An Open QoS Ecosystem for Accountability and Empowerment

Jozef Svrček

CEO & Founder Specure

What is Nettest?

Customer Success Story A Legacy of Excellence

Developed by the Austrian Regulatory Authority for Broadcasting and Telecommunications (RTR), RTR NetzTest stands as a testament to regulatory innovation and consumer empowerment in the digital age.

Built by RTR's telecommunications experts, RTR NetzTest achieves an ideal balance of technical precision and ease of use. Drawing on decades of regulatory experience, RTR has developed an open - source tool that effectively serves both institutional and consumer requirements.

Who is using Nettest?

Open - source Testing Platforms
Various tests using this code

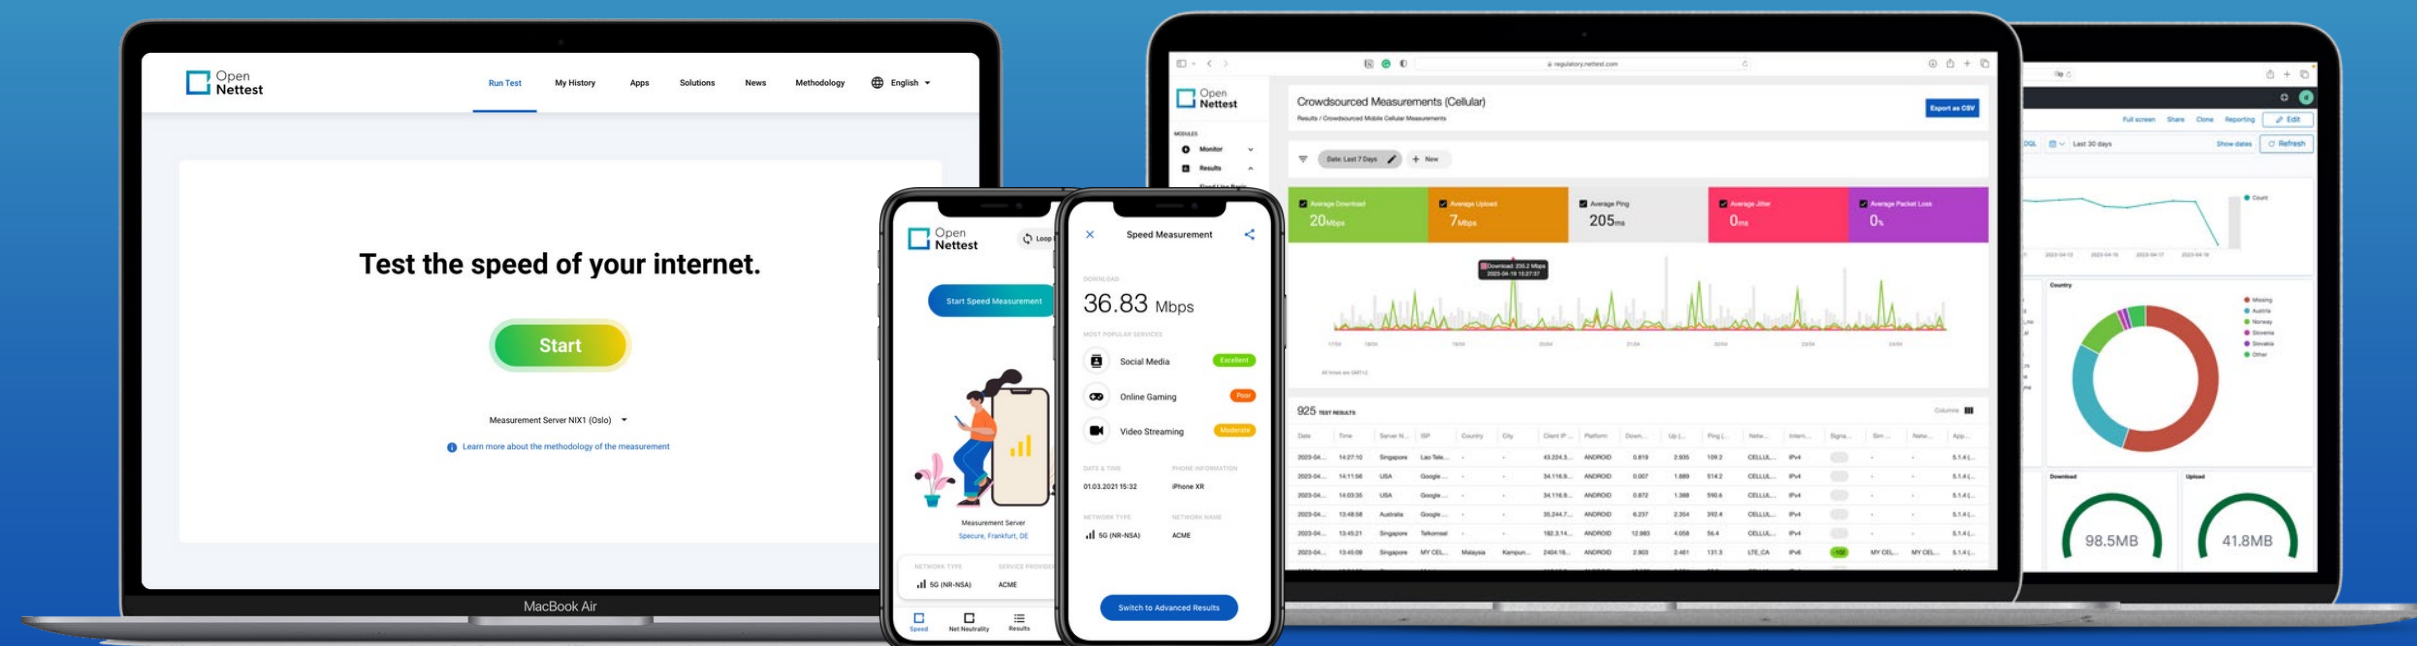

Country	Institution	Test Application
Austria	RTR	RTR NetzTest
Czech Republic	ČTÚ	ČTÚ- NetTest
Croatia	HAKOM	HAKOMe ta r Plus
Slovakia	RÚ	RU Mob ilTest
Serbia	RATEL	RATELNe tTe st
Norway	Nko m	Ne tfar t
Slovenia	AKOS	AKOS Te st Ne t
Luxembourg	ILR	che ckm yne t
Kosovo	ARKEP	ARKEP Ne tte st
Montenegro	EKIP	Nette st EKIP
Finland	Tra fic o m	Bittim itta ri.fi
Bulgaria	CRC	CRC QoS App
Switzerland	Ba kom / Ve re in QI	Networkte st.ch
