPONSE

| 1 January – 31 December 2020 |

### Description:

The CIR course will provide students with all necessary knowledge of cyber incident response activities, what are main goals and challenges, and explaining main roles and responsibilities in such important process.

They will get most up to date trends in this area with an emphasis on most important details of each cyber incident response stage.

Upon the successful completion of this course, students will be able take a part in development and implementation of cyber incident plan.

### Audience:

Security engineers, computer security specialists, computer incident response plan participants, line managers, security consultants

### Trainer:

Mr. Dmytro Cherkashyn

# STRATEGIC ASPECTS FOR INTERNET GOVERNANCE AND INNOVATIONS

## Description:

Internet and IP protocol is the winning technology in current telecommunications world. “Over IP” is the concept that can be considered in the context of almost all today’s telecommunications services. Good understanding of this “IP world” requires not only knowledge of technical aspects, of the IP technology, but also strategic, political business issues.

The course aims at presenting the current process of innovations in Internet from all of these important perspective of view.

## Audience:

The course is addressed to corporate executives and managers, policy makers, regulators, i.e. middle-level managers, administrators, officials and engineers dealing with planning, developing, implementing and managing current and future telecom networks.

## Trainer:

Prof. Dr. Toni Janevski

# WIRELESS ACCESS TECHNOLOGIES TO INTERNET NETWORK

| 9-16 March 2020 |

## Description:

Internet and IP protocol is the winning technology in current telecommunications world. "Over IP" is the concept that can be considered in the context of almost all today's telecommunications services. Current users want to have access to any telecommunications services, from any place, and at any moment. That's why mobility and wireless access to Internet plays so important role.

The course aims at presenting the key aspects of the current most important wireless access technologies to this Internet world.

## Audience:

The course is addressed to corporate executives and managers, policy makers, regulators, i.e. middle-level managers, administrators, officials and engineers dealing with planning, developing, implementing and managing current and future telecom networks.

## Trainer:

Prof. Dr Toni Janevski

# SECURITY AND QoS IN INTERNET NETWORK

| 13-20 April 2020 |

## COURSE CODE

200I24819EUR-E

## Description:

This course will focus on Security and Quality of Service (QoS) in Internet network from technology, regulation and business aspects. It will cover Internet fundamentals, including Internet protocols and architectures, Internet security standards and approaches as defined by IETF (Internet Engineering Task Force), as well as ITU's security architectures for end-to-end communications. Further, the course will incorporate cybersecurity approaches from the ITU viewpoint, and security aspects of emerging cloud computing and Internet of Things (IoT). Further, the course will incorporate Internet QoS, including the standardized solutions and practical approaches for provision of end-to-end QoS. In that manner it will cover QoS parameters as defined by the ITU and QoS for data (i.e., Over-The-Top services) and mobile services. Finally, the course will include network neutrality, Internet KPIs (Key Performance Indicators) and their measurements.

## Audience:

This course is targeted at managers, engineers and employees from regulators, government organisations, telecommunication companies and academia, who are interested in understanding, implementation and regulation of Security and QoS in Internet Network, including technologies, standardization, regulation and content. Other institutions and individuals that are dedicated in building their capacity related to Security and QoS in Internet Network are also welcome to participate.

