Setting a Benchmark:

QoE Metrics in an OTT World

Brendan Gill, CEO, OpenSignal

Measuring QoE in a **Rapidly Changing Ecosystem**

- Initial quality metrics were defined around engineering capabilities.
- In a voice-centric & data-limited work, this was ok.
- Now mobile usage has exploded and the variety of applications is accelerating.
- How to measure QoE in such a wide range of user-cases?
- Every use-case requires different QoE metrics !!

Cisco VNI: Forecast Growth in Video Traffic

OpenSignal – The True Network Experience, Globally

#1 Connectivity App

Definitive Metrics & Insight into True Network Experience

Recognized as *de-facto* Industry Standard

The OpenSignal Network

10 million active devices **globally.**
2 billion measurements per day.

Real people, real devices, **real experience.**

Tier-1 Operator Adoption in over 20 different countries.

OpenSignal: **Real-world On-Device** Experience

OpenSignal Methodology Highlights:

- Captures the *end-user* perspective.
- Results reflect time spent in indoors, outdoors, and everywhere people use their devices.
- Tests run at automated, random times to capture full range of experience.
- Thousands of different device models tested.

...Real people, real devices, **real experience.**

OpenSignal

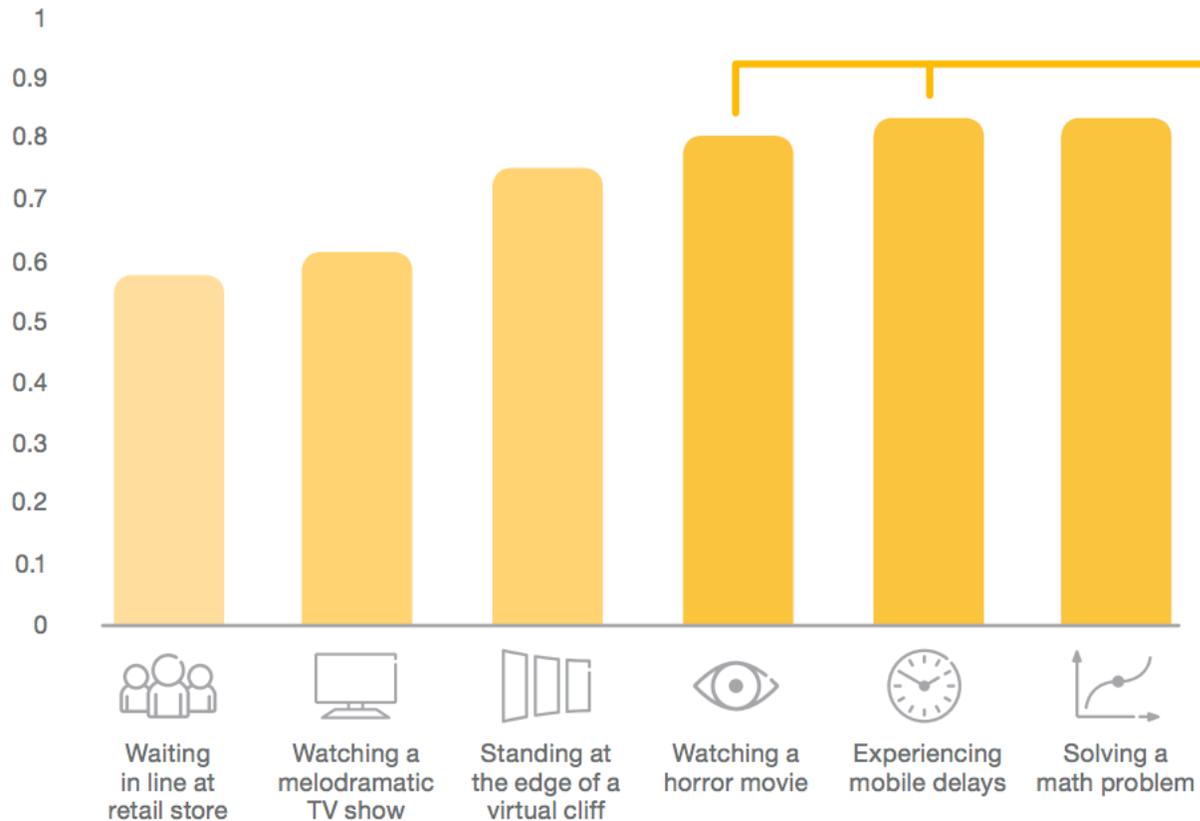

How do we think about QoE for video?

Loading, please wait...

