SWISS TXT

Assess the accuracy for live subtitles in a quick and effective way

SWISS TXT has developed in collaboration with CaiaC (Centre for Research in Ambient Intelligence and Accessibility in Catalonia) a tool named NERstar. It allows a quick and effective application of the NER model for live and automatic subtitles. The software is currently compatible with Windows-based computers only.

For Broadcasters
- Measuring the quality of live or automatic subtitles provided by external companies
- Measuring the quality of live or automatic subtitles produced by own staff
- Using as a component of the in-house training

For Regulatory Authorities
- Supervising the respect of subtitling standards

For Subtitling Companies
- Measuring the quality of live or automatic subtitles produced by own staff
- Using as component of the in-house training

For Companies in the Speech Recognition Industry
- Automatic generation of test data

For Universities
- Using as a component of the training for study programmes in the area of audiovisual translation
- Using as a research tool
