

Trustworthy Data Ecosystems with Blockchain for Cities and Communities

Gyu Myoung Lee

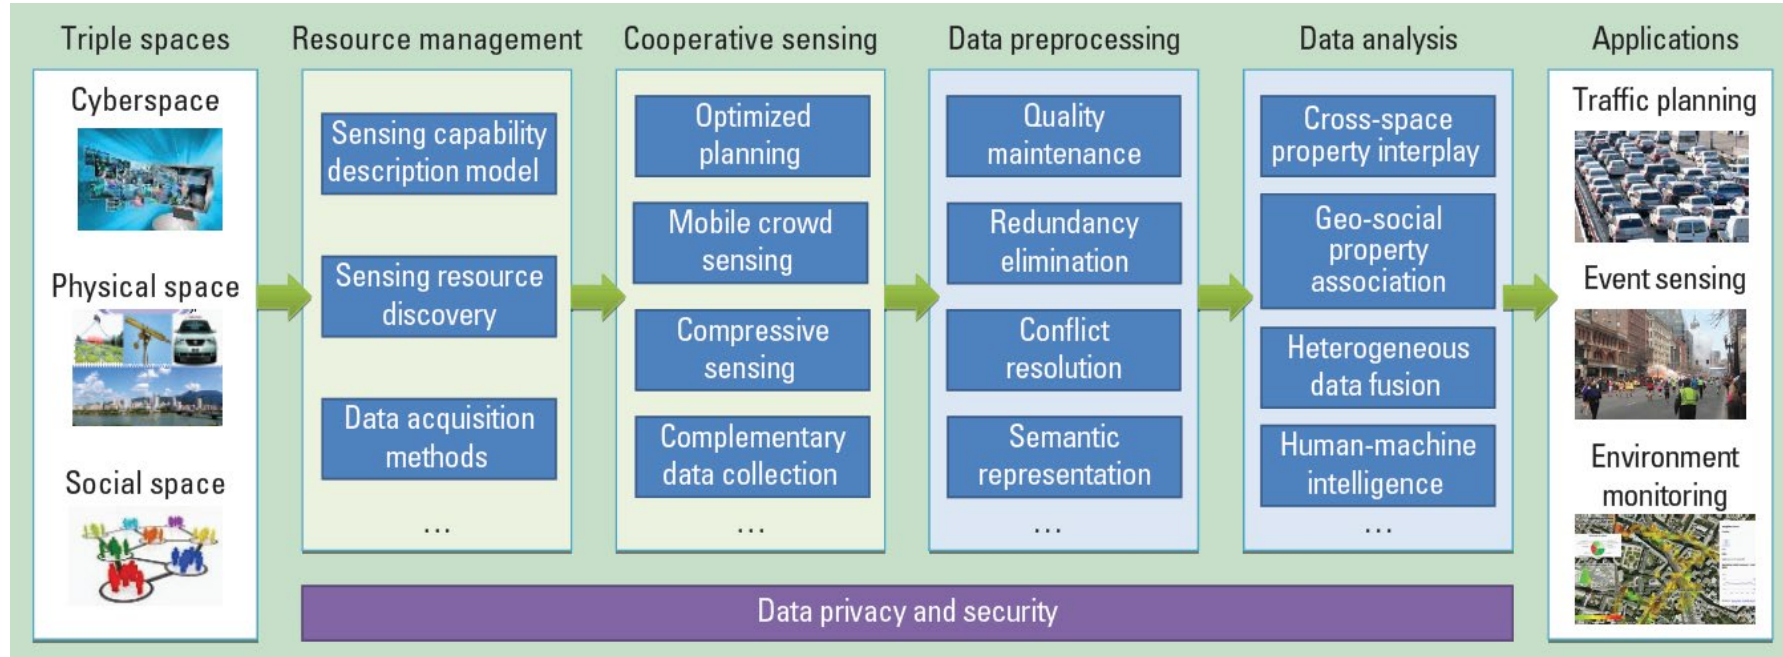

Rapporteur, ITU-T SG20, LJMU UK/KAIST KR

gmlee@kaist.ac.kr

8 December 2021

Data-driven IoT and Smart Cities & Communities

- Support higher volume and velocity of data

"A Data-Centric Framework for Cyber-Physical-Social Systems", IEEE IT Professional, Nov.-Dec. 2015.

