

Case study: Numbering and dialling plans for France

and how they fit into the international numbering plan

Orange Labs

Philippe Fouquart, Orange expert

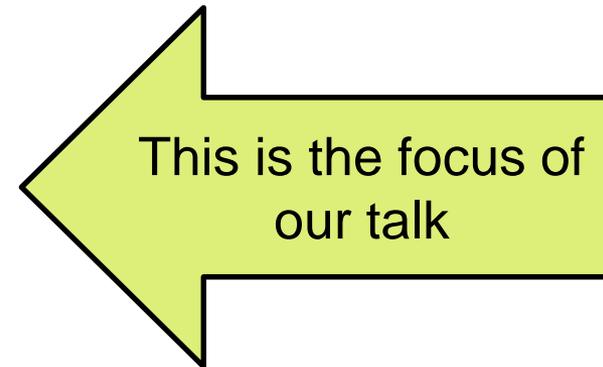

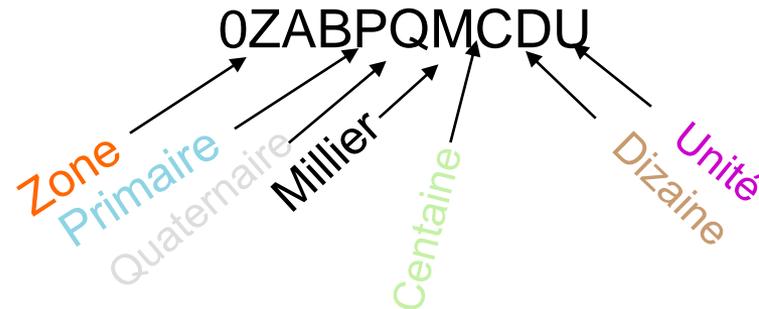

Overview

- The presentation provides an overview of the dialling and numbering plan of France and the E.212 identification plan
- It is essentially about the E.164 structure and how it can be changed
- **The presentation is intended to:**
 - 1. Provide basic notions of the dialling/numbering plan for France**
 - 2. Describes where it comes from, the changes it went through and how it relates to the international numbering plan**
- Other topics such as policies, tariffs, portability, fees, customer protection.... are not addressed here – but questions are welcome during the interactive session

