Fintech security work in SG17

Abstract:

Digital transformation is under way to solve the traditional problems of industry and finance, and as narrow view, it means paperless process and digital business maturity. Digital transformation is divided into three phases, and challenges arise in areas such as hospitality management, e-commerce, banking, online learning and healthcare. The financial sector is also challenged by digital transformation. Along with this trend, what standards related to FinTech have been developed so far in ITU-T SG17 are introduced.
