Enabling secure credential issuance and use with Austroads DTS

Enabling secure credential issuance and use with Austroads DTS

Foundational pillars for harmonized trust

- A common **Certificate Policy (CP)** that is jointly accepted, governed, and regularly reviewed by all participating jurisdictions.
- **Certificate Practice Statements (CPS)** that demonstrate how each participant implements the common requirements.
- A **robust governance model**, particularly around cryptographic key management, lifecycle management, incident response, and accountability.
- A **unified framework for credential issuance** based on ISO/IEC standards
- **Wallet requirements** and controls
- **Testing, conformance, and certification** processes to ensure consistent implementation.

Thank you