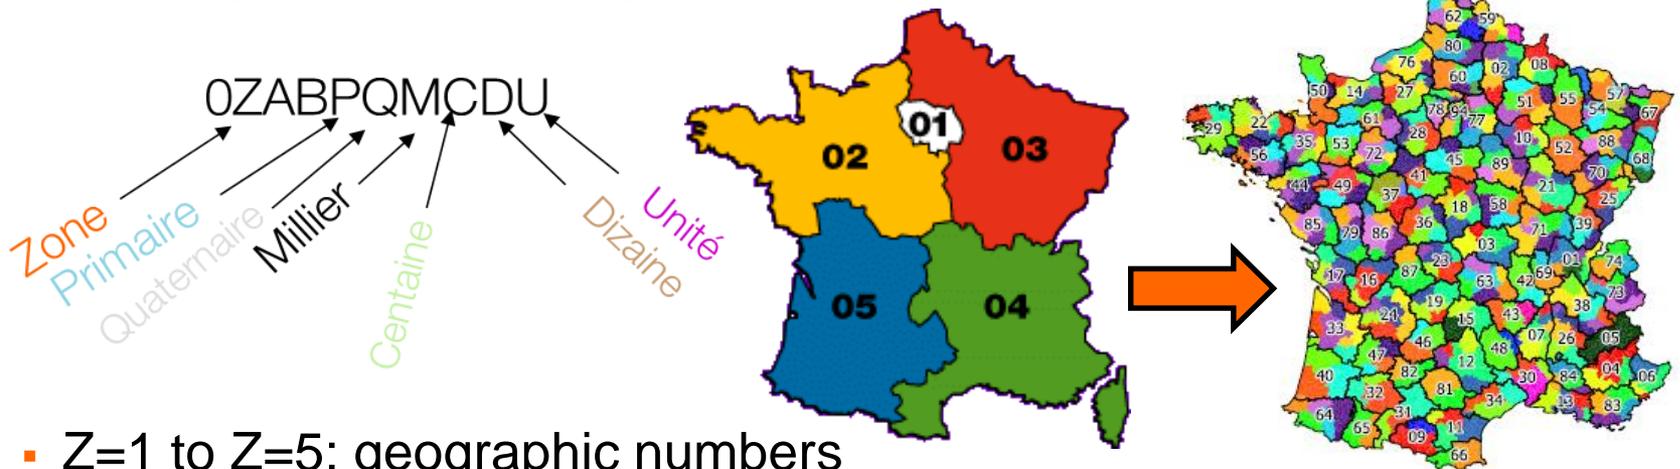

Dialling plan overview

- The dialling plan of France is a 10 digit plan generally represented as

- **Short codes:**
 - 3BPQ (added value services)
 - 118XYZ (directory services)
- **Emergency numbers:** 112, 15 (ambulance), 17 (Police), 18 (fire brigade), 114 (emergency SMS), 115 (« social urgency »), 116 000 : missing children hotline, 116 111 (child helplines), 116 117 (non-emergency medical number), 119 : Emotional support child helpline, 191 (Air transport hotline), 196 (Maritime rescue hotline), 197 : "red alert«
- **Operator services:** 10XY
- **Carrier selection codes:** 16XY or "E" (instead of national prefix 0)

Dialling plan – 10 digit numbers

Source:arcep.fr

- Z=1 to Z=5: geographic numbers
 - More than 500 basic geographic zones called Zone de Numérotation Elementaires (overseas departments not shown)
 - National location portability to be introduced soon
- Z=6 and 7: mobile numbers
 - Including M2M, roaming numbers, portability prefixes
 - Exception M2M numbers are 14 digit in length
- Z=8 added value services including freephone, shared cost/revenue, premium rates
- Z=9 non geographic national numbers (in general VoIP)

1. International context of the E.164 numbering plan

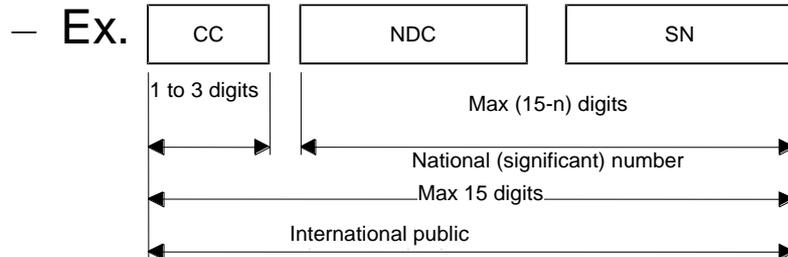

Orange Expert
Future
networks

Le plan de numérotage international E.164

- E.164 is both

- A **format** defined by the recommendation...

- ... and **values** allocated/assigned in a tree-like structure

- CC (country codes) assigned by the ITU

- To Member States eg Brazil 55, and administered by administrations or private entities through delegations

- To the ITU itself and administered directly by the ITU eg 800, 882883...

