## Recommendations for Smartphone Infotainment Assistants

Security Level:

## Industry Insight: Mobile Phones and Vehicles Collaborate to Enable Vehicle Intelligence

 The integration of new-generation information technology and automobile industry has become an important driving force for industry transformation. <u>Smart cockpits are an important</u> <u>criteria for user requirements</u>.

- Fully autonomous driving is still actively explored, laws and regulations still need to be improved, so <u>Smart Cockpit intelligence has become a</u> <u>new pole of competition</u> for OEMs.
- Consumers demand gradually change from safety to individualization, and **Car market positioning evolving from travel tool to living space**.

### Collaboration between Cars and Smartphones accelerates Smart Cockpit evolution and provision Smart Mobility services.

## Interconnection 2.0 Value Scenario: HW Mutual Assistance and Ecosystem Sharing

- Smartphone millions app ecosystem and services for car
  - ✓ Smart Apps are richer and more diverse than Car Apps
  - ✓ Reduce the cost of building a Car Apps ecosystem

- Collaboration between smartphones and in-vehicle HW
  - $\checkmark$  Cars provide better display, HMI, and control capabilities.
  - ✓ Smartphones offer latest computing power, SW, and high-speed connectivity.

### Number of applications

## Technical Architecture Suggestion: High-speed and stable data channels through

## hierarchical connection protocols

#### Solution Architecture

Interaction process (using USB connection as an example)

• **DC protocol**: implements **device discovery** and connection, and establishes network transmission channels based on upper-layer service requirements.

- <u>DV protocol</u>: used to <u>discover and virtualize shared hardware</u> at both ends. For example, mobile phones send audio data to car speakers for playback.
- **ALS protocol**: used for **service discovery, invoking, and collaboration** at the application layer between devices. For example, the in-vehicle infotainment may request to use the network capability of the mobile phone to access the Internet.

## Interconnection: user experience analysis

Why do we need to define interconnection performance recommendations?

- ✓ Critical to ensuring safe driving conditions
- ✓ Maintain the experience to a good level and improve **consumer satisfaction**
- ✓ Provide <u>acceptance reference for OEMs</u> during Smartphone-car interconnection

### • User Journey Definition Experience Scenarios

Related User Experience Indicators: Connection efficiency and stability, smooth system running, clear images, high resolution, and voice recognition sensitivity

## Interconnection performance recommendations: 6 basic scenarios and 29 indicators

• Example of performance recommendations approved in the public FGVM TR3 Technical Report

Scenario	Indicators	Suggestions	Scenario	Indicators	Suggestions
Wired connection	First connection completion delay	≦ 5s	Draiastian	Screen projection delay	≦ 150ms
	Non-First Connection Completion Delay $\leq 5s$		Display	Projection frame rate	FPS ≥ 55 (60 fps video source FPS ≥ 24 (30 fps video source
	Connection Success Rate ≥ 9			Audio output delay	≦ 1000ms
	Long-term connection reliability (disconnection times)	0 (at least 8 hours)	Audio Output	No frame freezing duration for audio output	≥ 4h
Wireless connection	First Discovery Completion Delay	≦ 1.5s		Voice and picture synchronization delay	T ∈ (−125 ms, +45 ms) ~ (−185 ms, +90 ms)
	First discovery success rate	> 70%	User Operations	Touch screen response delay	≦ 200ms
				Steering wheel control response delay	≦ 200ms
	Furthest discovery distance	150 cm	Voice Interaction	Voice wakeup success rate (low noise)	≥ 93%
	First serves the served stars delay.	≦ 5s		Voice wakeup success rate (medium noise)	≥ 90%
	First connection completion delay			Voice wakeup success rate (high noise)	≥ 85%
	Non-First Connection Completion Delay	≦ 5s		Voice interaction response delay (entertainment category)	≦ 2600ms
		≥ 99% 0 (at least 8 hours)		Voice interaction response delay (call category)	≦ 2100ms
	First Connection Success Rate			Voice interaction response delay (navigation category)	≦ 2500ms
	Long-term connection reliability (disconnection times)			Voice interaction success rate (entertainment category)	≥ 85%
	Reconnection completion delay (which is started	≤ 5s		Voice interaction success rate (call category)	≥ 85%
	atter venicle snutdown)	-		Voice interaction success rate (navigation category)	≥ 85%
	Reconnection Success Rate $\geq 99\%$				

## Standard Research Source: China ICCE Alliance - New Power for Cross-Border Cooperation between Smart Devices and Smart Vehicles

September 2020: 52 industry players established ICCE

## ICCE

Intelligent Car Connectivity Industry Ecosystem Alliance

Number of members: 115 (as of 2023.3)

### **Organizational structure**

- Chairman: China Association of Automobile Manufacturers(CAAM)
- The first executive director unit: CAAM, China FAW Group, CAICT, Huawei Device, SAIC, Hangsheng Electronics, SMVIC

**Mission:** commit industry forces to build interconnected and collaborative Car/Phone ecosystem

#### Service scenario

- **Digital Key**: Resolve the pain points through industry collaboration and standardization, accelerate the widespread of the solution.
- **Phone-car interconnect**: widespread the concept of smart interconnectivity and collaboration between vehicle and mobile device

**Data security compliance**: Develop a framework for data use cases which also comply with latest car data regulation in China.

## **ICCE Standard Achievements (Phone/Car interconnect)**

 Huawei's role in standard formulation: A major contributor to ICCE standards, leading the formulation of technical standards as WG leader alongside developing the corresponding Huawei HiCar product

• Currently, Huawei and Changan Automobile hope to contribute their technical experience to ITU standards and provide reference for the industry.

## **ICCE Standard Practice applied to HUAWEI HiCar (1/3)**

As the interconnection 2.0, the distributed technology is used to form a HyperTerminal between smartphones and car

## **ICCE Standard Practice applied to HUAWEI HiCar (2/3)**

**Ecosystem sharing capability:** Top 100+ apps can be shared with vehicles.