BLOCKCHAIN — Internet of Value

A machine for creating trust

- The currency in the Internet is **data**.
- Revolutionizes how transactions are recorded
 - a **decentralized digital ledger** that records transactions
 - builds **trust** with **accountability** and **transparency**

ASSETS

Internet of Value (IoV) with Blockchain

The **IoV** is as a platform of the next generation Internet that enables various types of assets to be digitalized and represented as digital value using **Blockchain**.

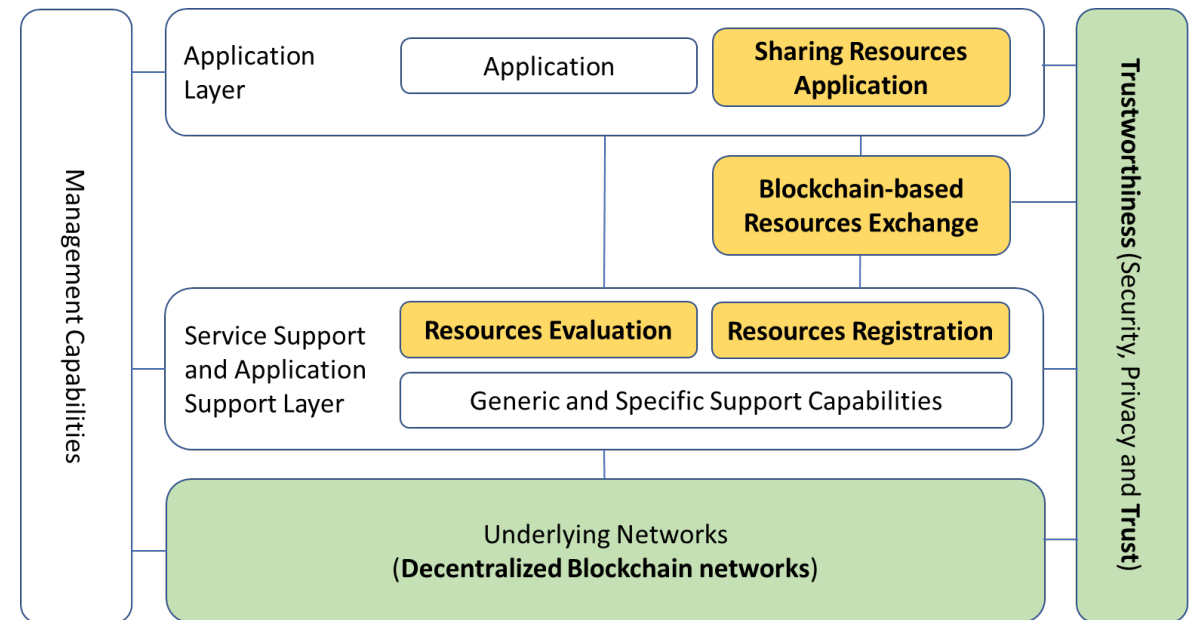

Nguyen B. Truong, Tai-Won Um, Bo Zhou, **Gyu Myoung Lee**, "Strengthening the Blockchain-based Internet of value with trust," IEEE ICC 2018, May 2018 (Kansas City, USA)