Buffering Horror: As stressful as watching a scary movie

Cognitive load associated with stressful situations

The level of stress caused by mobile delays was comparable to watching a horror movie

Real-world Video Experience

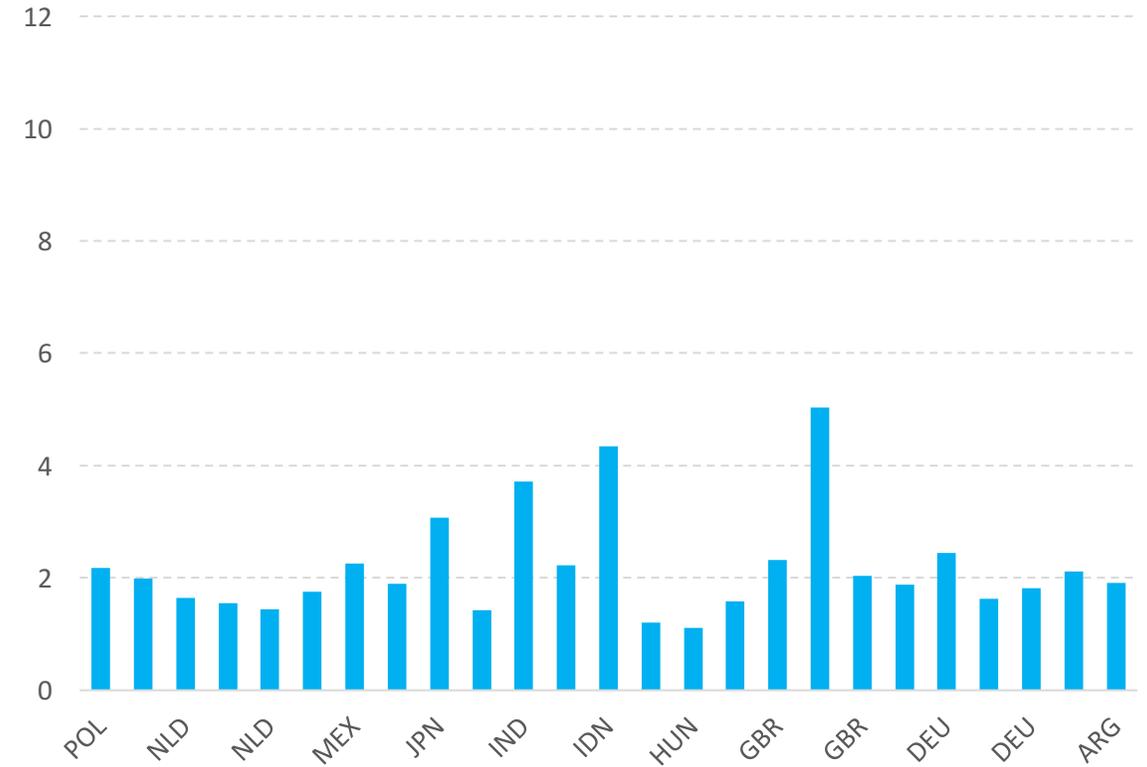

- The following contains initial results from new real-world video testing from the OpenSignal network.
- Tests all run from end user devices under conditions of normal use.
- Tests run on YouTube to reflect real usage.

