AI

I was unhappy with past therapists and turned to ChatGPT. It helped me open up about trauma and make changes in my life.

# Individual AI use: suddenly in the spotlight

## For comparison: Survey timeline ICT HH survey 2023

By November 2022, the legal acts for the 2023 survey were already published and we were almost done with the preparation of the 2024 survey

MQ drafting  
process in  
2022: **too late  
to include AI  
for 2024**

MQ drafting  
process in 2023 (for  
the 2025 survey):  
**decision to react  
to AI boom**

Survey year 2025:  
**3 questions  
on AI use by individuals  
in the ICT HH survey**

first EU-wide  
collection in  
2025, national  
collection in  
some countries  
already this year

# Challenges – in general

Burden limit set by the framework regulation:  
**max. 139 variables** –  
for the whole survey

Balance between  
**relevance** (timely reaction  
to developments) and  
keeping a **time series** of  
comparable results

**Fast-changing field,  
lengthy legal process:**  
topic changes very quickly,  
but we start planning 2  
years in advance

**Survey of the general population:**  
not everyone is an IT expert –  
different levels of usage / knowledge /  
skills (by age, education, country, etc)

# Challenges – more specifically

**Complexity of the topic:**  
technological complexity  
(what counts as AI?), but  
also many other angles to  
consider (societal, ethical,  
etc)

**How much of this is hype?**

**AI-powered technologies:**

Systems and tools which are  
using AI (to varying degrees),  
but are not branded as such –  
users may not be aware or  
have a choice

- focus on conscious use of AI
- focus on generative AI

# Question 1: Use of generative AI

Have you used any generative AI tools (e.g. ChatGPT, Copilot, Gemini, LLaMA, Midjourney, DALL-E) to create content like text, images, programming code, or videos in the last 3 months? *(tick one)*

a) Yes	<input type="checkbox"/>
b) No	<input type="checkbox"/>

*Generative Artificial Intelligence (AI)* can create new content, such as text, images, programming code, videos, or other data, based on available information and patterns it has learned from existing examples.

To generate this content, it requires input or a prompt by the user, such as asking it a question or providing instructions or a topic to focus on.

- **Focus on generative AI:** clear scope, conscious use
- **Addition of current examples** to improve identifiability
- **Explanatory note**
- **Trade-off:** some AI tools already in use are not covered or might not be recognised as such (AI assistants, AI-powered search, etc)

## Question 2: Purpose of use

*(Only for users of generative AI)*

**What was the purpose of using generative AI tools in the last 3 months?**

*(tick all that apply)*

<b>a)</b> For private purpose	<input type="checkbox"/>
<b>b)</b> For professional (work) purposes	<input type="checkbox"/>
<b>c)</b> For formal education (e.g. school or university)	<input type="checkbox"/>

- Modelled on similar question on online learning
- Categories may overlap (e.g. using AI for school or work without permission) – tick all that apply, left to the respondent

# Question 3: Reasons for not using generative AI

*(Only for non-users of generative AI)*

**What is the main reason for not using generative AI tools in the last 3 months?**

*(tick one)*

<b>a)</b> There was no need	<input type="checkbox"/>
<b>b)</b> I didn't know they existed	<input type="checkbox"/>
<b>c)</b> I didn't know how to use them	<input type="checkbox"/>
<b>d)</b> Concerns about privacy, security, or safety	<input type="checkbox"/>
<b>e)</b> Other	<input type="checkbox"/>