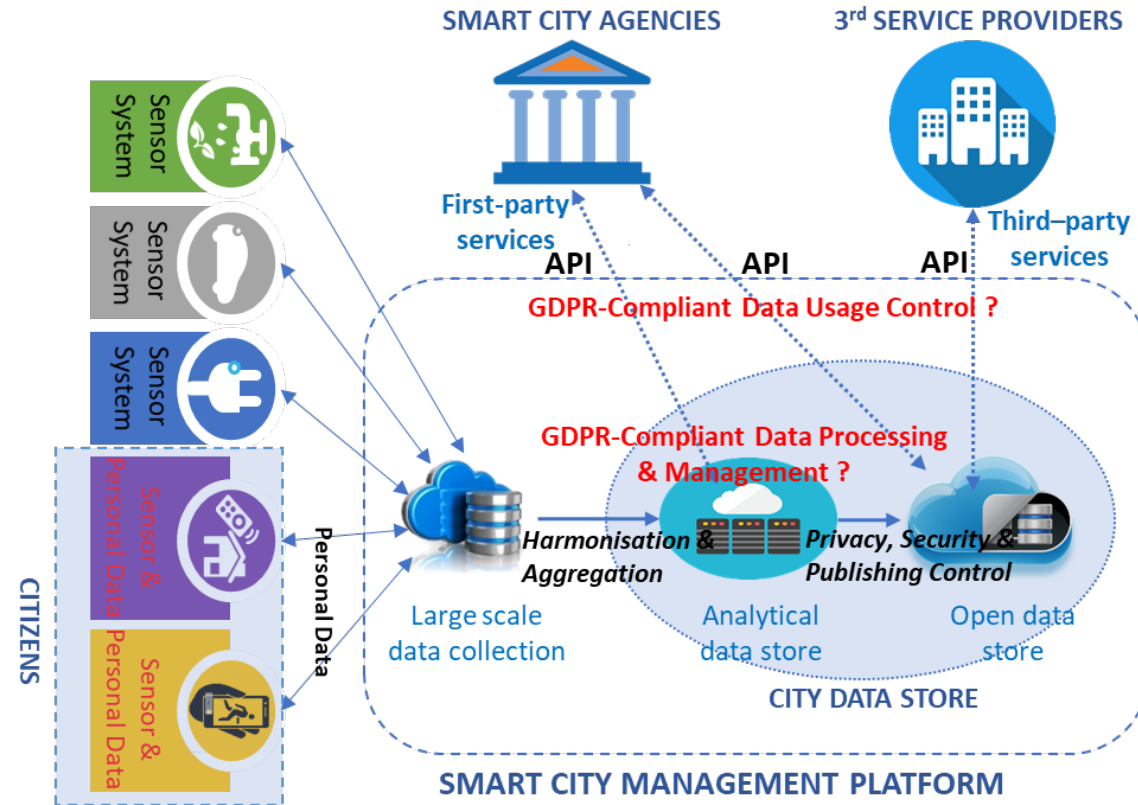

Internet of Resources with Blockchain

- Internet of Resources
 - Blockchain enabling P2P transactions of value in a secure manner without the introduction of an intermediary
 - A platform of the next generation Internet that enables various types of resources (assets) to be digitized and represented as digital resources, and directly and securely exchanged using Blockchain

