

Title: BERECs Network Neutrality Measurement Methodology, and how it supports the EU’s “Open Internet” regulation 2015/2120 (AKA Net Neutrality)

Abstract

This presentation will aim to provide an overview of the EU Network Neutrality regulation, and BERECs role in its interpretation. BEREC has published a number of documents in this area in recent years, including the Network Neutrality Regulatory Assessment Methodology which contains recommendations for how an NRA might implement QoS test functions to measure the QoS provided to an end user, and ultimately validate the transparency measures as described in the regulation.
