Conclusions & Challenges

- To resolve **interoperability issues** raised by developing countries , it is effective to have **interoperability events** including tests and workshops.
- The **interoperability tests** should be based on ITU-T Recommendations, and it is a pragmatic way to achieve by regional SDOs. Such a **global interoperability event** provides good opportunities to resolve the issues for both of developed and developing countries in APT region.
- This **new collaboration framework** such as the **interoperability events** will foster mutual understanding and cooperation among regional/national SDOs .
- HATS will be able to take a certain role in the framework through its experiences.

Thank You!