Trust-enabled blockchain-based sharing networks

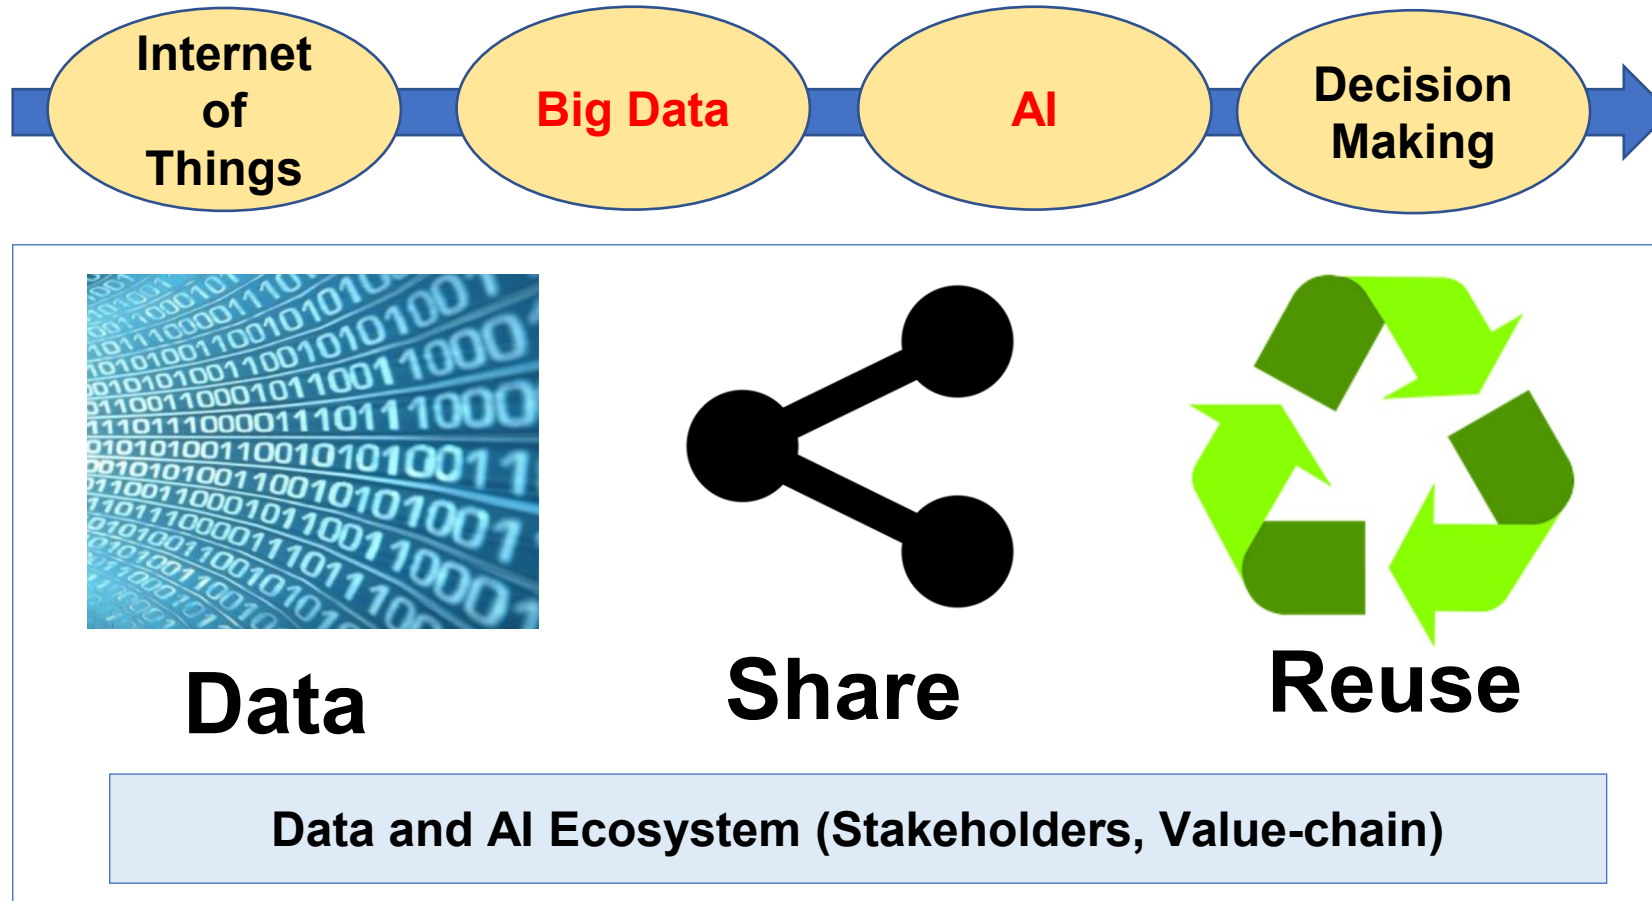

Data Management in Smart Cities

 - **Y.4561 (08/2020)** - *Blockchain-based data management for supporting Internet of things and smart cities and communities*

Y.Suppl.62

Overview of blockchain for supporting Internet of things and smart cities and communities in data processing and management aspects

- This Supplement provides an overview of blockchain related to data processing and management (DPM) for supporting Internet of things (IoT) and sustainable smart cities and communities (SC&C).
 - the advantages, challenges, key features and a common reference model of blockchain from the DPM perspective for supporting IoT and SC&C;
 - key issues for blockchain to support IoT and SC&C from the DPM perspectives;
 - the effects when using blockchain to support IoT and SC&C from the DPM perspective.

