

# Completing the automotive connectivity fabric

**KYMETA™**

Explosive growth in mobile broadband

Under-used LCD Production Capacity

> \$256 B invested

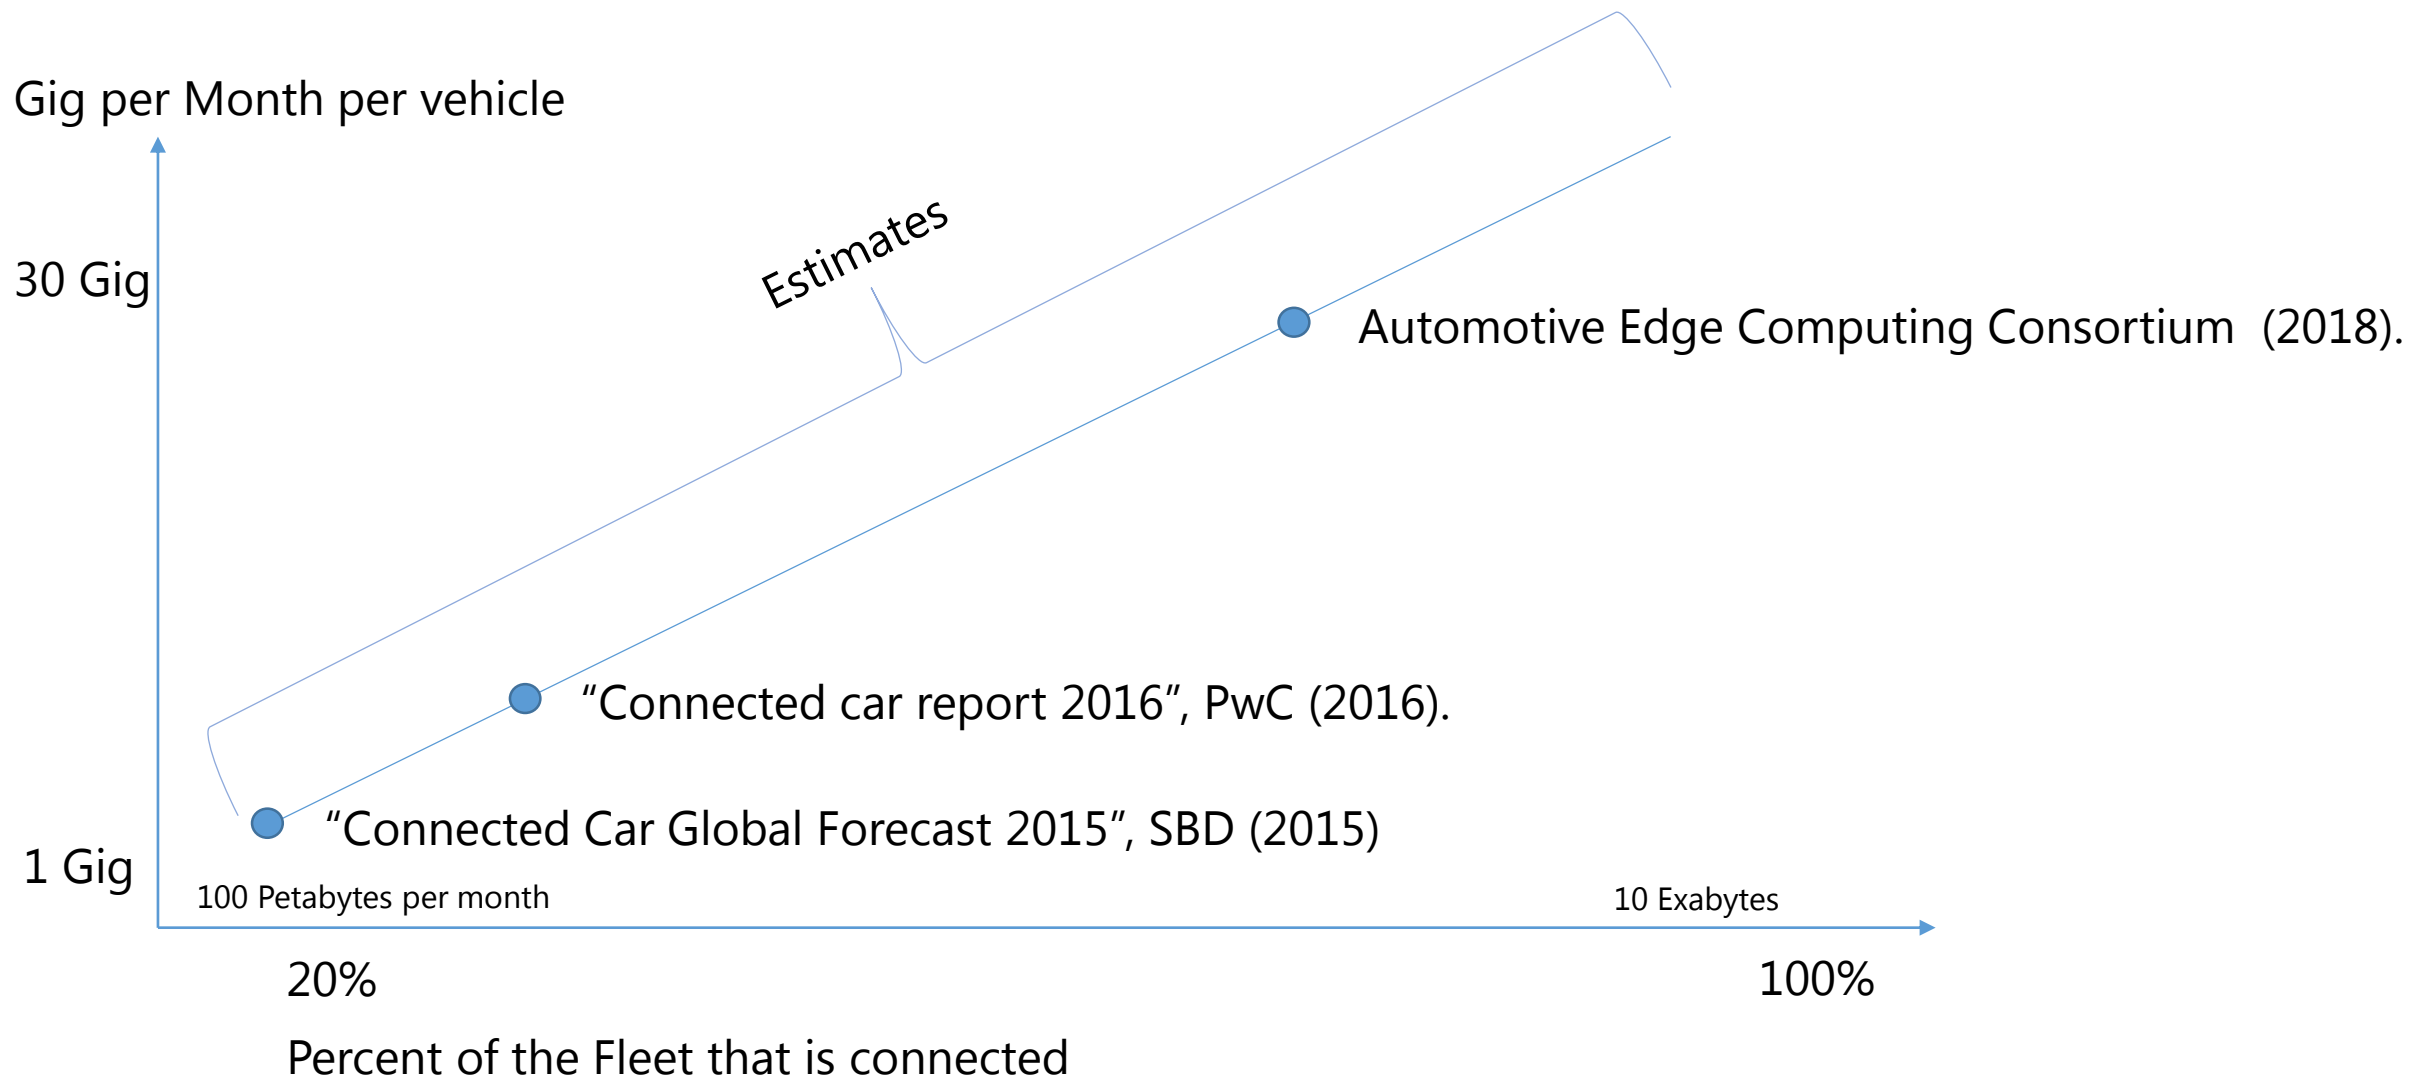

Cone of consumer electronics

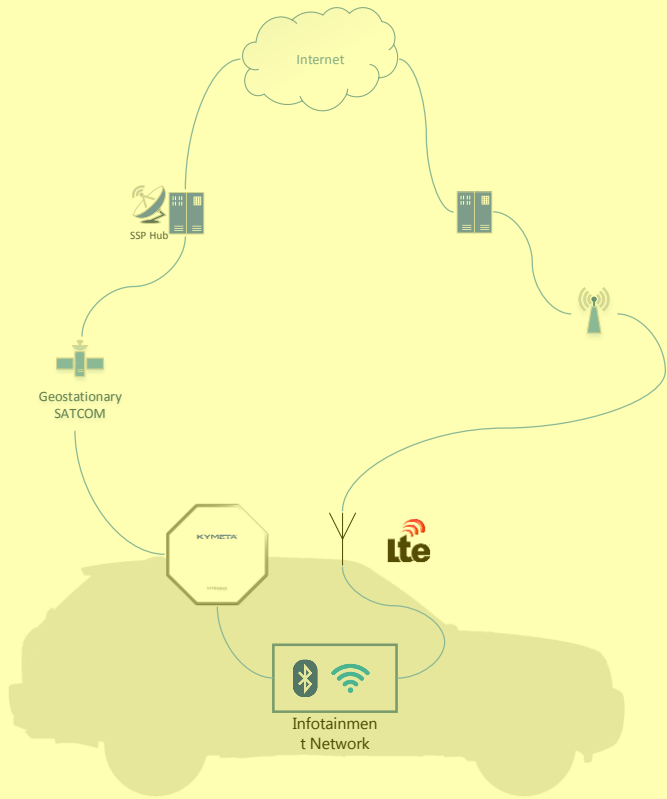

200+ Patents

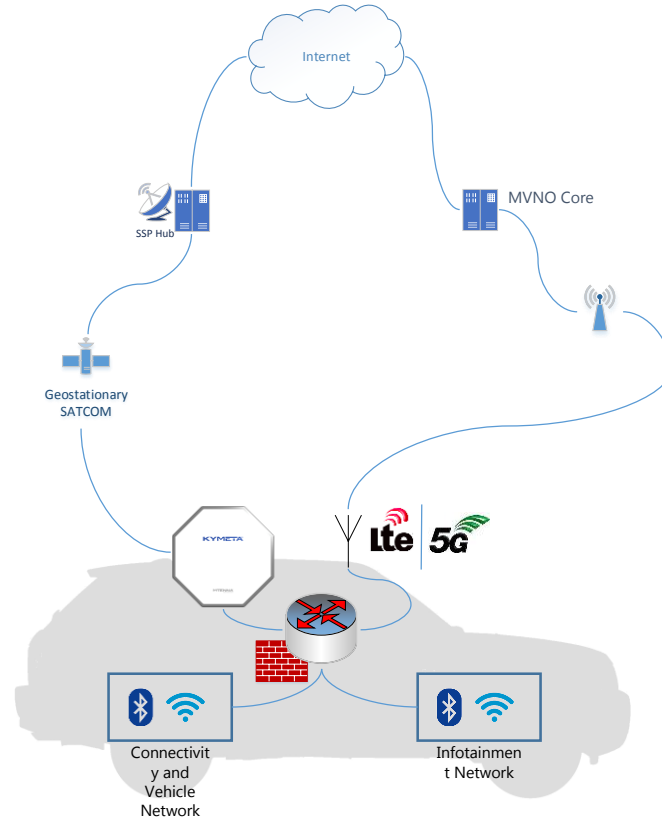