Lithuania	RRT	ARKEP Ne tte st

What is Open Nettest?

A Standardized Solution for European Telecommunications Regulators

Open Nettest is a comprehensive suite of customizable open source tools, featuring consumer apps alongside the regulatory portal and dashboards.

Vision for Open Nettest

One speed measurement tool
to rule them all

**Multi-
platform**

**Open
Source**

Open Data

CLI

Optimizing the RMBT Protocol

Simplified Client and Server deployment

```
C:\WINDOWS\system32\cmd. x + v

Microsoft Windows [Version 10.0.26100.6584]
(c) Microsoft Corporation. Alle Rechte vorbehalten.

C:\Users\JozefSvrcek>nettest -s
Reading config from: "/etc/nettest.conf"
args: ["nettest", "-s"]
parse_listen_address: 5005
parse_listen_address: 443
```

```
C:\WINDOWS\system32\cmd. x + v

C:\Users\JozefSvrcek>nettest -c 127.0.0.1
Reading config from: "/etc/nettest.conf"

Nettest Broadband Test
```

Test Phase	Result
Ping Median	0.06 ms
Download Test	19.95 Gbit/s (19948.07 Mbit/s)

Coverage Obligations and their Verification

Signal Tracking with Open Nettest

Real - time Signal Monitoring

- Instant visibility into network strength and quality
- Precise GPS location correlation

