

Mobile Payment Application Security Tests

Arnold Kibuuka, Project Officer, ITU

February 2022

Overview

- i. USSD & STK App security tests
- ii. Android App security tests

USSD and STK App Security Tests

USSD and STK App Security Tests

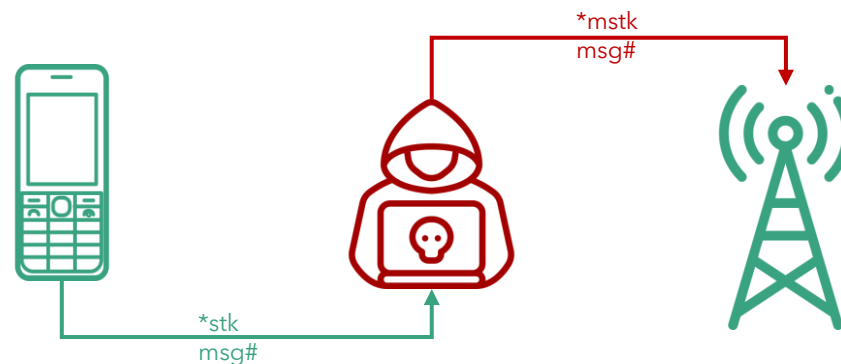

a. **SIM Swap** and **SIM cloning**

b. susceptibility to **binary OTA attacks**
(SIM jacker, WIB attacks)

c. **remote USSD** execution attacks

d. **man-in-the-middle attacks** on STK
based DFS applications

Man-in-the-Middle attacks on STK based DFS applications

MiTM attack simulation on STK using a SIMtrace

Testing Man-in-the-Middle interception using SIMtrace

Man-in-the-Middle attacks on STK based DFS applications

▼ Command details: 012304
Command Number: 0x01
Command Type: GET INPUT (0x23)
Command Qualifier: 0x04
▼ Device identity: 8281
Source Device ID: Terminal (Card Reader) (0x82)
Destination Device ID: SIM / USIM / UICC (0x81)
▼ Result: 00
Result: Command performed successfully (0x00)
▼ Text string: 0435343533
Text String Encoding: GSM default alphabet, 8 bits (0x04)
Text String: 5453
Status Word: 911c Normal e of command with info from proactive SIM

DFS PIN from
captured data

Thin SIM

Testing susceptibility to binary OTA attacks (SIMjacker, WIB attacks)

A binary OTA message can instruct the SIM to:

- initiate SS,
- Send SMS
- Initiate a phone call on a vulnerable SIM and will affect both USSD and STK apps.

(see [CVE-2019-16256](#))

Source: Adaptive Mobile

Testing remote USSD execution attacks

Setup for testing USSD remote attacks through open ADB ports

```
figisit@ubuntu: ~/LAB/platform-tools
figisit@ubuntu:~/LAB/platform-tools$ ./adb shell
HWEVA:/ $ am start -a android.intent.action.CALL -d tel:*185%23
Starting: Intent { act=android.intent.action.CALL dat=tel:xxxxx }
HWEVA:/ $ am start -a android.intent.action.CALL -d tel:*185*1*1%23
Starting: Intent { act=android.intent.action.CALL dat=tel:xxxxxxxxx }
HWEVA:/ $
```

USSD execution
through a terminal
for a device
connected to Wi-Fi

Testing remote USSD execution attacks

Shodan report:
showing services
with ADB open
connected to the
internet

adb can also be used to attack services on IoT devices

Recommendations

Remote USSD execution on devices

- Disable ADB
- User education
- Discourage use rooted devices

SIM exploitation using binary OTA

- Binary OTA SMS filtering & blocking.
- SMS home routing.
- SIM card security

Man-in-the-Middle attacks

- Use session timeout
- Secure radio channel communication
- SS7 controls and mitigations

SIM swap and SIM clone attacks

- SIM change detection. (ICCID, IMEI)
- Secure storage of SIM data like IMSI and secret key (KI values)

Hardware for security testing of USSD and STK based DFS

1. Laptop
2. Mobile Android smartphone, Samsung S4
3. Card reader
4. SIM card adapter
5. Mobile featurephone, Samsung 1200
6. Programmable/blank SIMs
7. SIMtrace microSIM & SIM (3FF) FPC Cab
8. SIMtrace2 Hardware Kit
9. Wi-Fi router - Synology RT2600AC

Software for USSD and STK based DFS security testing

- i. pySIM: - SIM cloning
- ii. SIMtrace: - Man-in-the-middle attacks
- iii. SIM tester: - Binary OTA attacks
- iv. ADB platform tools: - Remote USSD attack
- v. Wireshark: - STK analysis

Android App Security Tests

Introduction

The Open Web Application Security Project

A collaborative, non-for-profit foundation that works to improve the security of web applications

Also works on security of mobile applications.