## Trainer:

Prof. Dr Toni Janevski

# FUTURE BROADBAND INTERNET, CLOUD COMPUTING AND INTERNET OF THINGS

| 26 May - 22 June 2020 |

## COURSE CODE

200I24822EUR-E

## Description:

This course will focus on Future Broadband Internet, Cloud Computing and Internet of Things, including technologies, regulation and business aspects. It will cover Internet technologies, including IPv6, migration from IPv4 to IPv6, DNS, DHCP, Internet networking, HTTP 2.0, IP interconnection, IP QoS, cybersecurity, as well as Internet governance. Also, the course will include MPLS/IP transport, VPNs, Carrier Ethernet, as well as future gigabit copper, fiber optic, submarine cable, and satellite broadband access. Further, it will cover Software Defined Networking (SDN) and network virtualization (NFV) for fixed and mobile access and core, ITU's Cloud Computing architectures and models (SaaS, PaaS, IaaS), cloud security and privacy, OTT and telecom clouds, edge and fog computing services, as well as clouds governance. It will also include Internet of Things (IoT) and Web of Things (WoT), including critical IoT and massive IoT, data management, Big Data architectures, Big Data-driven networking, as well as IoT/data security, privacy and trust. The course will also include use of Artificial Intelligence (AI) for Internet and telecoms. Finally, it will cover future broadband OTT services (video, social, AR/VR, Web 3.0) and net neutrality, future IPTV, Industry 4.0, smart city, future clouds, future IoT/Big-Data/AI services, including their business and regulatory aspects.

## Audience:

This course is targeted at managers, engineers and employees from regulators, government organisations, telecommunication companies and academia, who are interested in understanding, implementation and regulation of Future Broadband Internet, Cloud Computing and Internet of Things, including technologies, regulatory and business aspects. Other institutions and individuals that are dedicated in building their capacity related to Future Broadband Internet, Cloud Computing and Internet of Things are also welcome to participate.

## REGISTRATION DEADLINE

15 June 2020

---

## COURSE CODE

200I24825EUR-E

## Description:

The subject matter of this web seminar refers to international data transfers whereby cloud computing solutions will be applied. In relation to the subject matter various types of data will be discussed, including personal, which will be analysed in the context of different regulations. The web seminar will include technical aspects of application of various types of the cloud computing and its impact on the application of the legal framework. The seminar will also address different roles of cloud actors and its obligations under relevant regulations. In addition, the seminar will discuss liability issues for providing cloud services in an international dimension. At the outset of the seminar a knowledge test will be conducted. The seminar will include regulatory aspects of the use of cloud computing, including regulatory control issues.

## Audience:

The target group of this workshop include representatives of regulatory bodies, dealing with cloud computing matters, telecommunications issues, consumer protection issues, cyber security issues, data protection issues.

## Trainer:

Dr hab. Andrzej Krasuski

# INFORMATION SECURITY MANAGEMENT SYSTEM

## Description:

This course will focus on technical, business and regulatory aspects of the 5G mobile networks. It include will 4G mobile technology transition toward the 5G, considering the access and core networks as well as end-user services. Mobile broadband Internet after 4G will continue with the next generation, 5G, so the course will cover also IPv6 and its impact on 5G mobile networks. Further, it will include M2M (Machine-to-Machine) and mobile Internet of Things (IoT) services are foreseen types in future 5G mobile environments, as well as mobile cloud computing implementations. Also, the course will include spectrum management for IMT (International Mobile Telecommunications) including the 5G considerations. The QoS in mobile networks going from 3G/4G mobile world toward the 5G will continue to be important, hence the course will also focus on QoS and QoE in next generation mobile environments. Finally, the course will focus on emerging services and applications in 5G mobile networks in different verticals, including technology, as well as their business and regulation aspects.

## Audience:

This course is targeted at managers, engineers and employees from regulators, government organisations, telecommunication companies and academia, who are interested in understanding, implementation and regulation of technical, business and regulatory aspects of 5G network, including technologies, standardization, regulation and content. Other institutions and individuals that are dedicated in building their capacity related to technical, business and regulatory aspects of 5G network are also welcome to participate.

# 5G Technologies for IoT

| 28 - 29 September 2020 |

## ORGANISED BY

<b>LANGUAGE</b>
English
<b>FEES</b>
200 USD
<b>MODE</b>
Online
<b>DURATION</b>
2 days
<b>REGISTRATION DEADLINE</b>
September 25, 2020
<b>COURSE CODE</b>
20WS24833EUR-E

### Description:

5G technologies address a variety of applications in many fields, but those related with IoT are of particular interest given the great number of devices that are being connected. There is no doubt that 5G will play a pivotal role, both in massive and in critical applications.