An abstract common reference model of blockchain

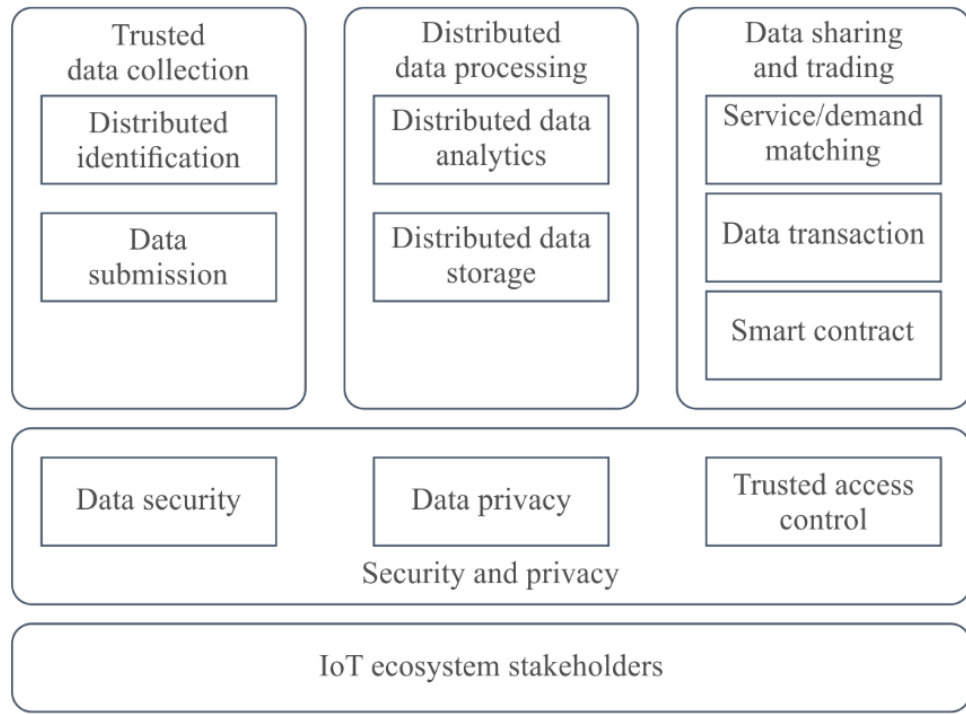

Y Suppl.62(20)_F7-1

Y.4560

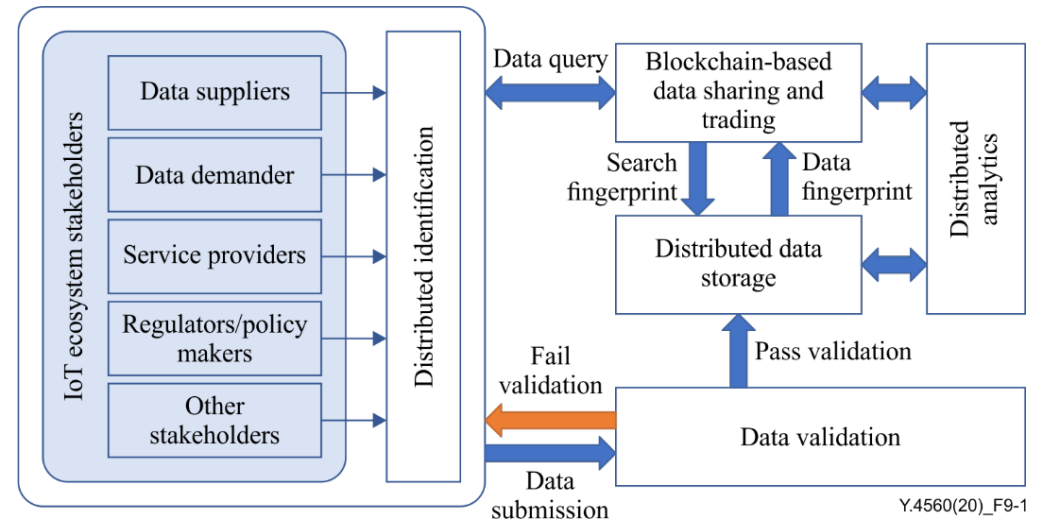

Blockchain-based data exchange and sharing for supporting Internet of things and smart cities and communities

