What are we doing on retail CBDC?

- The decision if a CBDC should be issued will have to be a judgement by the people.
- It is beneficial to <u>explore potential design options</u> at this stage in order to help such a decision-making for the future.
- The Bank carries out <u>experiments</u> and explores <u>policy issues</u>.
 - Proof of Concept Phase 1 was completed in March 2022.
 - Proof of Concept Phase 2 started in April 2022.
 - Focus areas of policy exploration include <u>allocation of roles</u>, <u>financial stability</u>, <u>privacy and AML/CFT</u>, and <u>cross-border payments</u>.
- <u>Liaison and Coordination Committee</u>, where diverse stakeholders discuss the future of payments, published its <u>interim report</u> in May 2022.
- The Bank will stay committed to supplying cash, as long as public demand exists.

Why do we consider retail CBDC?

- 1. CBDC could play a role to complement cash.
- 2. CBDC could support private payment services.
- 3. CBDC could <u>transform</u> payment and settlement systems into those fit for the <u>digital economy</u>.

Why is "coexistence" important?

- Convertibility is critical, but excessive shift to CBDC could cause disintermediation.
- CBDC system would be divided into "foundational instrument" and "overlay services" areas.

Ecosystems develop as diverse players become involved. **CBDC** Cash Bank **Private Overlay Overlay Overlay Deposit Digital** services services services Money Service Service Provider **Provider Foundational Foundational** Instrument Instrument **Intermediary Intermediary Foundational** Instrument **Central Bank**

Various means of payment coexist.

How do we see the future of payment and settlement systems?

- Looking at the current landscape in Japan, it is unlikely that we will face an immediate problem.
- <u>Challenges unpredictable at this stage may arise</u> as payments become more digital.
- CBDC is becoming a realistic option in many jurisdictions.
- While "issuing CBDC" is a big decision, "not issuing CBDC" is also a big decision. In either case, maintaining the status quo is not an option.
- The goal is to design "payment and settlement systems suitable for the digital society."
- With or without CBDC, we should <u>avoid developing a system that is too unique</u>. Any system that does not fit with global standards would be placed at a disadvantage.