Real World, Measured Av Video Load Times

Video Load Time (s) - 3G Networks

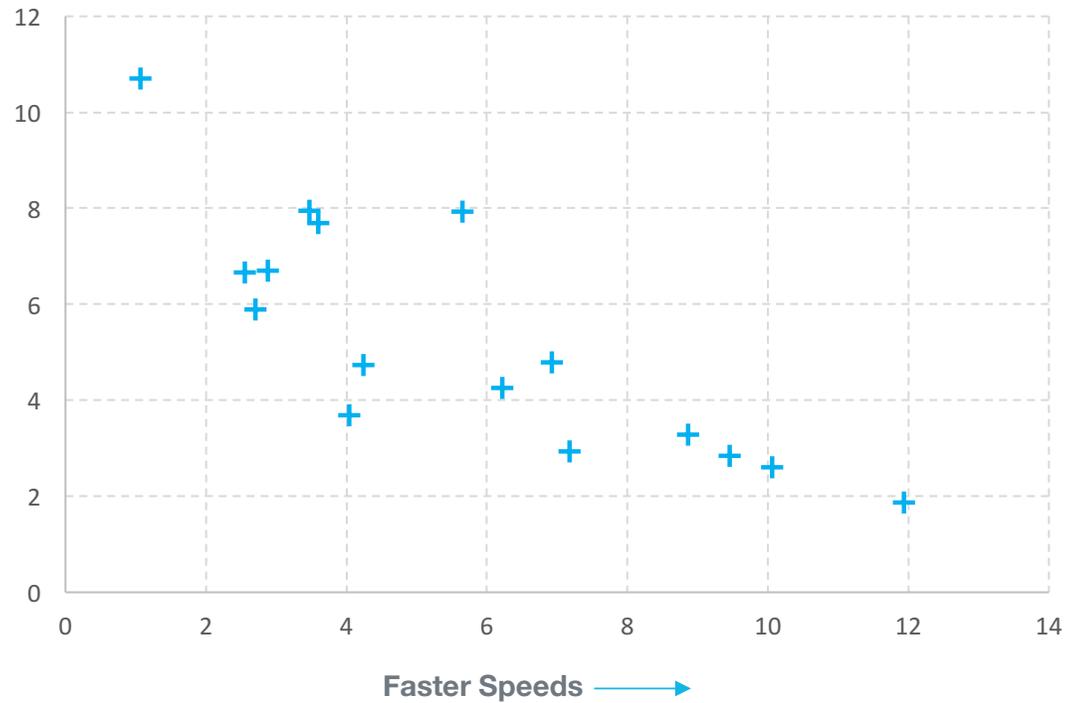

Video Load Time (s) - 4G Networks

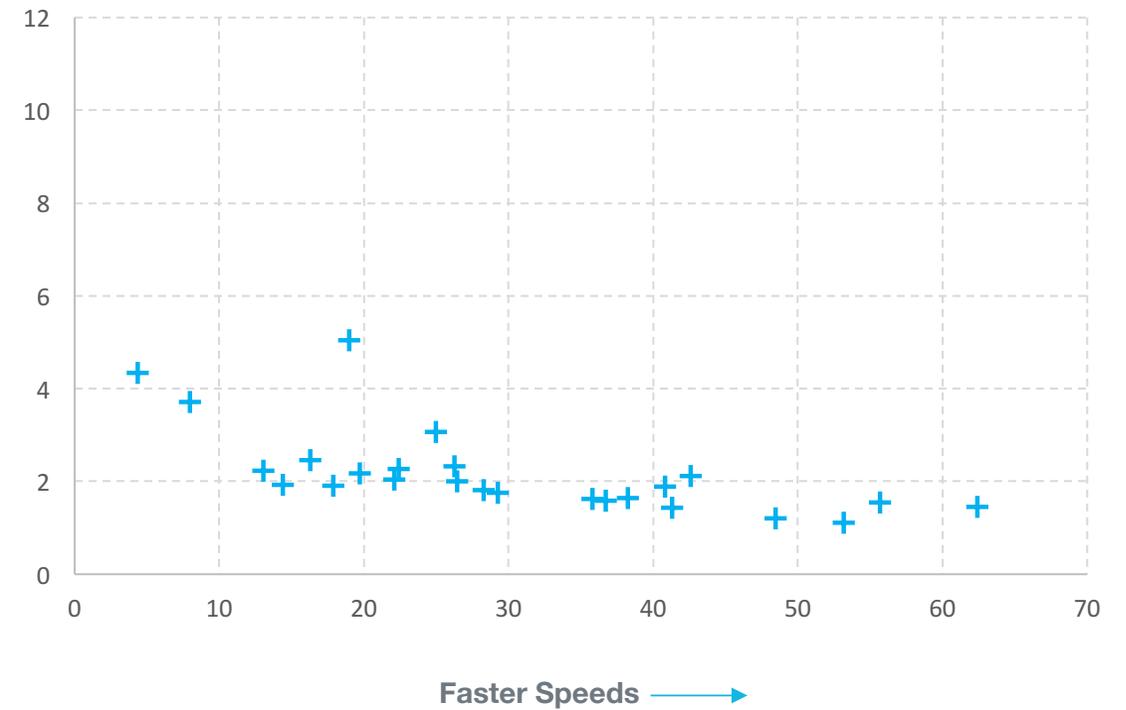

Download Speed: Impact on Load Times

Speed Vs Load Time (3G)