A functional model of blockchain-based data exchange and sharing

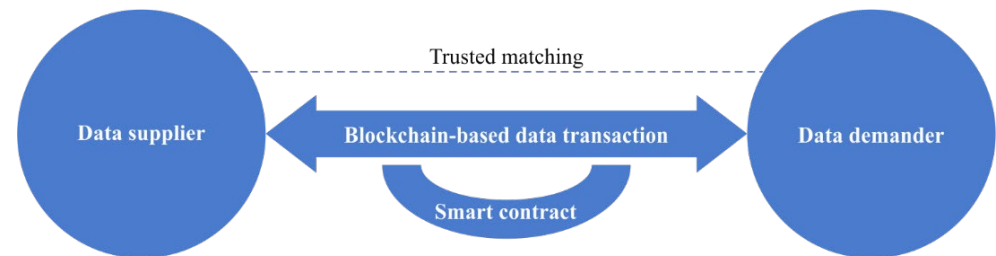

Y.4560(20)_F8-1

Blockchain-based data exchange and sharing platform

Y.4560(20)_F9-1

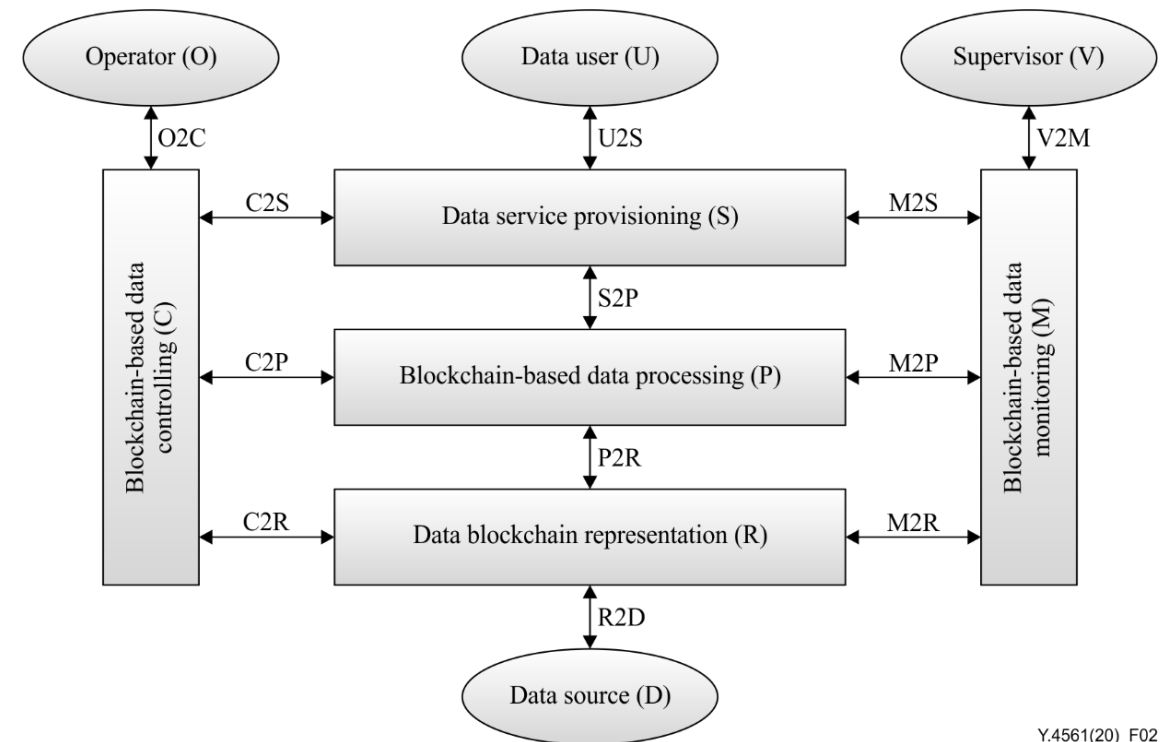

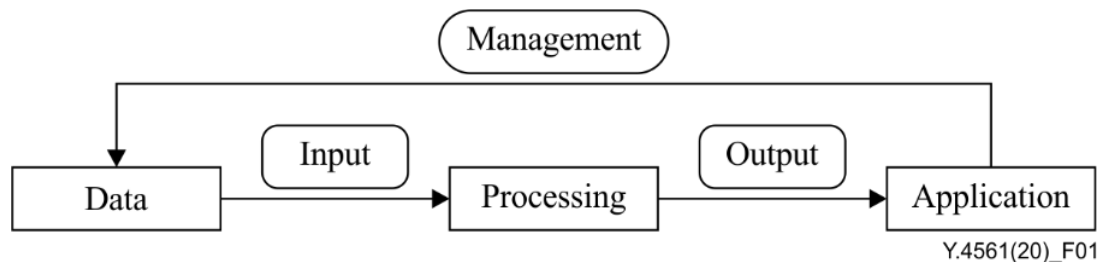

Y.4560(20)_F9-2

Y.4561

Blockchain-based data management for supporting Internet of things and smart cities and communities

- Requirements of blockchain-based data management,
- Generic reference model of blockchain-based data management,
- Common capabilities and procedures of blockchain-based data management.