OWASP Mobile Top Ten

OWASP project that aims to identify and document the top ten vulnerabilities of mobile applications

Lab methodology

18 tests organized according to OWASP mobile top ten

Android tests

- Our tests are organized according to the subjects of the OWASP Mobile Top Ten:
 - M1 Improper Platform Usage
 - M2 Insecure Data Storage
 - M3 Insecure Communication
 - M4 Insecure Authentication
 - M5 Insufficient Cryptography
 - M6 *Insecure Authorization*
 - M7 *Client Code Quality*
 - M8 Code Tampering
 - M9 Reverse Engineering
 - M10 *Extraneous Functionality*
- M6, M7, M10 out of scope because they would need access to the source code or require collaboration with the editor

M1 Improper Platform Usage

The application should make correct use of the features of the platform (phone's operating system)

T1.1 Android:allowBackup

- Backup of the application and its data into the cloud should be disabled

T1.2 Android:debuggable

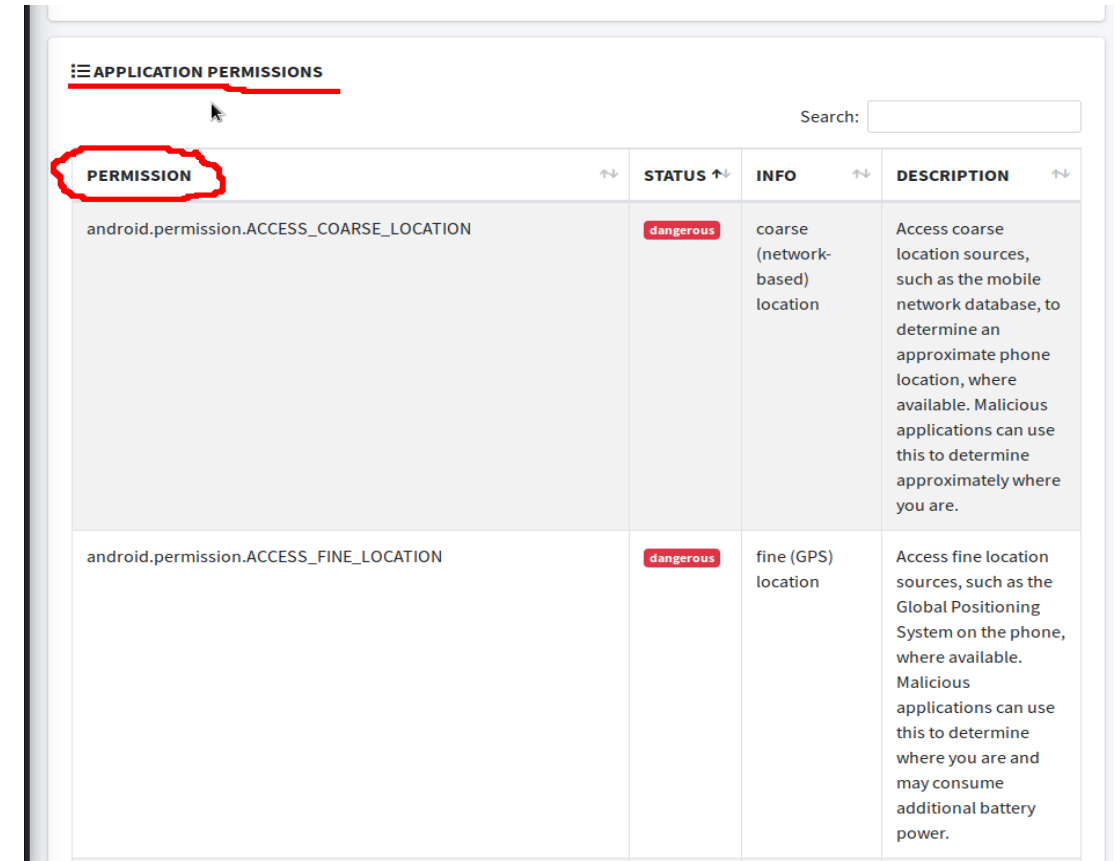

- Debugging features of the application should be disabled

T1.3 Android:installLocation

- The application should be installed in the internal, more secure, memory

T1.4 Dangerous permissions

- The application should not require dangerous permissions, as defined by Android.

APPLICATION PERMISSIONS				
PERMISSION	STATUS	INFO	DESCRIPTION	
android.permission.ACCESS_COARSE_LOCATION	dangerous	coarse (network-based) location	Access coarse location sources, such as the mobile network database, to determine an approximate phone location, where available. Malicious applications can use this to determine approximately where you are.	
android.permission.ACCESS_FINE_LOCATION	dangerous	fine (GPS) location	Access fine location sources, such as the Global Positioning System on the phone, where available. Malicious applications can use this to determine where you are and may consume additional battery power.	