This capacity building course aims to provide the audience with an understanding of the 5G aspects relevant to IoT. Participants will be exposed to the general aspects of wireless networking with the particular requirements of machine type communications and will then dive into specifics of LTE-M and NB-IoT.

Practical examples of 5G technologies for IoT will be demonstrated.

### Audience:

The training course is designed for:

- Electrical engineers
- Telecommunications engineers
- Computer scientists
- Regulators
- Telecom Operators
- Networks Operators

### Trainer:

Mr. Marco Zennaro and Mr. Ermanno Pietrosemoli

# QoS TECHNOLOGIES AND REGULATION FOR FIXED AND MOBILE

| 28 September – 5 October 2020 |

## REGISTRATION DEADLINE

28 September 2020

---

## COURSE CODE

200I24834EUR-E

## Description:

This course will focus on technical, business and regulatory aspects of QoS for Fixed and Mobile Networks. It includes QoS (Quality of Service) and QoE (Quality of Experience) fundamentals by ITU, as well as traffic and QoS management in Internet and IP networks. Further, it includes QoS for fixed ultra-broadband access, including QoS solutions in metallic and optical networks, carrier grade Ethernet QoS, as well as end-to-end QoS.

The course also covers QoS for mobile ultra-broadband access, including 4G and 5G mobile technologies and their QoS capabilities and approaches. The telecom networks are built for provision of services. In that manner the course covers QoS-enabled services provisioning, including QoS and QoE for VoIP, video and IPTV services, as well as QoS for Internet data services (i.e., Over-The-Top services). Each telecommunication network is interconnected to other networks forming the global network of Internet and managed IP networks, so the course includes interconnection and its QoS aspects. Further, it covers generic and specific QoS parameters, KPIs (Key Performance Indicators) and their measurements.

The global Internet is based on network neutrality approach for OTT/data services, so the course also covers network neutrality and its regulation. The QoS constantly increases in its importance with the digitization and innovation of various critical services, so the course includes QoS regulatory framework based on technical, business/economic and regulatory principles of QoS for services over fixed and mobile networks.

## Audience:

This course is targeted at managers, engineers and employees from regulators, government organisations, telecommunication companies and academia, who are interested in understanding, implementation and regulation of QoS for Fixed and Mobile networks, including technologies, standardization, and regulation. Other institutions and individuals that are dedicated in building their capacity related to QoS Technologies and Regulation for Fixed and Mobile Networks are also welcome to participate.

**Trainer:** Prof. dr Toni Janevski

# MOBILE BROADBAND INTERNET, 5G AND FUTURE SERVICES

## COURSE CODE

200I24839EUR-E

## Description:

This course will cover mobile broadband Internet, 5G and future services, including technologies, regulation and business aspects. The course will cover Internet and IP mobility management approaches, Mobile IPv6, and mobile Internet governance. Also, it will include 4G/4.5G access, LTE-Advanced and LTE-Advanced Pro, Evolved Packet System (EPS) architecture, WiFi traffic offload, 4G QoS, small cells approaches, and spectrum management. Further, the course will cover 5G New Radio (NR) access, 5G Next Generation core, 5G network slicing/virtualization and SDN (Software Defined Networking), 5G QoS, 4G to 5G transition, and 5G spectrum management including 5G practical implementations. It will also include mobile/wireless Internet of Things (IoT) in 4G and 5G, including massive and critical IoT services, as well as Multi-access Edge Computing (MEC) and fog computing. It will also include enhanced Mobile Broadband (eMBB), Ultra-Reliable and Low-Latency Communication (URLLC) and massive Machine Type Communication (mMTC), as well as use of Artificial Intelligence (AI) and Machine Learning for 5G. Finally, the course will cover future mobile OTT services and Internet net neutrality, VoLTE and VoNR, 5G media streaming, AR/VR, 5G TV broadcast, 5G fixed-wireless access, vehicular to everything (V2X), industrial automation, 5G smart services, as well as business and regulatory aspects of future services.