# Data volume in and out of the vehicle in 2025

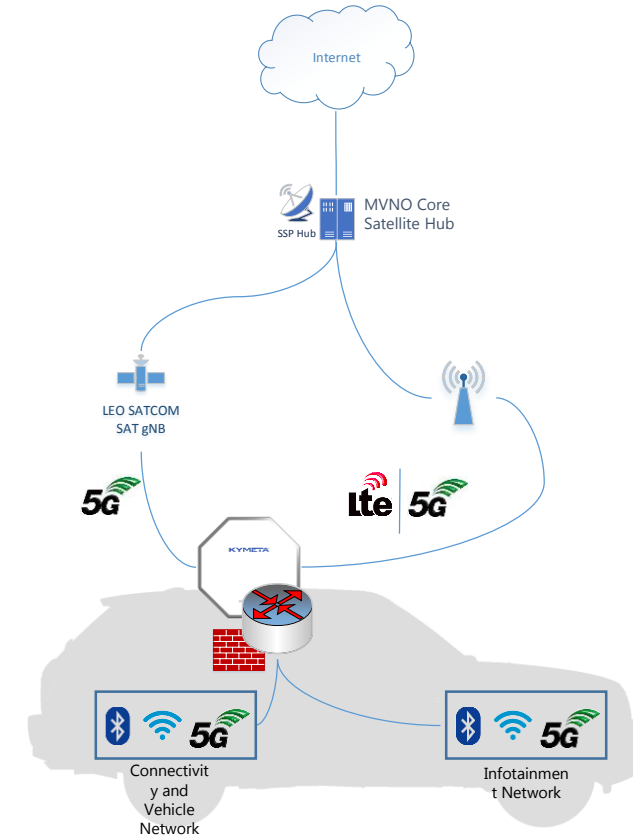

### Phase 1

- Satellite backhaul directly interfaced with vehicle infotainment network
- Provides failover connection when LTE is not available

### Phase 2

- LTE and 5G from vehicle chipset
- LTE, 5G, and Satellite backhaul is controlled via cognitive router
- Router selects best cost routing option given the environment
- Infotainment and C&V networks take advantage of hybrid backhaul
- Layer-2+ security isolates C&V network from infotainment network

### Phase 3

- 5G over Terrestrial or SATCOM
- Routing becomes fully software defined and is integrated in Kymeta terminal
- Kymeta terminal contains 5G and LTE chipset
- Vehicle Backhaul System becomes satellite-enabled relay UE
- C&V network takes advantage of 5G uMTC, V2X, mMTC
- Infotainment network relays 5G or provides connectivity on BT or Wi-Fi

