

IMT Implementation in Tunisia, status report and future perspective,

Actual status in Tunisia

- Evolution of internet market (number of subscribers and users, consumption of bandwidth, etc.)
- Introduction of 3G and evolution of the market over this technology
- Comparison between ADSL access and 3G
- Conclusion: the customer need both quality and mobility: which technology can meet this goal

Implementation

For implementation and regardless of the strategy of the telecom operator we have to manage and reserve the necessary frequency resources in order to satisfy the future market:

- Actual status for the IMT bandwidth candidate: case of Tunisia
- Necessary arrangement (redevelopment of frequency bands and release of digital dividend)
- IMT license
- ...