## Audience:

This course is targeted at managers, engineers and employees from regulators, government organisations, telecommunication companies and academia, who are interested in understanding, implementation and regulation of Mobile Broadband Internet, 5G and Future Services, including technologies, regulatory and business aspects. Other institutions and individuals that are dedicated in building their capacity related to Mobile Broadband Internet, 5G and Future Services are also welcome to participate.

## Description:

This course presents with hands-on examples and use-case scenarios specific topics important for ethical use of Data Science for national development, initiatives and frameworks.

By the end of this course, the audience should be able:

- To present the role of Open Science, Open Data and Open Access in development
- To introduce several Data Science tools for medium to large scale Analytics
- To understand the roles of Machine Learning and Artificial Neural Networks in innovations
- To understand aspects of data analysis on distributed computing platforms: High Throughput Computing (HTC) and Cloud Computing

## Audience:

- Officials and representatives from national or regional organisations (government and non-governmental) with a focus on Science and Technology Policy
- Professionals, Engineers, Researchers and Scientists from all disciplines / domains
- Regulators and others

## Trainer:

L. Bezuidenhout, R. Murenzi, H. Shanahan, R. Quick, S. Hodson, Clement Onime

### COURSE CODE

20WS24820EUR-E

### Description:

Continuous growth and reliance on Information Communication and Technologies (ICT) results not only in benefits to organizations, but also in cyber incidents, which threatens ICT infrastructure and sensitive data inside it. The ability to timely detect, mitigate and recover from cyber incidents is a crucial capability to organizations, established and managed within Computer Security Incident Response Teams (CSIRTs/CERTs/CIRTs) and Security Operation Centers (SOCs), thereafter - cybersecurity team.

The course dives deep into CSIRT/SOC establishment practice, where combination of theory, unique experience with lessons learned, and hands-on practice give attendees a clear and actionable picture on how to build an effective cybersecurity team.

Fourth optional day is an iteration of the course and is dedicated to look into the CSIRT/SOC technologies on the spot. During the site visit attendees are led through service desks / incident tracking systems, vulnerabilities assessment and penetration testing tools, stack for cyber threat intelligence.

This training helps to successively prepare for cyber security team establishment and answers the main questions raised before starting:

- How to build an effective cybersecurity team? Overview, discussion, and practice about a mandate, governance, team and its structure, timeline, lessons learned from similar establishments, financial planning.
- What services in addition to incident management to introduce and how? Applied mandatory and complimentary services, best international practice for services models, incident management, incident management workflows and variations.
- What is technology behind it? Scrutiny of principal architecture for CSIRT stack, integrations and managerial (not technical) look into technologies, automation vs manual, and technology trends.
- How to mature security services and when? Elaboration of KPIs, SLAs and related metrics, security briefings, weekly/monthly/quarterly/yearly reports, analysis of examples and exercises on how to plan improvements for security services provided.

- What is the baseline for it? Presentation of best international models measuring the maturity of cybersecurity team and its various components, advice on how to use them and how they help in operational environment.

**Audience:**

The course is designed for non-technical professionals who are or will be responsible for cybersecurity teams/CSIRT/CERT/SOC establishment, management and growth in governmental and private sectors.

