HEALTH IN THE SDG ERA

Tedros Adhanom Ghebreyesus  @DrTedros · 6h

Artificial intelligence plays a key role for health. Using [#AIforGood](#) is already improving people's health by helping paraplegic patients get improved mobility, making diagnosis faster, increasing road safety, forecasting outbreaks and more.

TECHNOLOGY

Visual understanding (e.g. dermatology, radiology, medical image analysis generally, autonomous vehicles)

Language understanding (e.g. chatbots, EHRs, understanding the entirety of the medical literature, health trends tracking)

Interpretation of complex biological, social, and environmental data (e.g. Robotics, Genetics, Behavioural)

INCENTIVES & CHALLENGES

Let's not kid ourselves...

How do we create the right incentive structures? Open data, open source?

What are “AI for good” models that are financially sustainable?
What are barriers to implementation?

Explainability? Algorithmic accountability? Bias?