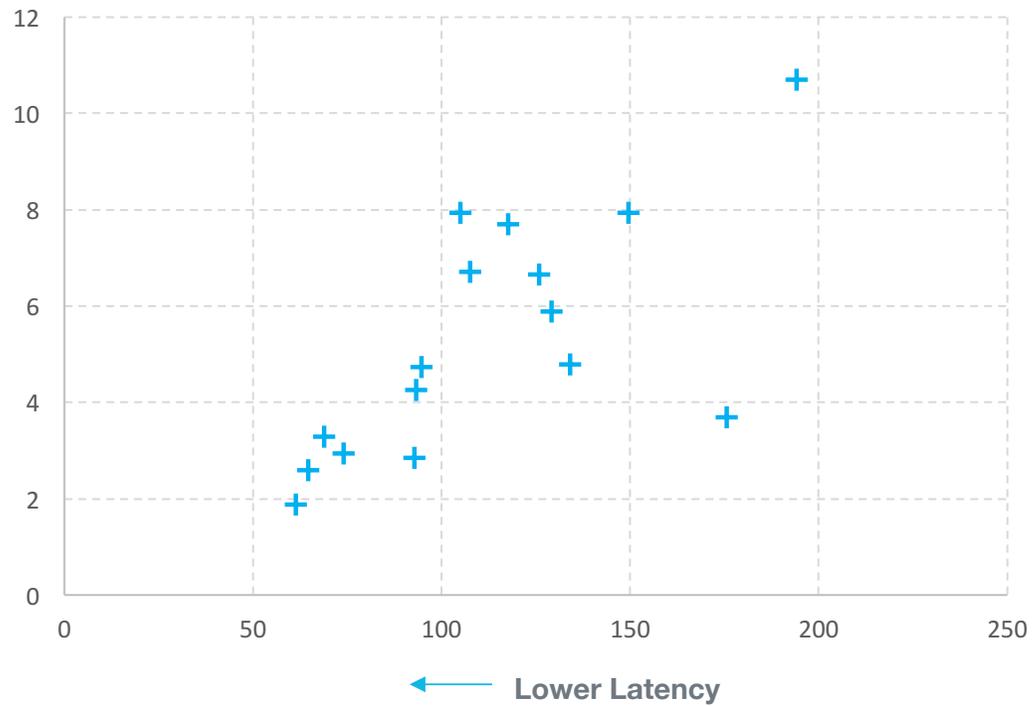

Speed Vs Video Load Time (4G)

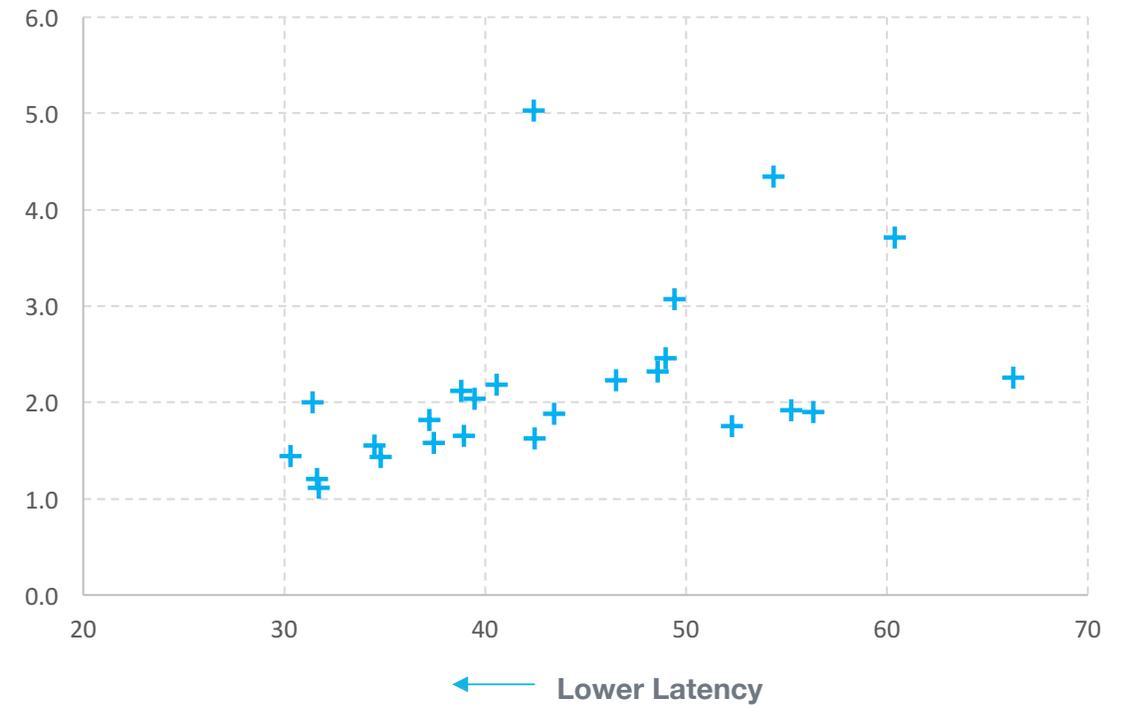

Latency: Impact on Load Times

Latency Vs Load Time (3G)

Latency Vs Load Time (4G)

QoE Metrics in a **Video-centric world**

- We should define QoE metrics for OTT services *as people experience them*.
- *User & application-centric*, not *engineering-centric*.
- Viewing things through the lens of user experience can inform where we need to put focus.
- As we look towards a 5G future, perhaps more focus should be on ubiquitous coverage, lower latency etc.
- Driving better latency is the ‘gift that keeps on giving’ when it comes to video experience. Edge computing & intelligent caching could have powerful impact for video.