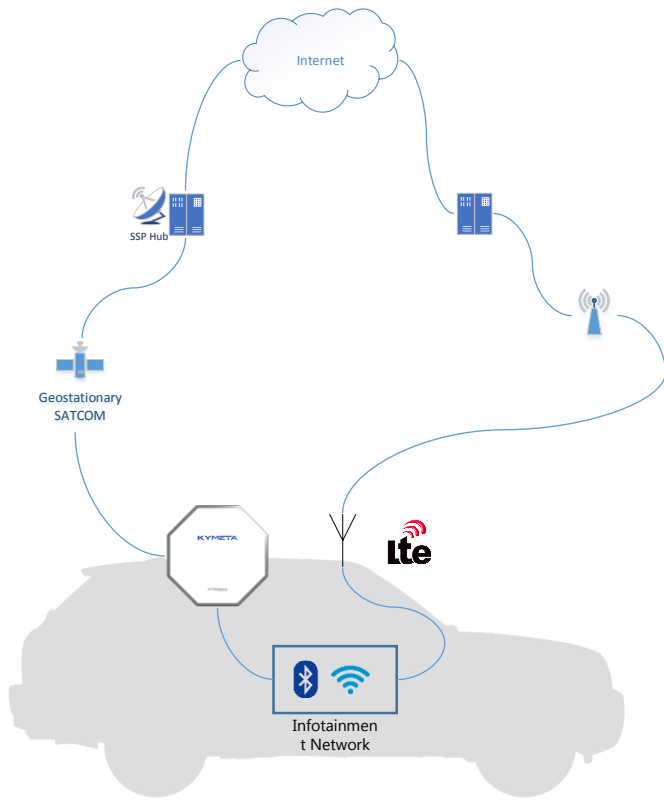

**Phase 1 (Fall 2017):**

Switch between Terrestrial  
and Geosynchronous Satellite with  
JSAT in Japan

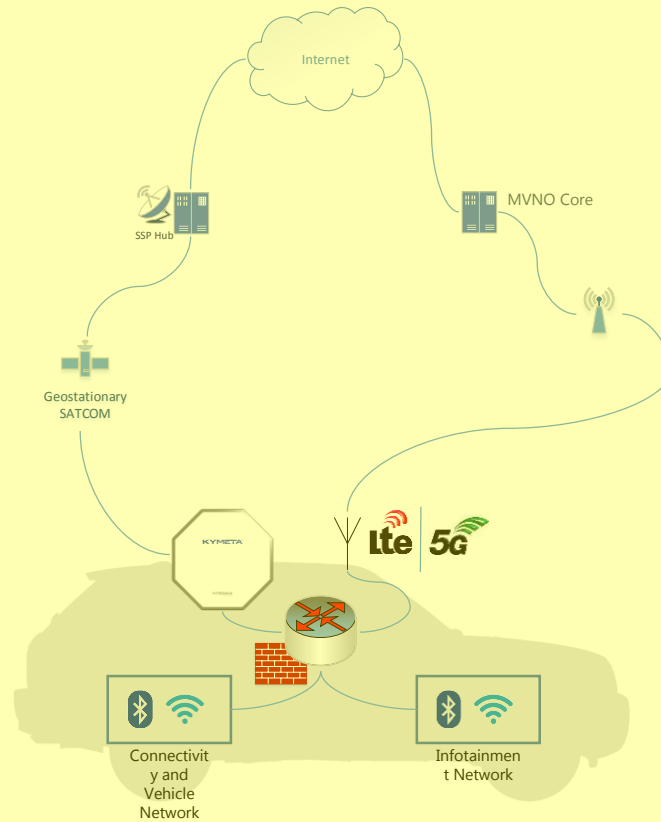

# Seamless switching between satellite and cellular

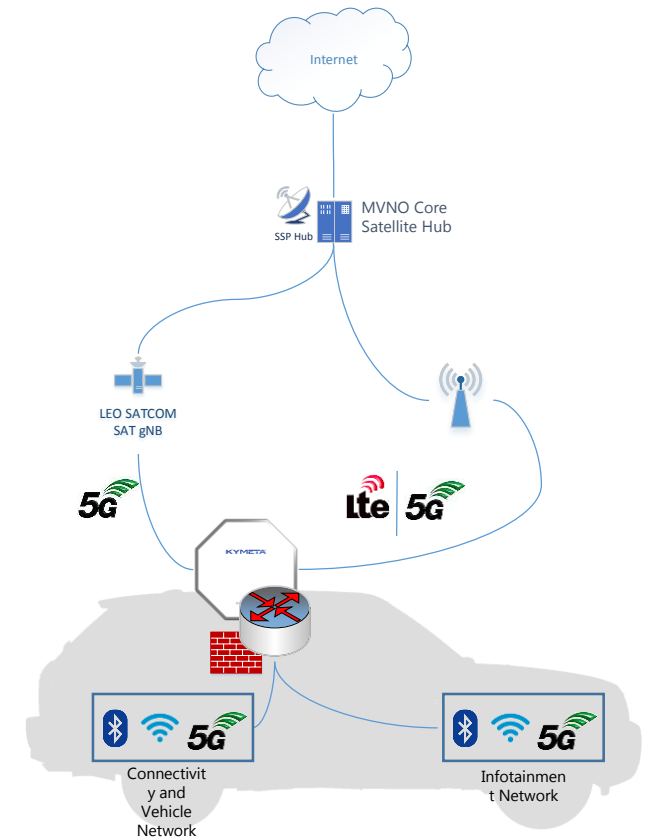

### Phase 1

- Satellite backhaul directly interfaced with vehicle infotainment network
- Provides failover connection when LTE is not available

### Phase 2

- LTE and 5G from vehicle chipset
- LTE, 5G, and Satellite backhaul is controlled via cognitive router
- Router selects best cost routing option given the environment
- Infotainment and C&V networks take advantage of hybrid backhaul
- Layer-2+ security isolates C&V network from infotainment network

### Phase 3

- 5G over Terrestrial or SATCOM
- Routing becomes fully software defined and is integrated in Kymeta terminal
- Kymeta terminal contains 5G and LTE chipset
- Vehicle Backhaul System becomes satellite-enabled relay UE
- C&V network takes advantage of 5G uMTC, V2X, mMTC
- Infotainment network relays 5G or provides connectivity on BT or Wi-Fi