Simple and Cost - efficient

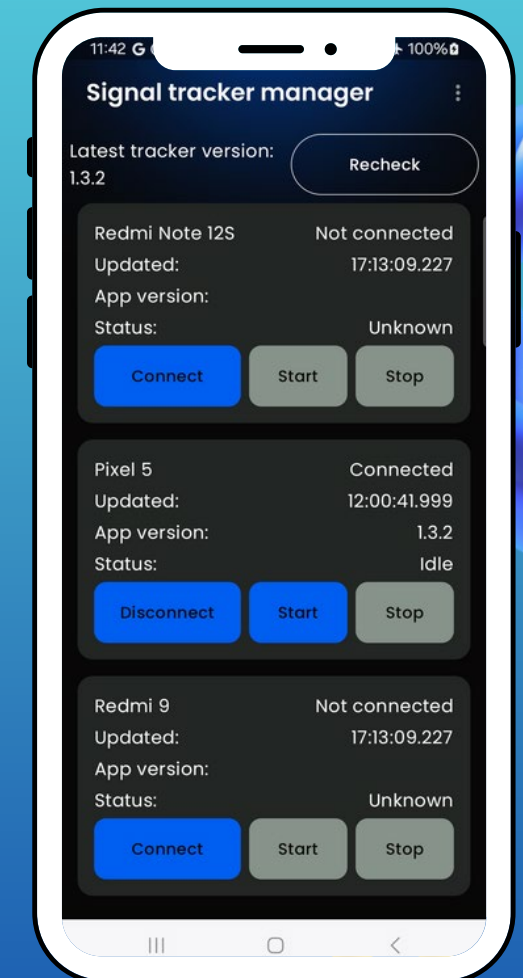

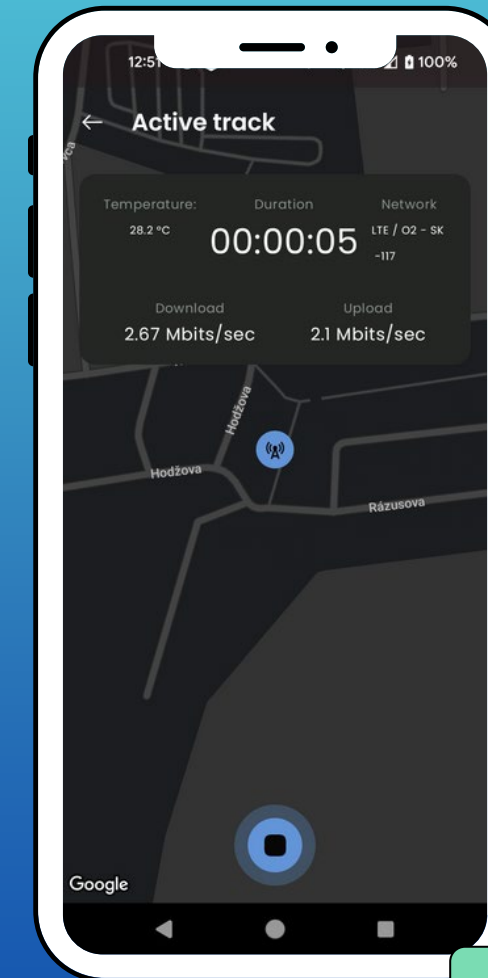

- Open source solution, freely available
- Works with regular Android phones
- Can be set up in minutes without any large investments

Comprehensive Data Collection and Analysis

- Upload/download speed measurements
- Network type and carrier information
- Device temperature monitoring
- CSV export for detailed analysis

Advanced Management Capabilities

- Multi - device management
- Remote control via Bluetooth
- Continuous monitoring of the measurements

Available at github.com/specure
under Apache 2.0 license

For consumers, Nettfart offers several critical advantages

- Free access to professional-grade internet testing tools
- Ability to verify contracted internet speeds
- Transparency in service delivery
- Contributing to national internet infrastructure improvement
- Access to historical and geographical comparison data

