

GUIDE TO CAPTURE OF SERVICE AREA IN GIMS CONTAINING THE REGION NORTH OF X DEGREE LATITUDE

The following is a guide on how to prepare Service Area Diagram for the region North of a certain degree north latitude:

Step 1. Create new Service Area Diagram in GIMS software:

Step 2. In the top panel choose **Capture -> Service Region -> By Geographical Areas** :

Step 3. In the appeared window select XR1 and XR2 and click to the right arrow  :

Service Region Defined by Geog

Selected	
Code

ARM	
ARS	

Navigation buttons:   

Step 4. In order to limit selected areas by latitude, (e.g. north of 66.3°), change the minimum latitude in the field “Lat. Min” from -90 to 66.3 degrees and click “OK” button:

Service Region Defined by Geographical Areas

Selected Geographical Areas :

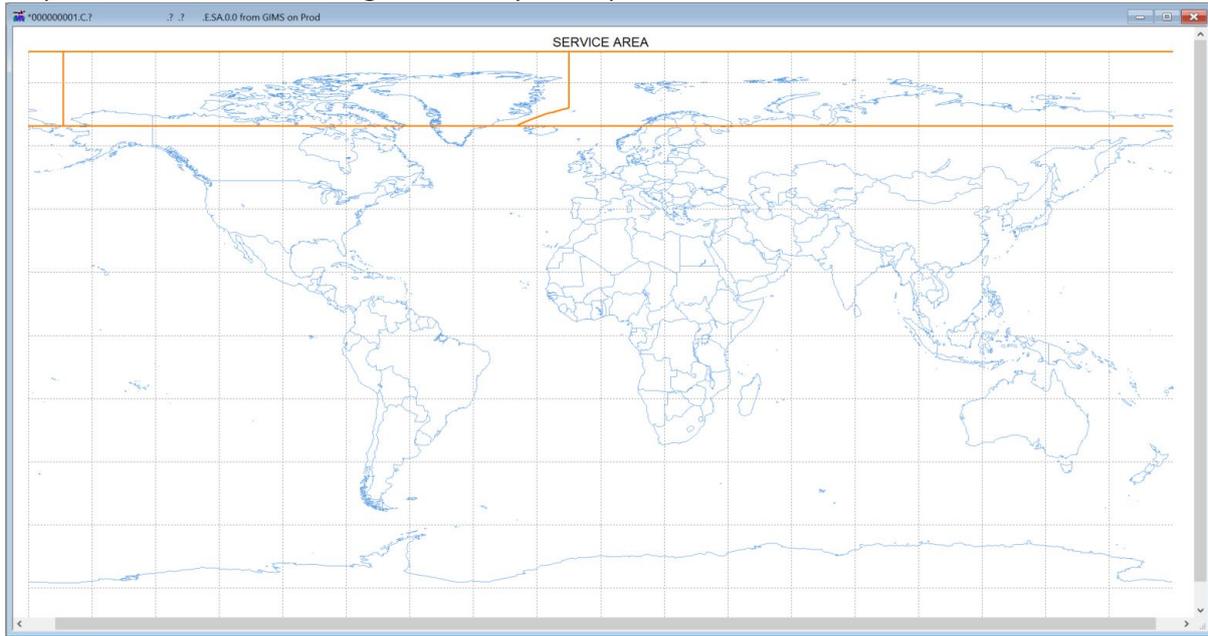

Code	ITU Region	Long. Min	Long. Max	Lat. Min	Lat. Max	EXCL.
XR2	2	164.9995	-9.9992	66.3	90	
XR1	1	-50.0009	-168.9742	66.3	90

5.389B
5.389F

OK Cancel

Step 5. Check that created diagram meets your requirements and save it:

Note that if the expected latitude is lower than 53.5545 degrees, as indicated below, it is necessary to also include the XR3 as part of the geographical service area:

Service Region Defined by Geographical Areas

Selected Geographical Areas :

Add from clipboard ▾

Code	ITU Region	Long. Min	Long. Max	Lat. Min	Lat. Max	EXCL.
XR3	3	44.0425	-119.9992	-90	53.5545	
XR2	2	164.9995	-9.9992	-90	90	
XR1	1	-50.0009	-168.9742	-90	90