- NDC/SN assigned by Member States (or by delegation) in ranges generally

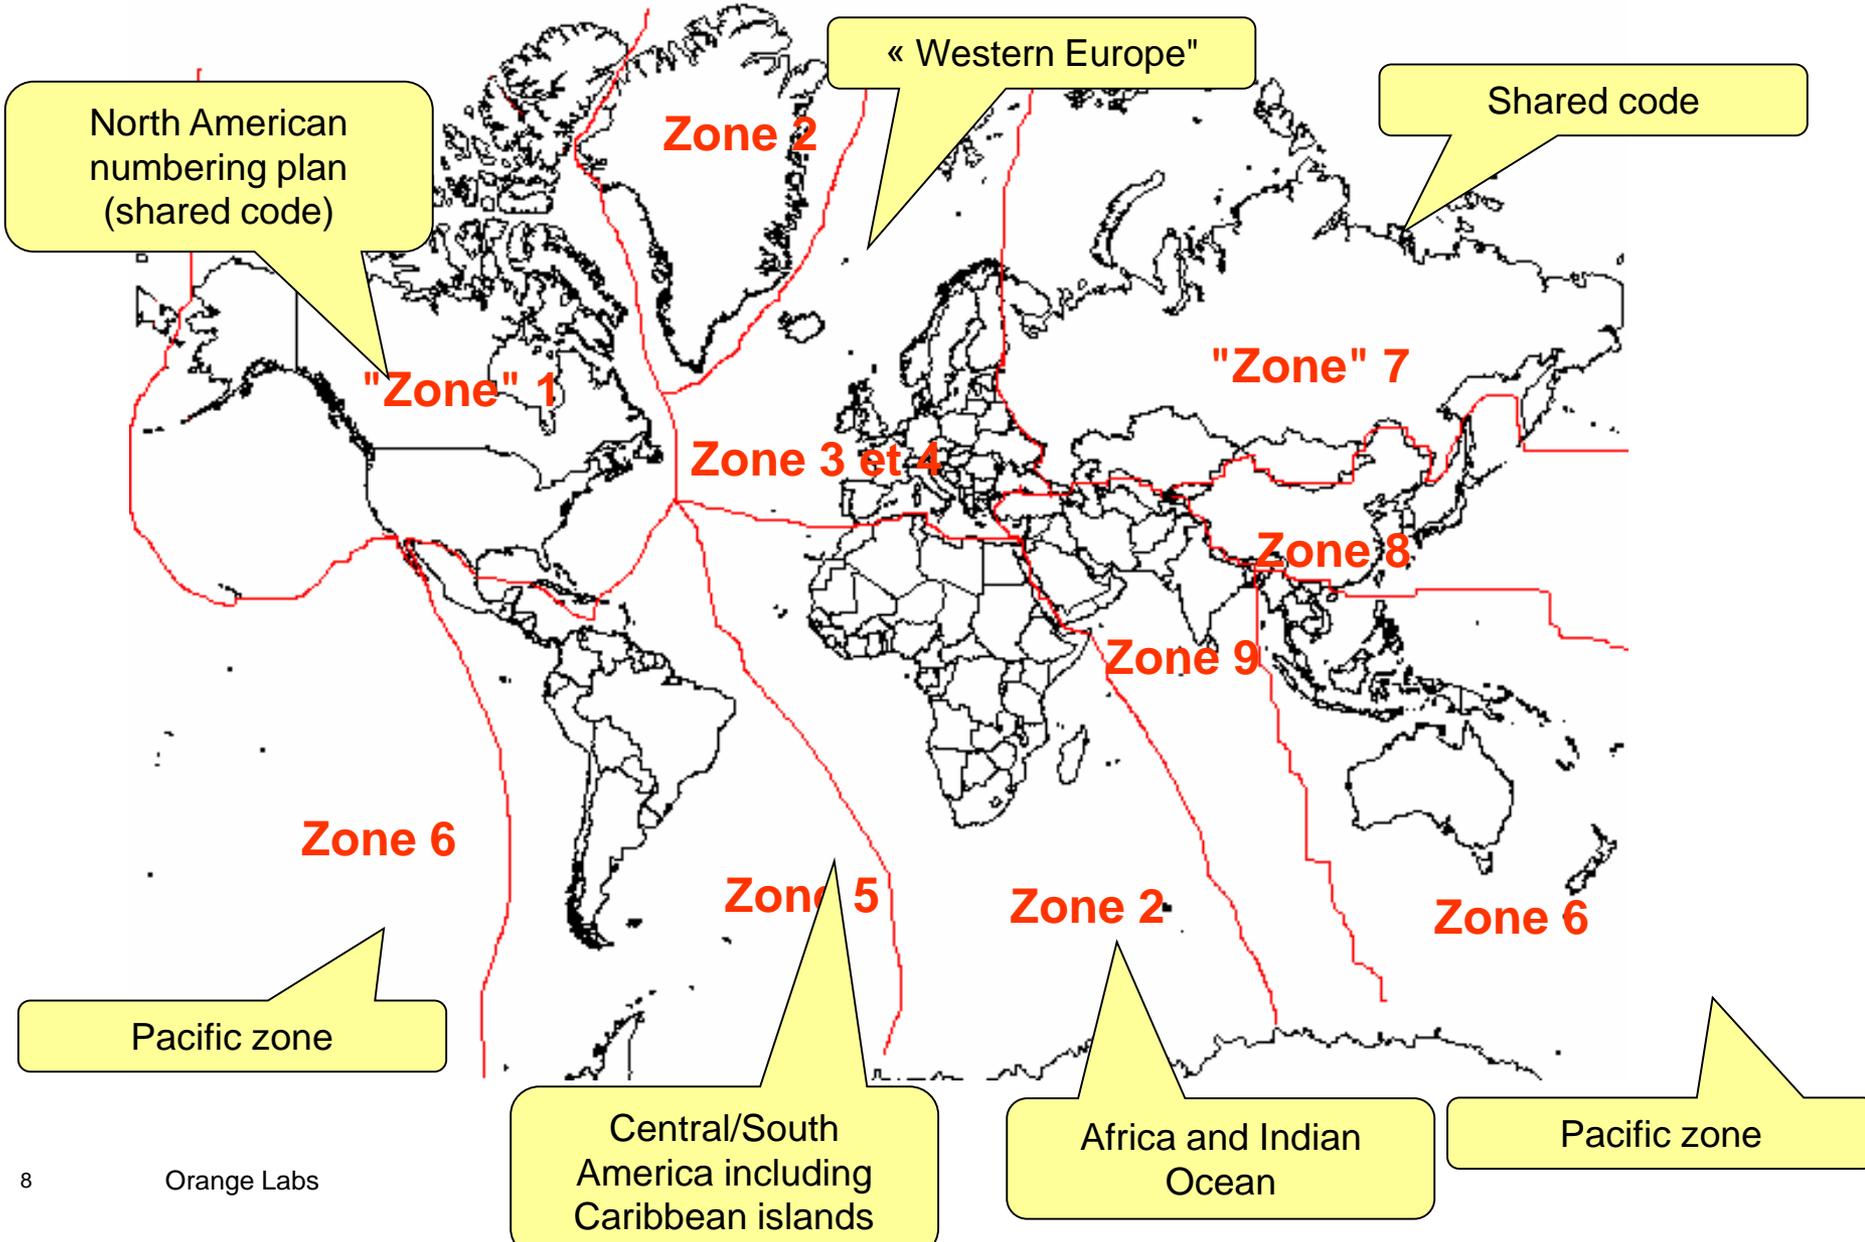

- SN assigned by service providers (operators, third parties...)

- Country Codes are both a geographic and tariff " marker"

General structure of the "French E.164 plan"

- The E.164 plan(s) consist of number of the form:
 - 9 (few), 11 (most), 12 (some) and 15 (few) digits
 - Generally noted I1I2(I3)(ZAB)PQMCDU(xyz)
- Also known as « E.164 numbering plan"...
 - So only « long » numbers belong to the E.164 numbering plan
 - Short numbers/codes, special numbers are not part of the international numbering plan
 - And as a result they cannot be dialled from abroad
 - Some numbers can't be dialled but are part of the E.164 numbering plan nonetheless
 - Ranges dedicated to mobile roaming belong the E.164 numbering plan ("MSRN")
 - *It's not because it's a valid number that it's routable/reachable*
- The breakout/structure between national and international is the result of a number successive decisions of (re)structuring the plan