M2 Insecure Data Storage

```
<uses-sdk android:minSdkVersion="16" android:targetSdkVersion="28" />
<uses-feature android:name="android.hardware.telephony" android:required="false" />
<uses-feature android:name="android.hardware.telephony.cdma" android:required="false" />
<uses-feature android:name="android.hardware.telephony.gsm" android:required="false" />
<uses-feature android:name="android.hardware.camera" android:required="false" />
<uses-feature android:name="android.hardware.camera.autofocus" android:required="false" />
<uses-feature android:name="android.hardware.camera.flash" android:required="false" />
<uses-feature android:name="android.hardware.camera.front" android:required="false" />
<uses-feature android:name="android.hardware.camera.any" android:required="false" />
<uses-feature android:name="android.hardware.bluetooth" android:required="false" />
<uses-feature android:name="android.hardware.location" android:required="false" />
<uses-feature android:name="android.hardware.location.network" android:required="false" />
<uses-feature android:name="android.hardware.location.gps" android:required="false" />
<uses-feature android:name="android.hardware.microphone" android:required="false" />
<uses-feature android:name="android.hardware.wifi" android:required="false" />
<uses-feature android:name="android.hardware.wifi.direct" android:required="false" />
<uses-feature android:name="android.hardware.screen.landscape" android:required="false" />
<uses-feature android:name="android.hardware.screen.portrait" android:required="false" />
<uses-feature android:glEsVersion="0x00020000" android:required="true" />
<uses-permission android:name="android.permission.INTERNET" />
<uses-permission android:name="android.permission.ACCESS_NETWORK_STATE" />
<uses-permission android:name="android.permission.ACCESS_WIFI_STATE" />
<uses-permission android:name="android.permission.VIBRATE" />
<uses-permission android:name="android.permission.WAKE_LOCK" />
<uses-permission android:name="android.permission.USE_FINGERPRINT" />
<uses-permission android:name="android.permission.ACCESS_FINE_LOCATION" />
<uses-permission android:name="android.permission.READ_PHONE_STATE" />
<uses-permission android:name="android.permission.READ_CONTACTS" />
<uses-permission android:name="android.permission.WRITE_CALENDAR" />
<uses-permission android:name="android.permission.CAMERA" />
<uses-permission android:name="android.permission.FLASHLIGHT" />
<uses-permission android:name="android.permission.WRITE_EXTERNAL_STORAGE" />
<supports-screens android:largeScreens="true" android:xlargeScreens="true" />
<uses-permission android:name="com.google.android.c2dm.permission.RECEIVE" />
```

Data should be stored in a way that limits the risks in case of loss or compromise of the phone

T2.1 Android.permission.WRITE_EXTERNAL_STORAGE

- No permission to write to a removable memory card

T2.2 Disabling screenshots

- If not disabled, screen shots are done automatically to generate thumbnails for task switching

M3 Insecure Communication

Protect against eavesdropping and manipulation of traffic

T3.1 Application should only use HTTPS connections

- Test by sniffing traffic

T3.2 Application should detect Machine-in-the-Middle attacks with untrusted Certificates

- Would allow anybody to intercept traffic
- Test by intercepting traffic with proxy

T3.3 Application should detect Machine-in-the-Middle attacks with trusted certificate

- Would allow authorities to intercept traffic
- Test by installing root certificate on phone, intercept with proxy

T3.4 App manifest should not allow clear text traffic

The screenshot displays the Burp Suite interface. The top menu bar includes options like Project, Intruder, Repeater, Window, Help, Logger++, and Backslash. Below the menu is a toolbar with various tools such as Errors, EsPreSSO, Target, Proxy, JSON Beautifier, Intruder, Repeater, Sequencer, Decoder, Comparer, Extender, Versions, Software Vulnerability Scanner, and Additional Scanner Checks. The main window shows a list of intercepted HTTP requests. The selected request is a POST to /smartphone/service/v1/orders/p2p/send. The detailed view of this request is shown below, including the raw data, parameters, headers, hex, and JSON body. The JSON body contains fields like amount, currency, certificateFingerprint, moneyReceiver, moneyReceiverMobileNumber, moneySender, orderId, reservationDate, sendMoneyEvenIfCustomerUnknown, and signature.

```

```

M4 Insecure Authentication

Prevent unauthorized access to the application

T4.1 Authentication required before accessing sensitive information

- Application must require PIN or fingerprint

T4.2 The application should have an inactivity timeout

T4.3 If a new fingerprint is added, authentication with fingerprints should be temporarily disabled

- User should provide PIN to enable fingerprints again
- Prevents attacks where an attacker adds their fingerprint to access the application

T4.4 It should not be possible to replay intercepted requests (e.g. a money transfer)

- An attacker intercepting a request for a money transfer could replay it to steal money from the victim.

