

GOING DIGITAL IN EVERY STEP OF FOOD PRODUCTION

agroNET - Digital platform for sustainable farming

Helps farmers to reduce the use of inputs, while increasing yield and operational efficiency.

Good practice testimonials

“We started with digitization of grape production by introducing agroNET in number of our wineries during 2020. First year of implementation brings first benefits in decreasing the pest and disease managements costs up to 20%. We are excited to explore more functionalities provided in agroNET platform.”

Association of grape and wine producers Srem Fruska gora.

We have a long standing and very successful cooperation with DunavNET, based on the implementation of agroNET solution in our everyday practice. agroNET is used as the basis of the digital transformation that “Plantaže” is actively implementing in order to lay the foundations for the company’s development in the next decade.“

13 Jul - Plantaže

“We are using the agroNET platform for poultry production as a tool for optimization of raising laying hens and parental flocks. The platform brings us 24/7 insight into poultry barns without the need for on-site inspection a few times per day. This allows us to react on time and provide optimal environmental conditions for raising poultry.”

Laslo Sinkovic, poultry producer

Benefits

Crops

Real time monitoring of insects' activity

10-30%

Less water used

20%

Less pesticide used

Decreased soil degradation
Decreased leaching of nutrients
Better crops quality

Benefits

Poultry

24/7 insight into poultry barns
Improved animal wellbeing
Optimized feed consumption
Reduced waste
