UNION AFRICAINE DES TÉLÉCOMMUNICATIONS

2nd frequency coordination meeting  
on the GE84 Plan Optimization for Africa  
Deuxième réunion de coordination des fréquences  
sur l'optimisation du Plan GE84 pour l'Afrique  
28 June - 2 July 2021

# Propagation model tools using Rec. ITU-R P.1812 and P.1546

By *Andrea Manara*  
**Broadcasting Service Division**

# Agenda

- **Short presentation**
  - **Rec. ITU-R P.1812 and P.1546 propagation models**
  - **eTools calculations (new P.1812 fs contours!)**
  - **Use cases**
- **Demonstration of propagation calculations in eTools**

# Comparison Rec. ITU-R P.1812 vs P.1546

Recommendation ITU-R P.1812-5  
(08/2019)

**A path-specific propagation prediction method for point-to-area terrestrial services in the VHF and UHF bands**

## **Deterministic model**

model all the physical phenomena which plays a role in VHF-UHF band

## **Path specific**

Uses terrain profile (elevation above mean sea level).

- 30 MHz - 3 GHz
- 0.25 km - 3000 km
- 1% < time < 50%
- 1% < locations < 99%
- Rx and Tx hgt agl <= 3km

Recommendation ITU-R P.1546-6  
(08/2019)

**Method for point-to-area predictions for terrestrial services in the frequency range 30 MHz to 4 000 MHz**

## **Empirical model**

based on extensive field measurements and statistical analysis

## **Path general**

The effect of terrain only via:

- Effective antenna height
- Clearance Angle correction
- Tropospheric scattering correction

- 30 MHz - 4 GHz
- 1 km - 1000 km
- 1% < time < 50%
- 1% < locations < 99%
- Rx and Tx hgt agl <= 3km

**Can be used for interference and coverage analyses!**

# Rec. ITU-R P. 1546

Field-strength curves as functions of *distance, antenna height, frequency and percentage time*

- Land, warm sea, cold sea
- 100, 600, 2000 MHz
- time percentage: 1,10,50

## Method

- interpolation/extrapolation
- mixed-path

Important correction for refractivity index!!

6

## Environment Type

# eTools: Input parameters

## ITU-R P.1812

### Clutter Type

#### Bug fix in P1812 software (June 21)

- Clutter is not considered any longer as eTools uses SRTM which considers already the clutter
- Previously eTools was overestimating the losses (attenuation) due to clutter considered twice

### Reception Type

— Field Strength (dB  $\mu$ V/m) — Terrain Altitude (meters above sea level)

Study FS variation on the path from TX to a RX point in the contours farthest from the TX in the P2A coverage analyses

# eTools: rec. ITU-R P.1546 calculations

## Point to Area

Tx (long)	<input type="text" value="420000"/>	Tx (lat)	<input type="text" value="411000"/>
Tx hgt agl(m)	<input type="text" value="70"/>	Rx hgt agl(m)	<input type="text" value="10"/>
Frequency(MHz)	<input type="text" value="186"/>	Erp(dBW)	<input type="text" value="30"/>
% of time	<input type="text" value="50"/>	% of location	<input type="text" value="50"/>
Environment type	<input type="text" value="Rural"/>		
Wanted FS (dB( $\mu$ V/m))	<input type="text" value="50"/>		

## Coverage analyses

Very good agreement with P.1812 results in this case.

But results can change significantly!

# eTools: rec. ITU-R P.1546 calculations

Tx (long)	<input type="text" value="0074408"/>	Tx (lat)	<input type="text" value="450227"/>	Environment type	<input type="text" value="Rural"/>
Tx hgt agl(m)	<input type="text" value="70"/>	Rx hgt agl(m)	<input type="text" value="10"/>	Wanted FS	<input type="text" value="20"/>
Frequency(MHz)	<input type="text" value="186"/>	Erp(dBW)	<input type="text" value="30"/>		
% of time	<input type="text" value="1"/>	% of location	<input type="text" value="50"/>		

**Point to Area**

Interference analyses

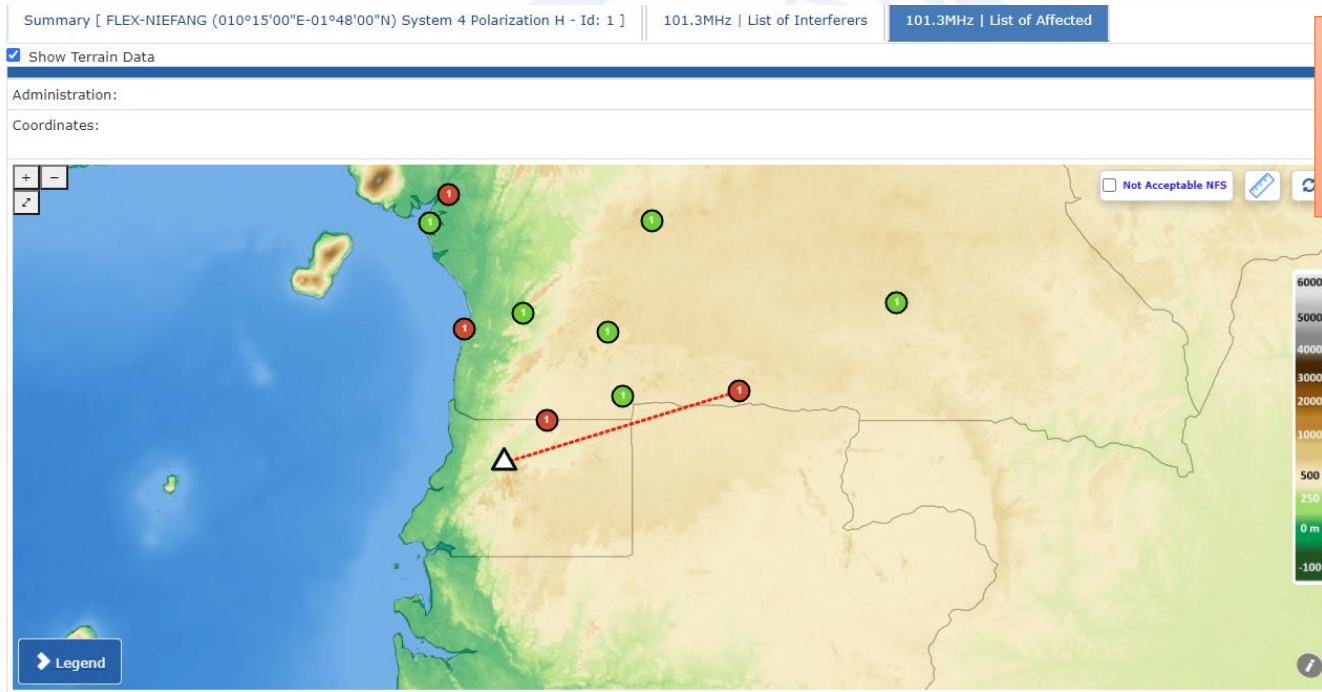

Very different results from P.1812!

# Use case: GE84 planning activities

eTools: GE84Opt

implements GE84 propagation curves for interference analyses.