M5: Insufficient Cryptography

```
..  
"moneyReceiverMobileNumber":"+4179  
"moneySender":{  
  "firstName"  
  "lastName":  
},
```

Cryptography can only protect confidentiality and integrity of data if correctly implemented

```
112.     }  
113.  
114.     @TargetApi(8)  
115.     public static File b(Context context) {  
116.         if (bl.a()) {  
117.             return context.getExternalCacheDir();  
118.         }  
119.         return new File(Environment.getExternalStorageDirectory().getPath() + "  
120.     }  
121.  
122.     public static String b(String str) {  
123.         try {  
124.             MessageDigest instance = MessageDigest.getInstance("SHA-1");  
125.             instance.update(str.getBytes());  
126.             return a(instance.digest());  
127.         } catch (NoSuchAlgorithmException unused) {  
128.             return String.valueOf(str.hashCode());  
129.         }  
130.     }  
131.  
132.     @TargetApi(9)  
133.     public static boolean b() {  
134.         if (bl.b()) {  
135.             return Environment.isExternalStorageRemovable();  
136.         }  
137.     }  
138. }
```

T5.1 The app should not use unsafe crypto primitives

- E.g., MD5, SHA-1, RC4, DES, 3DES, Blowfish, ECB
- Search for these in the code
- Detection of these primitives does not imply that they are used for protecting critical information!

T5.2 The HTTPS connections should be configured according to best practices

- Watch where the app connects to, use Qualys SSL labs to evaluate configuration, expect a grade of B or more

M8: Code Tampering

Prevent an attacker from tampering the code on the telephone

T8.1 The application should refuse to run on a rooted device

- On a rooted device, users can manipulate the code of the application

M9 Reverse engineering

```
125.         instance.update(str.getBytes());
126.         return a(instance.digest());
127.     } catch (NoSuchAlgorithmException unused) {
128.         return String.valueOf(str.hashCode());
129.     }
130. }
131.
132. @TargetApi(9)
133. public static boolean b() {
134.     if (b1.b()) {
135.         return Environment.isExternalStorageRemovable();
136.     }
137.     return true;
138. }
139.
140. public Bitmap a(String str) {
141.     dt<String, Bitmap> dtVar = this.d;
142.     if (dtVar != null) {
143.         return dtVar.a(str);
144.     }
145.     return null;
146. }
147.
148. public void a() {
149.     synchronized (this.g) {
150.         if (this.c == null || this.c.a()) {
151.             File file = this.f.c;
152.             if (this.f.g && file != null) {
153.                 if (!file.exists()) {
154.                     file.mkdirs();
155.                 }
156.             }
157.         }
158.     }
159. }
```

Prevent attackers from analyzing the logic of the application

T9.1 The code should be obfuscated

- When the code is obfuscated, it is much more difficult to understand the logic of the code
- This makes it more difficult to manipulate the code or to find potential vulnerabilities
- Decompile the code and assess its readability

Tests summary

TEMPLATE FOR APPLICATION SECURITY BEST PRACTICES	Corresponding tests
9.1 Device integrity	T1.2 Android:debuggable T1.4 Dangerous permissions T8.1 The application should refuse to run on a rooted device
9.2 Communication Security and Certificate Handling	T3.1 Application should only use HTTPS connections T3.2 Application should detect Machine-in-the-Middle attacks with untrusted certificates T3.3 Application should detect Machine-in-the-Middle attacks with trusted certificates T3.4 App manifest should not allow clear text traffic T5.1 The app should not use unsafe crypto primitives T5.2 The HTTPS connections should be configured according to best practices T5.3 The app should encrypt sensitive data that is sent over HTTPS
9.3 User authentication	T4.1 Authentication required before accessing sensitive information T4.2 The application should have an inactivity timeout T4.3 If a fingerprint is added, authentication with fingerprints should be disabled T4.4 It should not be possible to replay intercepted requests
9.4 Secure Data Handling	T1.1 Android:allowBackup T1.3 Android:installLocation T2.1 Android.permission.WRITE_EXTERNAL_STORAGE T2.2 Disabling screenshots
9.5 Secure Application Development	T9.1 The code of the app should be obfuscated

What we need to test your DFS app

USSD and STK tests

- 2 SIM cards for the MNO networks to be tested.
- Active DFS account on each SIM
- PIN codes of the active wallets
- Prepaid mobile credit on the SIM cards.
- Include the USSD codes for each of the DFS providers.
- DFS credit on the DFS wallets (To be used for the tests).

Android app testing

- 2 accounts used for the Android app.
- Links to the Android DFS apps from the Play Store/APK file