**Trainer:**

Mr. Vilius BENETIS, CSIRT/SOC architect, cybersecurity incident handling expert, researcher practitioner, CEO of NRD Cyber Security

# KEY ASPECTS AND GOVERNANCE OF INTERNET OF THINGS, BIG DATA AND ARTIFICIAL INTELLIGENCE

| 22-23 October 2020 |

Warsaw, Poland

## ORGANISED BY

National Institute  
of Telecommunications

## LANGUAGE

English

## FEES

500 USD

## MODE

Face-to-face

## DURATION

2 days

## REGISTRATION DEADLINE

21 October 2020

## COURSE CODE

20WS24835EUR-E

## Description:

This course will focus on technical, business and regulatory aspects of Internet of Things (IoT), Big Data and Artificial Intelligence (AI). It will cover Internet technologies for IoT, then IoT standards, architectures and interoperability, as well as IoT policies and regulations, including IoT security and privacy issues. The course will include IoT services in 4G and 5G mobile systems, including massive IoT and critical IoT use cases. The IoT generates large amounts of data that cannot be processed by traditional techniques, and such data is referred to as Big Data. In that manner, the course will include Big Data overview, Big Data ecosystem and reference architecture, Big Data technologies and use cases, as well as business and regulatory challenges for Big Data. Artificial Intelligence (AI) is targeted for processing Big Data in Internet and telecom networks. In that regard the course will cover introduction to AI in ICT/telecom world, and AI applications in Internet and telecom worlds, including Machine Learning aspects for 5G mobile networks. The course will further include Big Data and AI challenges, business aspects, as well as policies and regulation. Finally, the course will cover Internet governance with regard to IoT, Big Data, and AI.

## Audience:

This course is targeted at managers, engineers and employees from regulators, government organisations, telecommunication companies and academia, who are interested in understanding, implementation and regulation of Internet of Things (IoT), Big Data and Artificial Intelligence (AI), including technical, business and regulatory aspects. Other institutions and individuals that are dedicated in building their capacity related to IoT, Big Data and AI, including technical, business and regulatory aspects, are also welcome to participate.

**Trainer:** Prof. Dr. Toni Janevski

**Venue:** National Institute of Telecommunications (NIT), Szachowa 1, 04-894, Warsaw, Poland

## INDUSTRIAL CYBER SECURITY AND INCIDENT RESPONSE

| 9-11 November 2020 |

Location TBC

### ORGANISED BY

### LANGAGE

English

### FEES

1250 USD

### MODE

Face-to-face

### DURATION

3 days

### REGISTRATION DEADLINE

1 November 2020

### COURSE CODE

20WS24831EUR-E

### Description:

This course will provide students with unique expertise in the area of critical infrastructure cyber security. The course will cover typical threats and vulnerabilities typical to it and industrial control systems.

Another part of the course will be dedicated to a case study on incident response in a hypothetical environment. This will be continued by the practical part, where students will play the role of hackers, who a targeting industrial control and security systems of the improvised company with the break-out session on consequences and potential mitigation strategies.

### Audience:

Operational engineers, inhouse security specialists, ot security specialists

### Trainer:

Dmytro Cherkashyn

# THE USE OF ADAPTIVE TECHNOLOGIES TO TRANSMIT VIDEO OVER RADIO CHANNELS

| 5-6 November 2020 |

Odessa, UKRAINE

## ORGANISED BY

---

## LANGUAGE

## COURSE CODE

20WS24836EUR-R

## Description:

Upon completion of this training, participants will have understanding of:

- Methods of analyzing the impact of uneven distribution of users in the cells on the network bandwidth for reconfiguring devices in the network and increasing bandwidth in general;
- Functional model of adaptive video transmission system in radiocommunication channels;
- Technology of creation, preparation, reception / transmission of video information for civil purposes.

## Audience:

This training is targeted at designers of digital broadcasting and wireless telecommunications systems in a variety of environments. The training will be also useful for specialists engaged in:

- provision of high-quality communication in urban terrain and high-quality color reproduction in various shooting and playback conditions
- designing antenna systems and improving them by applying adaptive technologies
- acoustic design of premises and provision of spatial sound in broadcasting systems
- introduction of new systems of visual information compression.

Also, the training may be of interest for the staff of organizations, enterprises and institutions dealing with the development of adaptive wireless communication systems, transmission of video content and information.