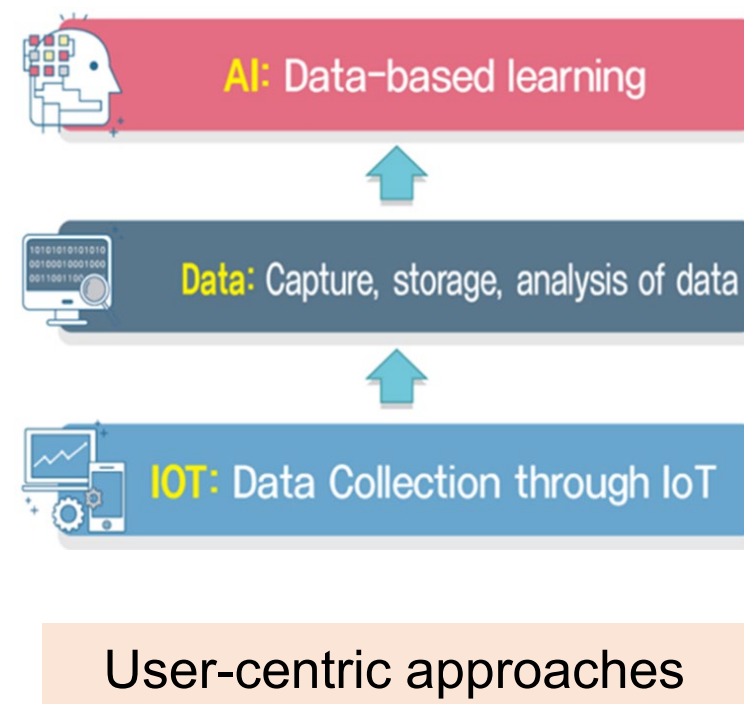

A generic reference model of blockchain-based data management

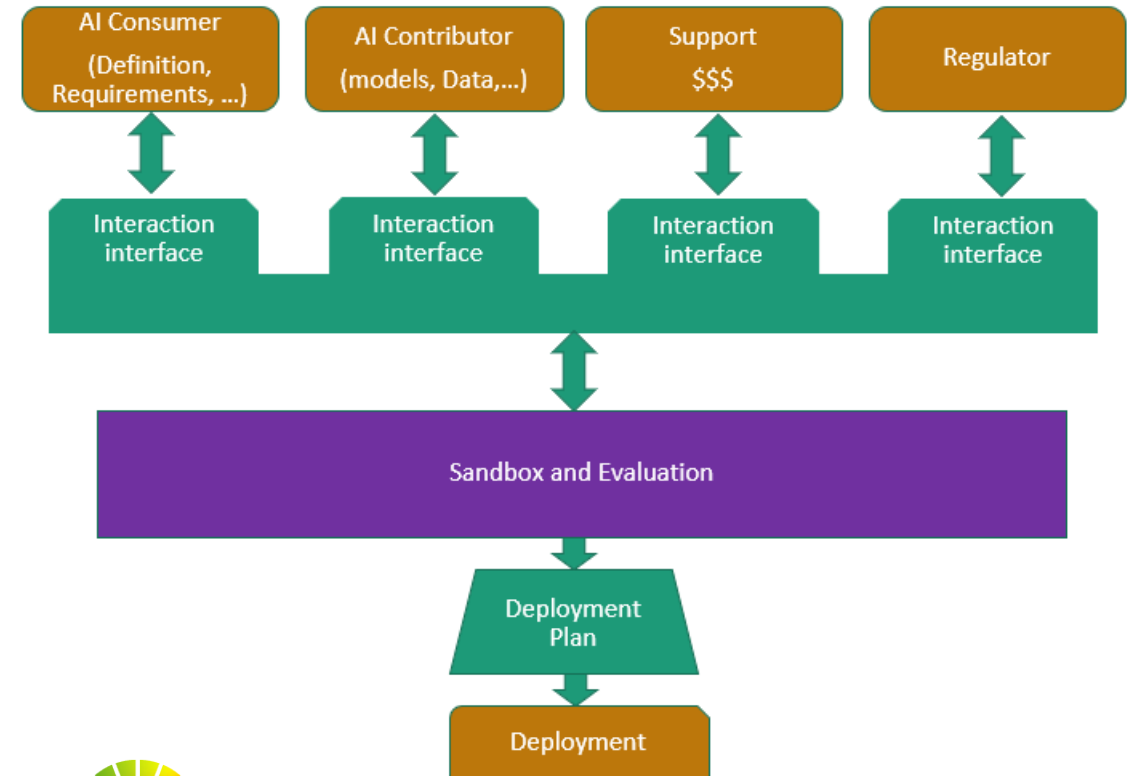

ITU-T SG20 - AIoT

Artificial Intelligence of Things (AIoT), a combination of AI, data and IoT, creates intelligent things that learn from the generated data and use these insights to make autonomous decisions with distributed and lightweight AI technologies to enable intelligence on the edge as well as to achieve more efficient and real-time IoT operations, improve human-machine interactions and enhance data management and analytics.