Historic distribution of the E.164 numbering plan

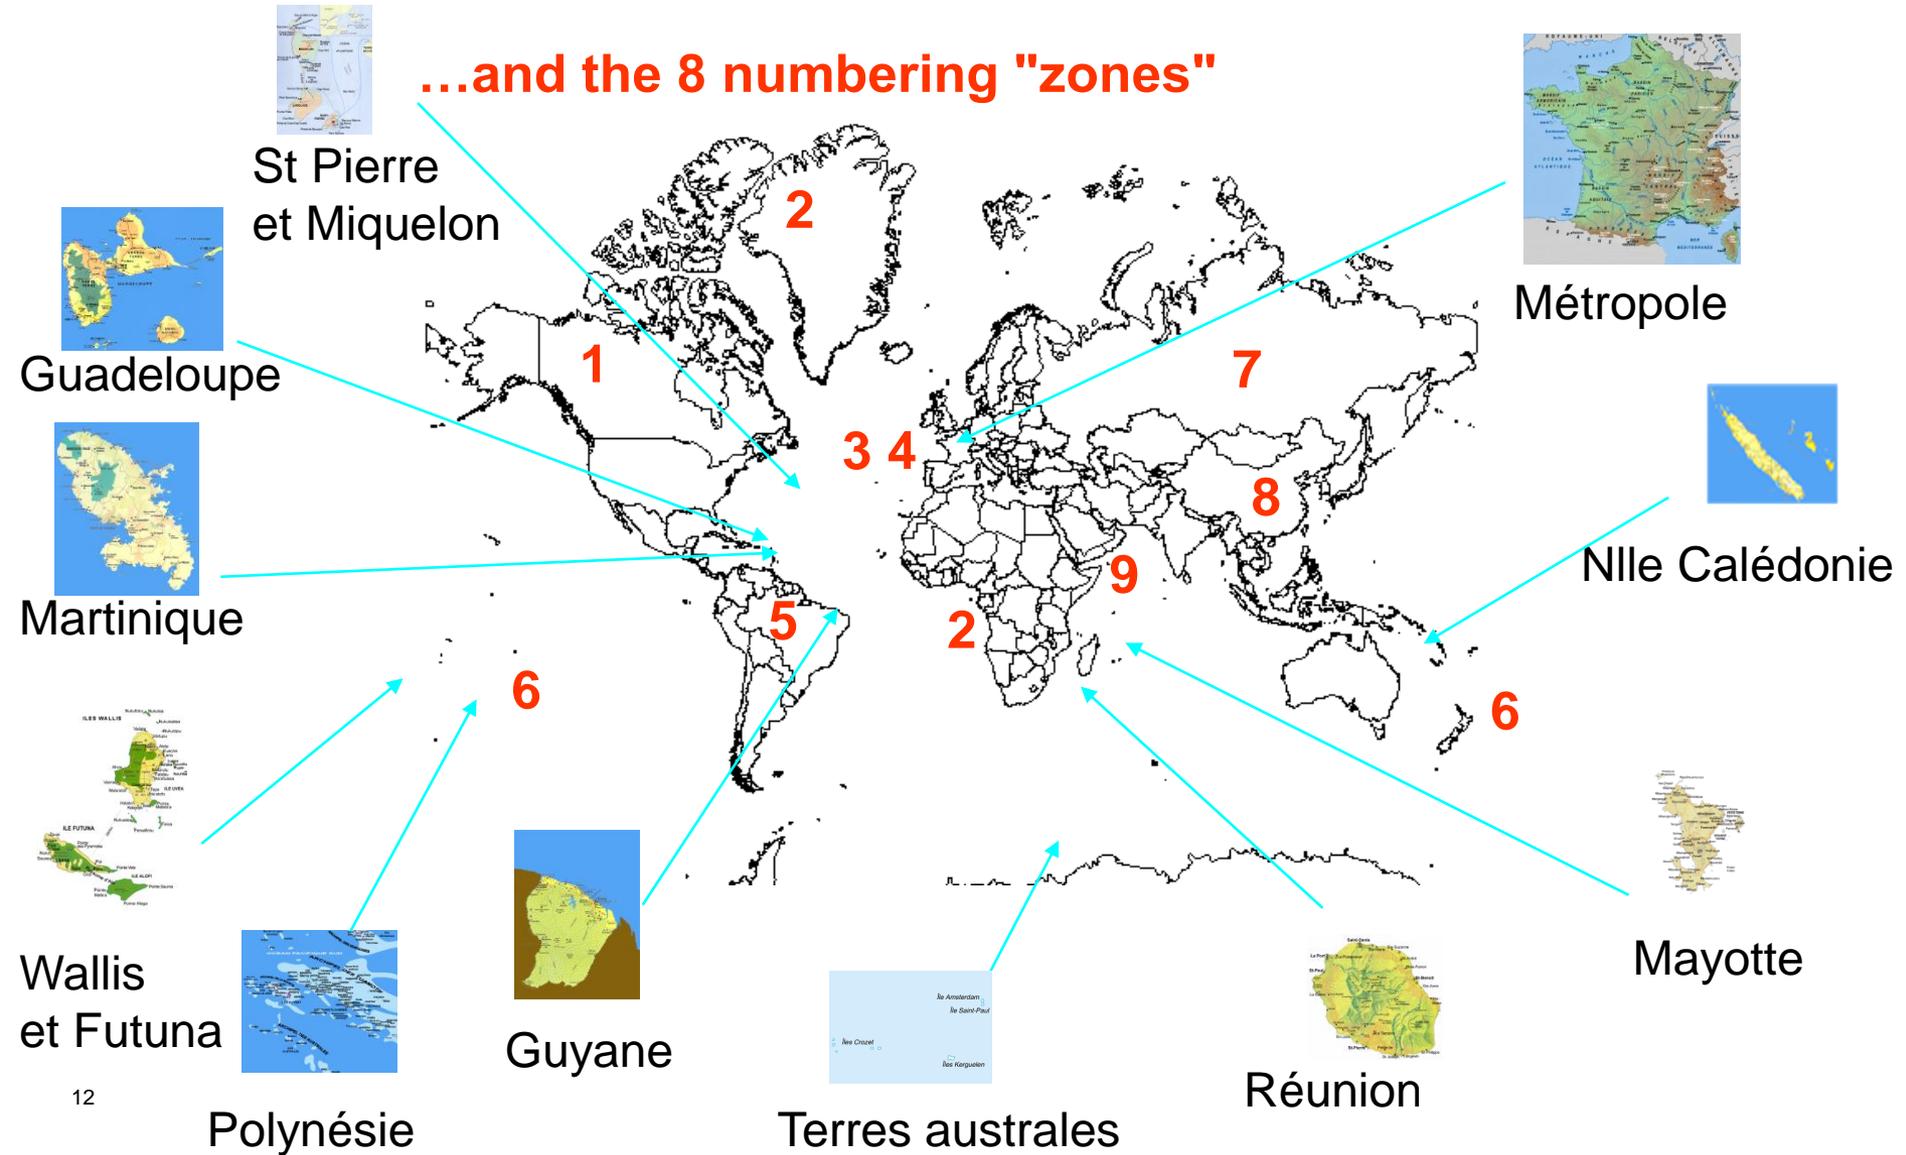

E.164: geographic distribution and "geopolitical dynamics"