## Trainer:

Mr. Vladimir Pilyavsky

The centres of excellence (CoE) programme was launched by the International Telecommunication Union (ITU) at the turn of the millennium, aiming to support capacity building in the field of ICTs. Designed to offer continuous education to ICT professionals and executives in the public and private spheres, the Centres serve as regional focal points for professional development, research, and knowledge sharing, as well as provide specialist training services to external clients. With the support from multilateral and regional organizations, CoE networks have been established in a number of regions including Africa, the Americas, Arab States, Asia-Pacific, Commonwealth of Independent States (CIS) and Europe. The network is composed of 32 Centres across the globe, six each in the Africa, Americas, Arab, and Asia-Pacific regions, five in the Europe region and three in the CIS region.

# APPLICATIONS OF SATELLITE BASED IOT NETWORKS

## Description:

Satellite technology has an important role in driving the growth momentum behind the Internet of Things (IoT) and unlocking the promise of connected devices worldwide. Satellites serve as a key enabler for IoT applications across industries and across geographical borders.

In this capacity building activity we will cover technologies of GEO (geostationary) satellites in C-, Ku- and Ka-band, new LEO (low earth orbit) or HEO (highly elliptical orbit) constellations, as well as the new developments in nanosatellites.

As controlling the cost per device is of essence for the success of IoT applications, we will cover the sustainability issue of satellite-based IoT applications.

## Audience:

The training course is designed for:

- Electrical engineers
- Telecommunications engineers
- Computer scientists
- Regulators
- Telecom Operators
- Networks Operators

**Description:** For the efforts towards strengthening cyber security to be successful, technical teams must be specifically trained on practicalities of incident response. The course is designed to empower incident handlers to be effective at their work.

Data breaches are everywhere, and they're showing no signs of slowing down. Internal and external threats pose big risks to all types of organizations, only the damage and recovery time could be different. The training is dedicated to measure the readiness of CSIRT to deal with the most often real-world cases of cyber security incidents. The course is composed of series of exercises by providing participants with questionnaires and practical assignments on specific types of cyber security incidents.

Participants will be provided a set of specific pre-defined real-life incident scenarios. Several different incident handling cases are simulated to students and focused on incident detection and description, information gathering, analysis tools and techniques and incident handling phases by using RTIR (or related) tool. Cyber threat hunting tips are also provided to deeper knowledge in incident handling.

During hands-on exercises, participants will work with the following topics:

- Incident management key components;
- Information sources available, such as zone-h, shodan, pastebin, host and network logs;
- E-mail incidents investigation;
- Network logs-based incidents investigation;
- Host logs-based incidents investigation.

*Prerequisite: participants are required to bring a laptop*

**Audience:** The course is designed for CIRT members and all incident handlers who wish to be effective at their work.

**Trainer:** The training is led by prominent experts who are on daily basis involved in CSIRT related activities at national and organizational level in Lithuania and abroad.

**Marius URKIS** - NRD CIRT lead, cyber security incident handling and forensics expert

**Rimtautas ČERNIAUSKAS** - Technical cyber security consultant and investigator

## COURSE CODE

20WS24838EUR-E

## Description:

The subject matter of this training course is the discussion of legal framework applicable to Artificial Intelligence with international focus. By discussing the application of Artificial Intelligence, various types of Artificial Agents in many spheres of life will be considered, including: business activity, household, and the public sector. During the training course different definitions of Artificial Intelligence will be considered and discussed from a legal point of view. The workshop will also encompass liability issues connected with the use of Artificial Intelligence, including robots. Various concepts of liability will be assessed. Various examples of the application of Artificial Intelligence will be included. In addition, recommendations for future legislation will be presented and analysed. At the outset of the training course a knowledge test will be conducted.

## Audience:

The target group includes representatives of regulatory bodies, dealing specifically with Artificial Intelligence issues, but also with consumer protection issues, cyber security issues, data protection issues.