- Burden issue, therefore focus on main issue only

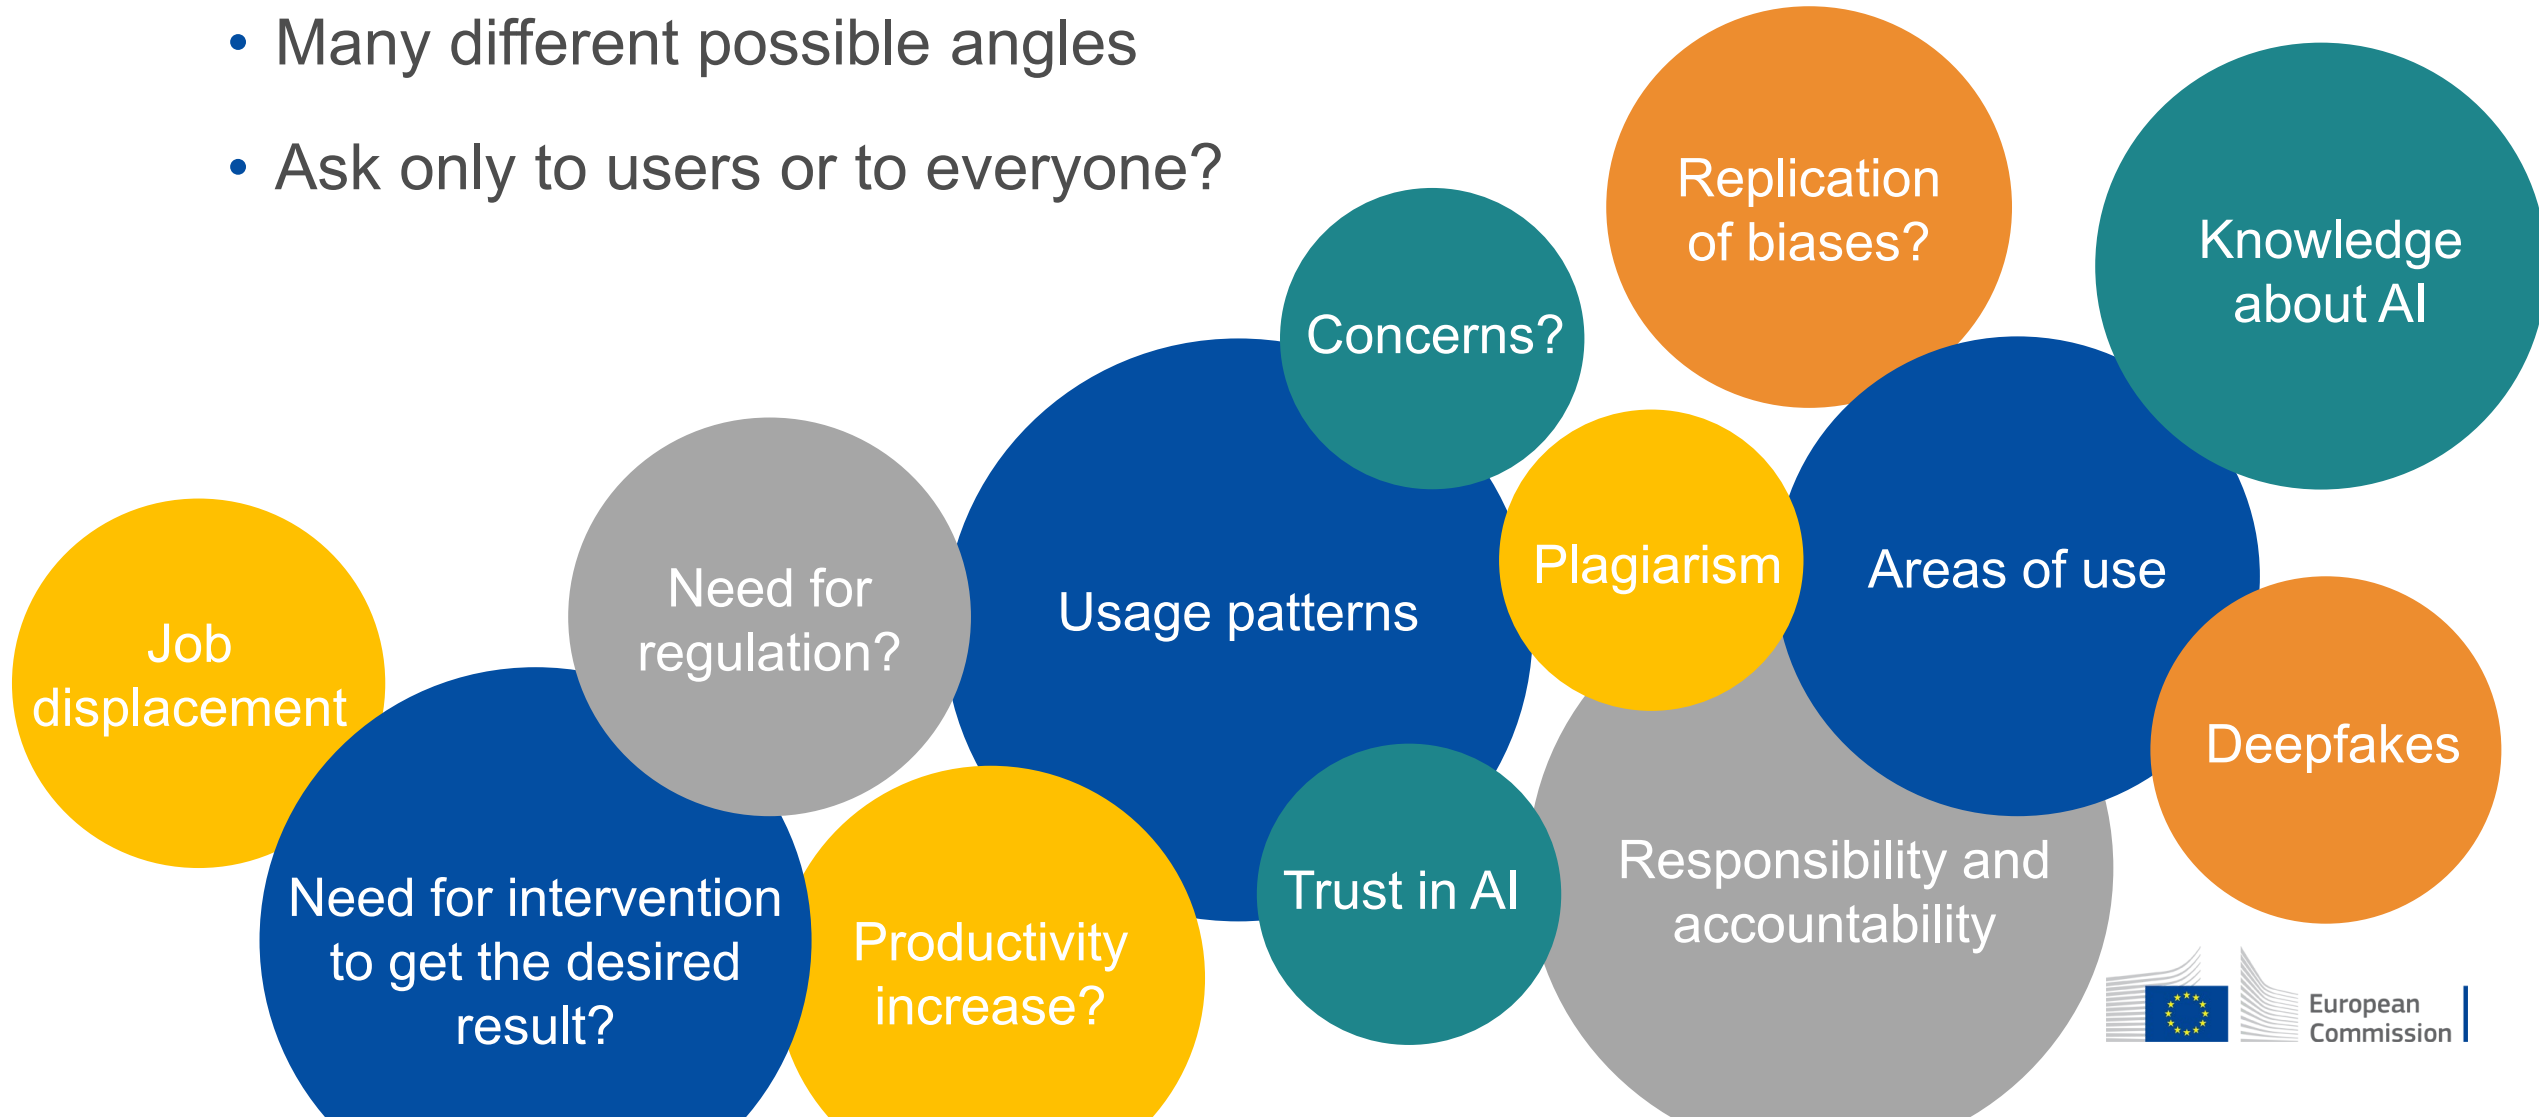

A close-up, high-angle shot of a blue integrated circuit (chip) mounted on a dark blue printed circuit board (PCB). The chip has the letters 'AI' in a large, glowing yellow font on its top surface. The PCB is covered with intricate orange and yellow circuit traces, and several small, glowing orange lights are scattered across the board, creating a futuristic, high-tech aesthetic.

# To summarize

- 3 questions
- targeting users and non-users, respectively
- **First EU-wide collection in 2025**
- **First data in December 2025**
- Some national data already this year

# Ideas for future questions

- Many different possible angles
- Ask only to users or to everyone?

# Way forward

- Monitoring of development – acceptance of shorter time series to stay up-to-date
- Ongoing discussions on whether to add additional questions and if so, on which aspect/topic
- Balance between adding new angles and keeping the questions clear and understandable for (all!) respondents
- Currently a “hot topic”, but only one of many needs to be covered by the survey

# Thank you