# Phase 2: LTE, satellite integration for public safety

# Phase 2: LTE, satellite integration for platform APIs

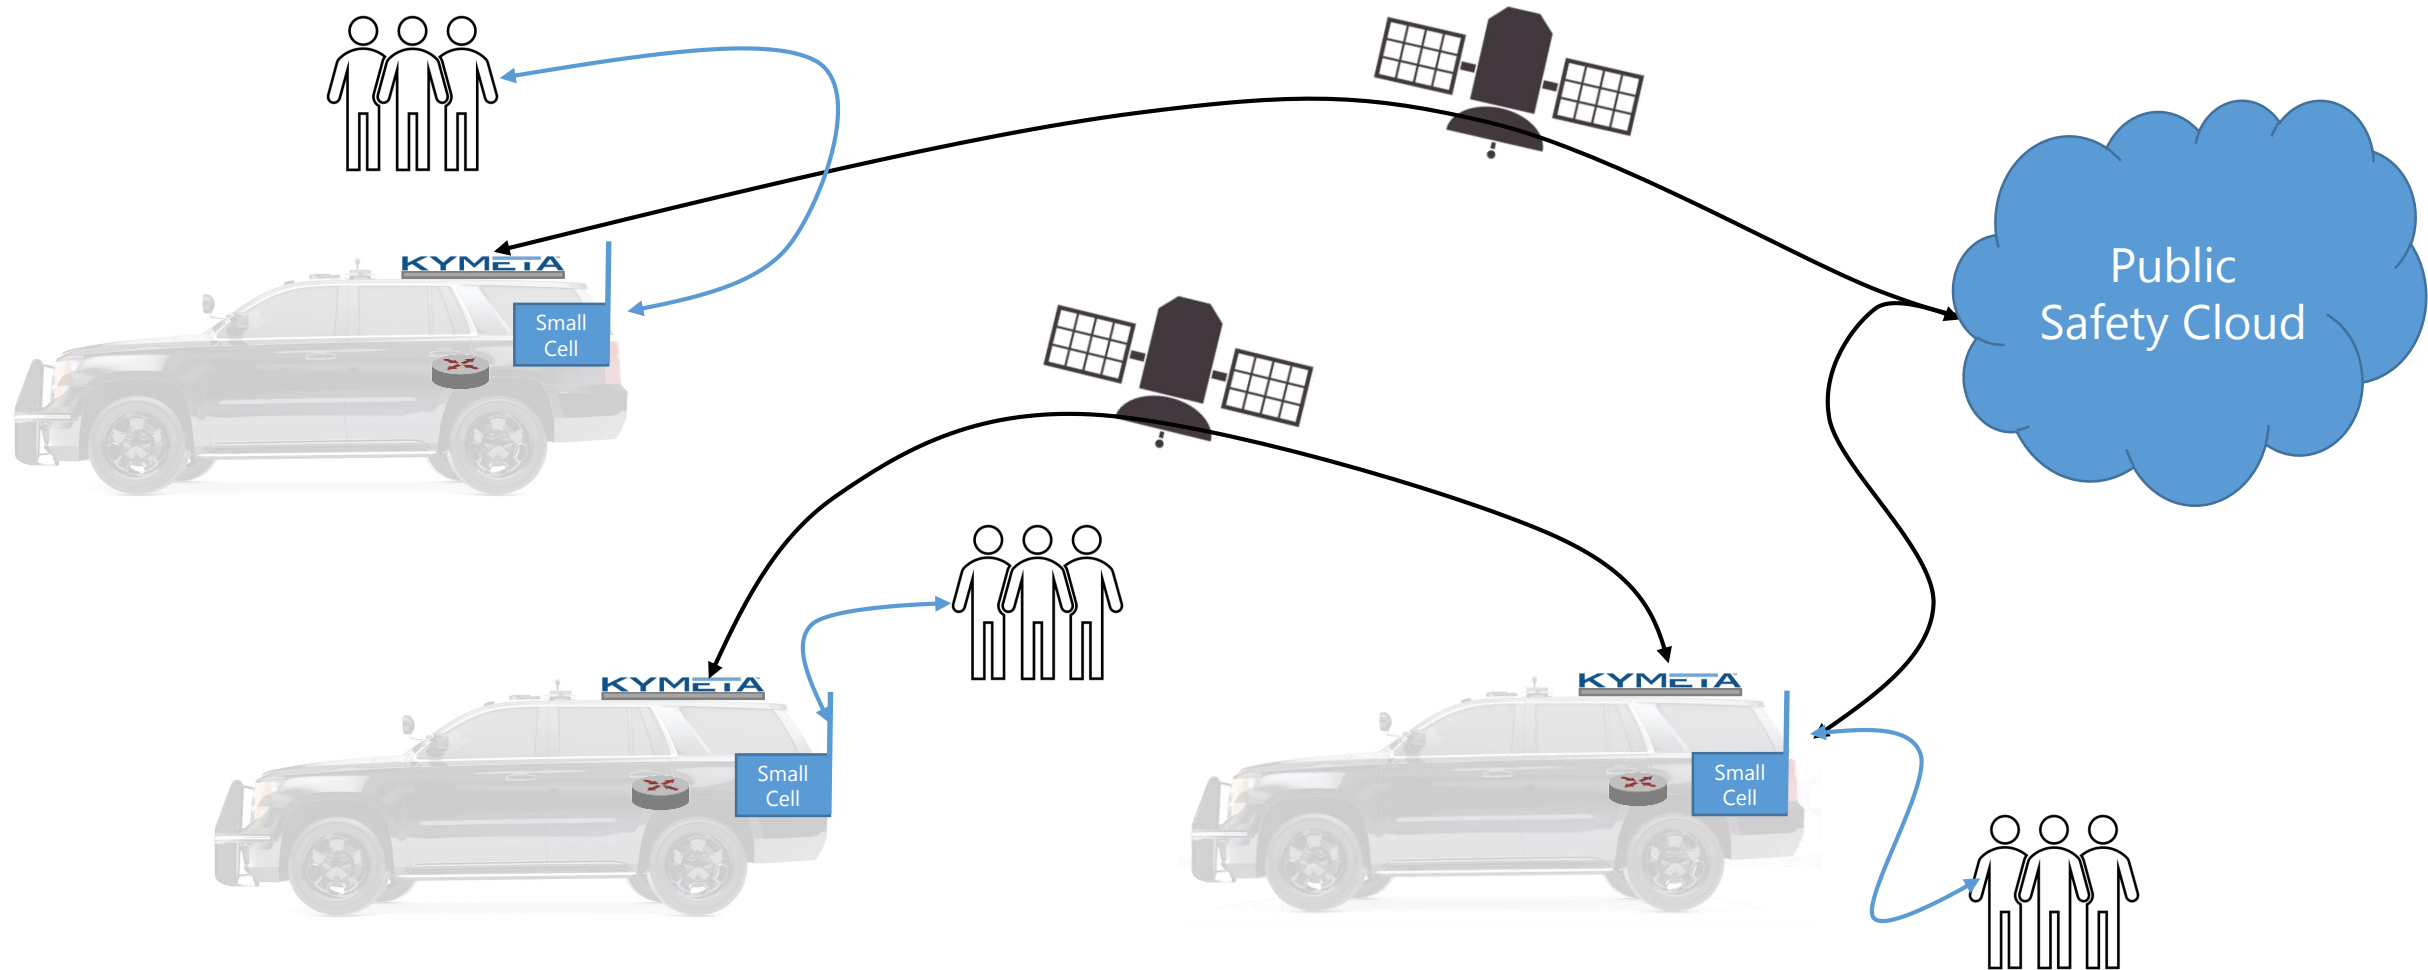

