Title: CyberCop: AI is the cyber warrior

Abstract:

The need for cybersecurity is growing at an exponential rate as the attack options come from an ever increasing channels of attack. Thus, artificial intelligence (AI) provides a solid opportunity to keep up, and perhaps even, outpace the rapid growth of cyber threats. However, we also need to be careful in that AI could be weaponized as a cyber threat. In this presentation, we will explore these issues and learn what how we can create effective practices and policies to promote social good with cybersecurity and AI.
