## Outline

1. Background
  - Progress of optical broadband service
  - EPON standard and issue
  - System level EPON standards
2. G.epon/SIEPON standards
3. Activity for interoperability tests and optical access showcase
4. Formation of WG with related organization
5. Conclusion

## Progress of optical broadband (FTTH) service

Ministry of Internal  
Affairs and Communications  
HATS

- FTTH service based on PON system has become popular.
- Especially, EPON has been used widely in Japan.

ANSL

## EPON standard and issue

Ministry of Internal  
Affairs and Communications  
HATS

- Ethernet based PON was standardized by IEEE.
  - To realize 10Gbps high-speed access network
  - Enabling broadband applications such as Bi-directional Super High Definition Video, Remote Education, Remote Healthcare, etc.
- However that standardization was limited in PHY and MAC layer thus preventing EPON interoperability.

ANSL

## System level EPON standard

- ✓ In order to improve EPON interoperability, a system level EPON standardization started in IEEE P1904.1 SIEPON (Service Interoperability in EPON) WG since 2010 and it was approved in June 2013.  
<http://grouper.ieee.org/groups/1904/1/>
- ✓ SIEPON WG plans to conduct its Conformance Test and issue Certificates (SIEPON Certificate Program).
- ✓ Moreover, SIEPON Package B, which is one of SIEPON specifications based on Japan specifications, was consented as ITU-T G.epon (G.9801) in July 2013.

➤ In order to promote EPON interoperability, HATS conference organized Optical Access Ad-hoc WG.

## Outline

1. Background
2. G.epon/SIEPON standards
  - G.epon/SIEPON standards
  - SIEPON standard packages
  - Added Specifications for G.epon/SIEPON standards
  - Architecture model for G.epon/SIEPON
  - Logical connection model for G.epon/SIEPON
  - Related EPON standards
3. Activity for interoperability tests and optical access showcase
4. Formation of WG with related organization
5. Conclusion

## Added Specifications for G.epon/SIEPON standards

NTT  
NTT Access Network Service Systems Laboratories

| Items              | Main specifications   | Remarks                            |
|--------------------|---|------------------------------------|
| Client Management  | Encryption/Authentication, Protection, Power saving, Service management, System monitoring              |                                    |
| OAM client         | OAM discovery, Alarm handling, Statistical information processing (Surveillance)                        | Surveillance and control functions |
| MAC client         | Queue control, Priority control, Policing, etc.   | Main signal control functions      |
| MAC control client | Bandwidth control (assignment), Report generation/handling, Gate generation/handling, Discovery control | PON access control functions       |

## Architecture model for G.epon/SIEPON

NTT  
NTT Access Network Service Systems Laboratories

### Line-OLT/ONU

- Function blocks defined by IEEE 802.3

### Client-OLT/ONU

- General function blocks provided by PON ASIC chips

### Service-OLT/ONU

- Products provided by system vendors

- Coverage of ITU-T G.epon/ IEEE Std 1904.1
- Coverage of IEEE Std 802.3

10

ANSL

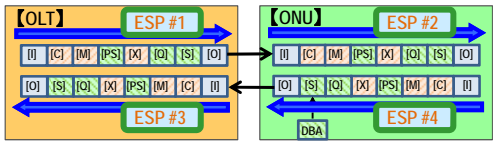

### Logical connection model for G.epon/SIEPON

- EPON Service Path(ESP)**
  - ESP is a unidirectional virtual path providing a connection and “QoS” in a service.
  - ESP abstracts differences between implementation such as single and multiple LLID implementation in an ONU.

- An example of ESP
  - Bidirectional unicast

## Intention of G.epon/SIEPON system interoperability

➤ Ensure operators to deploy G.epon/SIEPON package B compliant system under multiple vendors' environment.

➤ Any countries' operators can utilize the highly matured Japanese optical access technology for their telecommunication infrastructure.

```

graph LR
    A[Experience of Optical Access in Japan] --> B((SYSTEM LEVEL STANDARD

HATS Optical Access Ad-hoc WG  
Pilot Test etc.))
    C -- Feedback --> B
    C --> D[Your PON System Deployment]
  
```

➤ Optical access Ad-hoc WG

- Performs IOP verification under multiple vendors' environment
  - In order to ensure interoperability of G.epon/SIEPON compliant equipment
- Considers and extract issues for conducting conformance and interoperability tests in Japan.
- Feeds back WG results and achievements to related standards.

## Formation of WG with related organizations

- Optical Access Ad-hoc WG conducts Conformance and Interoperability Test for G.epon/SIEPON compliant devices.
- WG collaborates with TTC and seeks the way to collaborate with IEEE SIEPON Certification Program in order to create some Test cases for Conformance and Interoperability Test.
- WG also consider the promotion of harmonization with ITU-T/ASTAP for global promotion of G.epon/SIEPON

**IEEE SIEPON Certification Program**

- Conduct conformance Test and issue Certificate
- Test lab (No in Japan)
- Conduct SIEPON Conformance Test

**Vendors**

- A
- B
- C

**IOP Test Program**

- Conduct IOP test for SIEPON equipment with SIPON Certificate
- Create IOP test guideline
- Global Promotion of SIEPN equipment
- HATS Conference Optical Access Ad-hoc WG
- TTC

**Operators**

- A
- B
- C
- Support for IOP Test
- Provide Test machine
- Use of Test results

**G.epon Interoperability Test**

- Harmonization with ITU-T/ASTAP
- D
- G.epon Conformance and IOP test program
- Conduct Conformance and IOP tests using G.epon Implementers' guide
- Creation of IOP test guideline and global promotion G.epon equipment

## Conclusion

- Presented
  - EPON standard and its issue
  - Demand for System level EPON standards
- Explained outline of G.epon/SIEPON standards
  - Difference between G.epon and SIEPON
  - Some features of G.epon/SIEPON
- Introduced
  - Our activity of interoperability tests in Japan for G.epon/SIEPON compliant equipment under multiple vendors' environment.
  - 2nd pilot test for ITU/APT C&I event using 1:n OLT-ONU connection configuration.
  - The demonstration system for Optical Access Showcase
- HATS optical access Ad-hoc WG consider
  - the promotion of harmonization with related organization, especially ITU-T/ASTAP in order to promote G.epon/SIEPON compliant system via some C&I event.