KYMETA™

MTENNA

**KYMETA™**  
GOVERNMENT SOLUTIONS

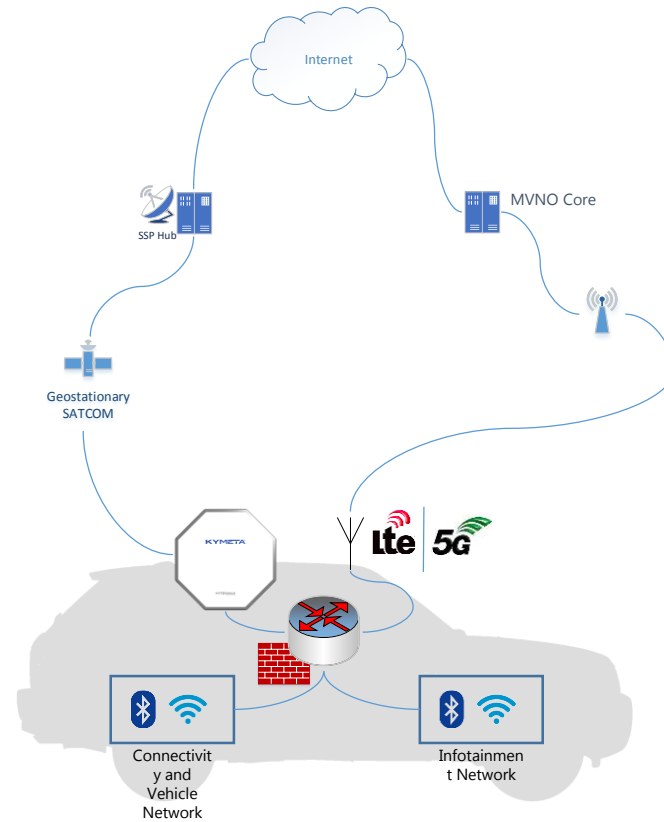

# Rapidly deployable and always connected