- 1966
 - +37 is assigned to German Democratic Republic
- 1968 (White Book)
 - Mexico and Honduras leave the North American NP +1
 - Turkey leaves Zone 3 (*Europe*) to Zone 9 (*Middle East/Asia*)
- 1972 (Green Book)
 - Costa Rica, El Salvador, Honduras, Nicaragua and Panama leave Zone 1 for Zone 6 (*Central/south America*)
- 1989: German reunification: former German Democratic Republic joins +49
- After 1989, newly created countries within Zone 7 get their “own” CCs:
 - Zone 3 (*Europe*): 1993: Lituania, Latvia, Estonia, Moldova (etc.)
 - Zone 9 (*Moyen/Proche Orient - Asie*): Azerbaijan, Georgia
 - Kazakhstan remains +7 shared with Russia
- 1997: split of former Czechoslovakia: +42 is split into 3 digit CCs
- Split of former Yugoslavia: +38 is split: Serbia, Montenegro,...

Reminder: the geography of France....

...and the 8 numbering "zones"

France: geography and consequences for numbering

- 11 "regions"
 - Located in 5 different zones of the E.164 numbering plan**Consequence: they can't/couldn't use the same E.164 country code**
- A variety of regional statuses and degrees of autonomy, as a result of History

- So called Territories
- Departments (close integration)
- others

Consequence: several degrees of integration with the dialling plan of France

Examples:

Réunion island: fully integrated in the 10 digit dialling plan

Wallis et Futuna: autonomy and independent NP management

Mayotte: originally shared with Republic of Comoros and then integrated within the national dialling plan and +262 as a consequence of the change of

status

The French E.164 country codes

+33 is a French country code, not the Country Code for France as a Member State.

French E.164 Country codes: from CCIT to today

- *The structure of the numbering plan for France is the result of a series of successive assignments:*
- 1960 « Red book»: +33 Metropolitan France
- 1964 « Blue book"
 - +262: Réunion,
 - +594: Guyane,
 - +689: Polynésie,
 - +687: Nlle Calédonie
- 1968 "White book" : +681 - Wallis et Futuna
- 1976 « Orange book" : +590 : Guadeloupe, +596 : Martinique
- 1984 : +508 Saint Pierre et Miquelon (formely with +1...)

Calls from abroad

2. The national numbering plan

Orange Expert
Future
networks

General structure

- The dialling plan of France is
 - Closed (no local / regional dialling procedures)
 - 10 digit numbers, generally represented as 0ZABPQMCDU
 - It covers all 6 E.164 country codes:
 - Métropolitain France
 - Martinique
 - Guadeloupe
 - Guyane
 - Réunion, Terres Australes and Antarctiques Françaises, Mayotte
 - Saint Pierre et Miquelon*
- Calls within this plan (6 integrated CCs) can be made with a national dialling format with 10 digits
- Calls within a country code are also 10 digit *
- Other French territories are reachable only through the international (dialling) format (Polynésie, Wallis et Futuna, Nlle Calédonie) |
 - from France and from abroad

Two types of E.164 country codes

- CCs integrated to the 10 digit dialling plan
- CCs *outside of the 10 digit dialling plan*

Overseas department calls from the caller's perspective

The French territories (Wallis et Futuna, Polynésie, Nlle Calédonie) belong to the E-164 numbering plan of France numbers regardless of origin, destination but they do not belong to the 10 digit dialling plan

Mapping b/w dialling and numbering

In what sense does the dialling “integrate” the 5 CCs

National format

Dialling

0ZABPQMCDU

International format E.164

numbering

111213ZABPQMCDU

How can we map the 111213 (CC) ie the Country code to the national dialling format?

⇒ *The value of the E.164 country code depends on the value of the ZAB or ZABP*

- For example, ZAB=590 and 690 are under E.164 Country Code 590.

