

Keith Mainwaring

Keith Mainwaring is an independent consultant specialising in telecommunications standardisation and policy. He has advised the ITU on their conformity and interoperability programme since 2011 and written reports for the ITU on such topics as the development of “5G” technology, Next Generation Networks (NGN), telecommunications for disaster mitigation and means to combat the counterfeiting of products. He has also advised regulatory authorities and network operators on technology and policy issues, including studies of the type approval schemes used in Mongolia and Iran. He has been active in standardisation activities for many years, in particular in the ITU-T but also in the European

Telecommunications Standards Institute (ETSI), the Alliance for Telecommunications Industry Solutions (ATIS), the British Standards Institute, the Internet Engineering Task Force (IETF) and a number of telecommunications industry forums. He has previously represented Cisco Systems, Telia, Logica and the UK Science and Engineering Research Council.
