Abstract:

Recommendation ITU-T E.806 describes a baseline framework of best practices for measuring quality of service (QoS) throughout the industry, and covers mobile network QoS measurement campaigns, characteristics and requirements for monitoring systems, post-processing scenarios, as well as sampling methodologies used by regulators, test equipment vendors, companies that deliver network measurements, data analysts and service providers to monitor QoS on a national level. This Recommendation is technology-neutral, but may state different requirements depending on the services being measured.