A brief history of the dialling plan

- The dialling plan of France results from a series/history of changes :
 - **1955**: dialling structure in (AB) PQMCDU and (A) BPQMCDU (IdF)
 - **1996**: the dialling plan is closed and becomes 10 digit based
 - Paris/province call dialling 16 (1)ABPQMCDU ceases to exist
 - 0Z is added to ABPQMCDU to identify a "region"
 - New range for mobile
 - **2001** : the overseas departments join the 10 digit dialling plan
 - Change to E.164 à 3/2+9 digit format
 - Distinction between fixed and mobile

=> assignment of separate ZAB(P) value to each DOM+service (ex. Réunion+mobile: ZAB=692, Réunion landlines :ZAB=590)
 - **2005** : Z=9 is opened for non geographic numbers (in practice set-top boxes)
 - **2008** : Change of Mayotte 269 to 262
 - **2009/2010** : Z=7 is opened
 - **2011/2012** : M2M extension for Z=7, for Metropolitan and overseas departments
 - All other decisions are not directly relative to the structure (policies, portability...)

Mapping DOM ⇌ international format (M2M omitted)

E.212 identification plan overview

- Main concepts – on all Mobile Country Codes: 208, 740, 742, 647 and 308
- Several categories and formats of Mobile Network Codes
 - Mainstream Mobile Network Codes for mobile operators
 - Including a cross territory use for 340
 - MNCs for tests (shared codes)
 - MNCs for « critical infrastructures »(interior and defense ministries)
 - MNCs for fixed Internet radio access (3 digits)
 - Private Mobile Networks (3 digits)
 - MNCs for restricted national roaming

Conclusion

Orange Expert
Future
networks

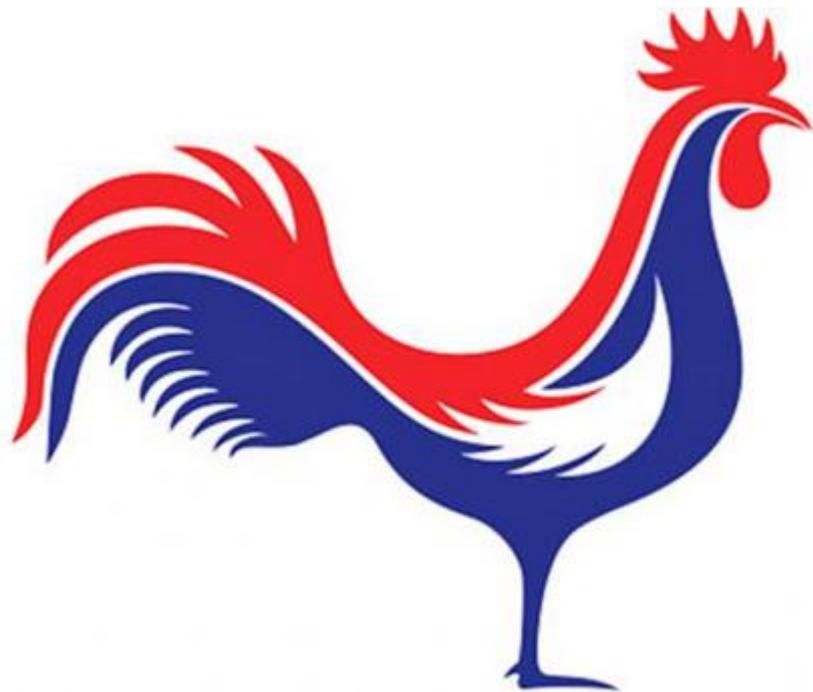

Key takeaways

- National and international formats are intertwined
- They convey structuring choices
 - Which sometimes result from conflicting constraints: political demands, economic incentives, network constraints, tariff transparency etc.
 - Of choice made at a different time, with different technologies
 - Which users are familiar with
- Restructuring national dialling plans is *never* a blank slate exercise
 - They will continue to evolve over time
 - None of them are set in stone
 - They should be in-synch with technological change including network constraints
