

ITUEGTI

ITU Expert Group on Telecommunication/ICT Indicators

7. Future Work

14 September 2021 | 15:00-16:00 (CET)

EGTI future work:

- Create subgroup to review indicators collected in the LQ and re-visit how the number of households covered by a certain technology of fixed-broadband is measured (instead of numbers, collect % to improve comparability)
- Extension of mandate of 5G subgroup, to look at the implications for measuring IoT and M2M subscriptions
- OTT Subgroup: extend the mandate (to examine framework conditions for data collection, study technical aspects of OTT communications, taking into account the related work of other international organizations, evaluate the feasibility of data collection, to eventually define indicator(s) and, if possible, conduct data collection trials.) and invite EGH for a joint sub-group
- Create forum topic on IoT (topics other than 5G)
