

BR IFIC 2786 – NEWS

The RS49 Wizard in the SpaceCap software, which has been used to create RS49 submissions, will be removed starting from version 7.1.4. This SpaceCap tool, which had to make use of SpaceQry or SNSonline plus a plugin (IWrocket) to generate a RS49 submission, is now obsolete. Its functionalities have been incorporated in the new RS49/552 Builder, with a simplified user interface, distributed with SpaceCap since version 7.1.2. This new tool also includes the functionality of capturing information as required by Res 552 (WRC-2012).

For more information on the new RS49/552 Builder, please refer to the corresponding Help file in the SpaceCap menu (Help -> New RS49/552 Builder).