- AI at the edge
- Lightweight AI/ML (TinyML)
- Distributed Artificial Intelligence-as-a-Service (DAIaaS)
- **Decentralization with blockchain**
- Predictive Analytics and Real Time Processing with Accurate Decision

Project Resilience

Toward Decentralization

Tim Berners-Lee

Decentralisation: the next big step for the world wide web

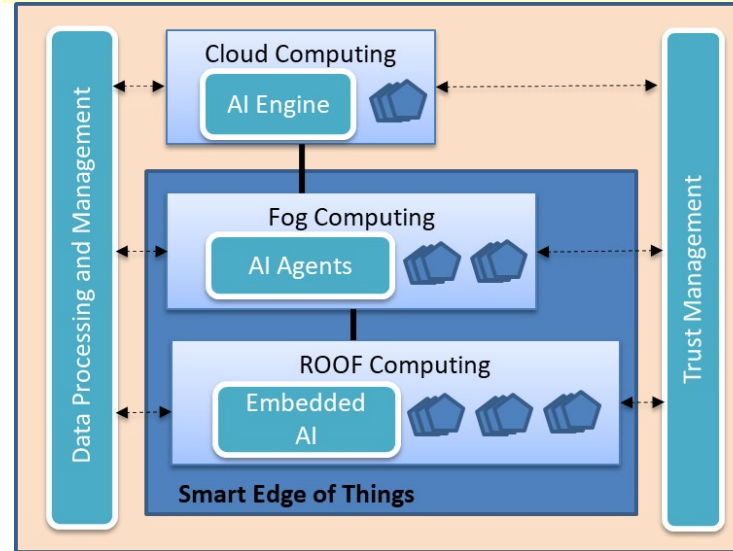

The decentralised web, or DWeb, could be a chance to take control of our data back from the big tech firms. So how does it work and when will it be here?

The Guardian: September 2018