Customer Success Story 2

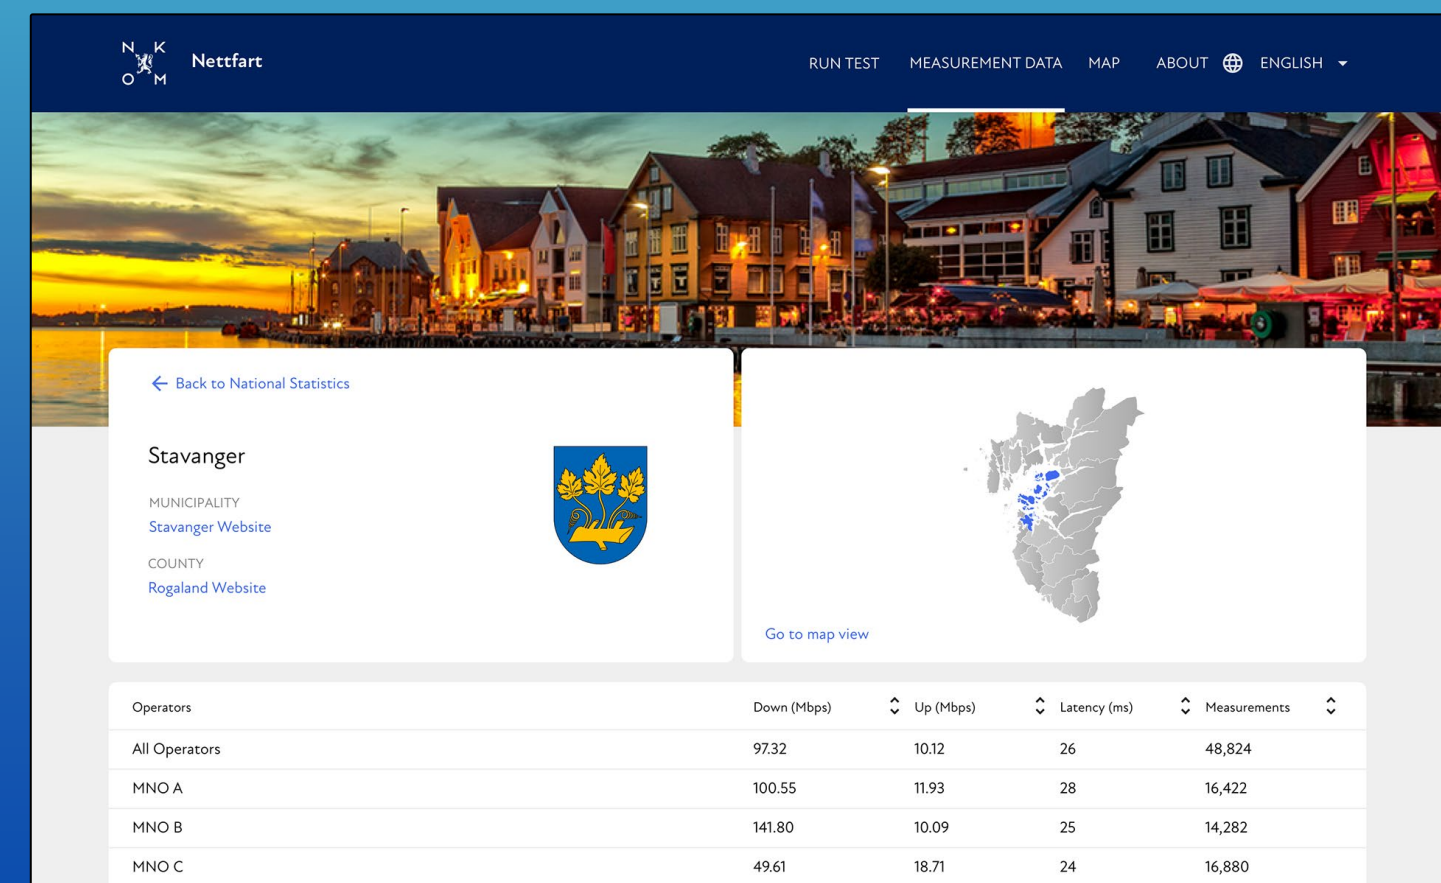

Internet Service Quality across Norway

Nettfart represents an innovative approach to Internet service monitoring by the Norwegian Communications Authority (Nkom). As a government - provided measurement tool, it empowers citizens to actively participate in tracking and improving Internet service quality across Norway.

Innovation in Public Service

What makes Nettfart innovative is its comprehensive approach to internet service measurement, combining traditional speed tests with advanced quality metrics and crowdsourced data collection. This citizen - centric platform transforms individual measurements into valuable public data, creating transparency in internet service delivery.
