

Information on Satellite Services in Colombia

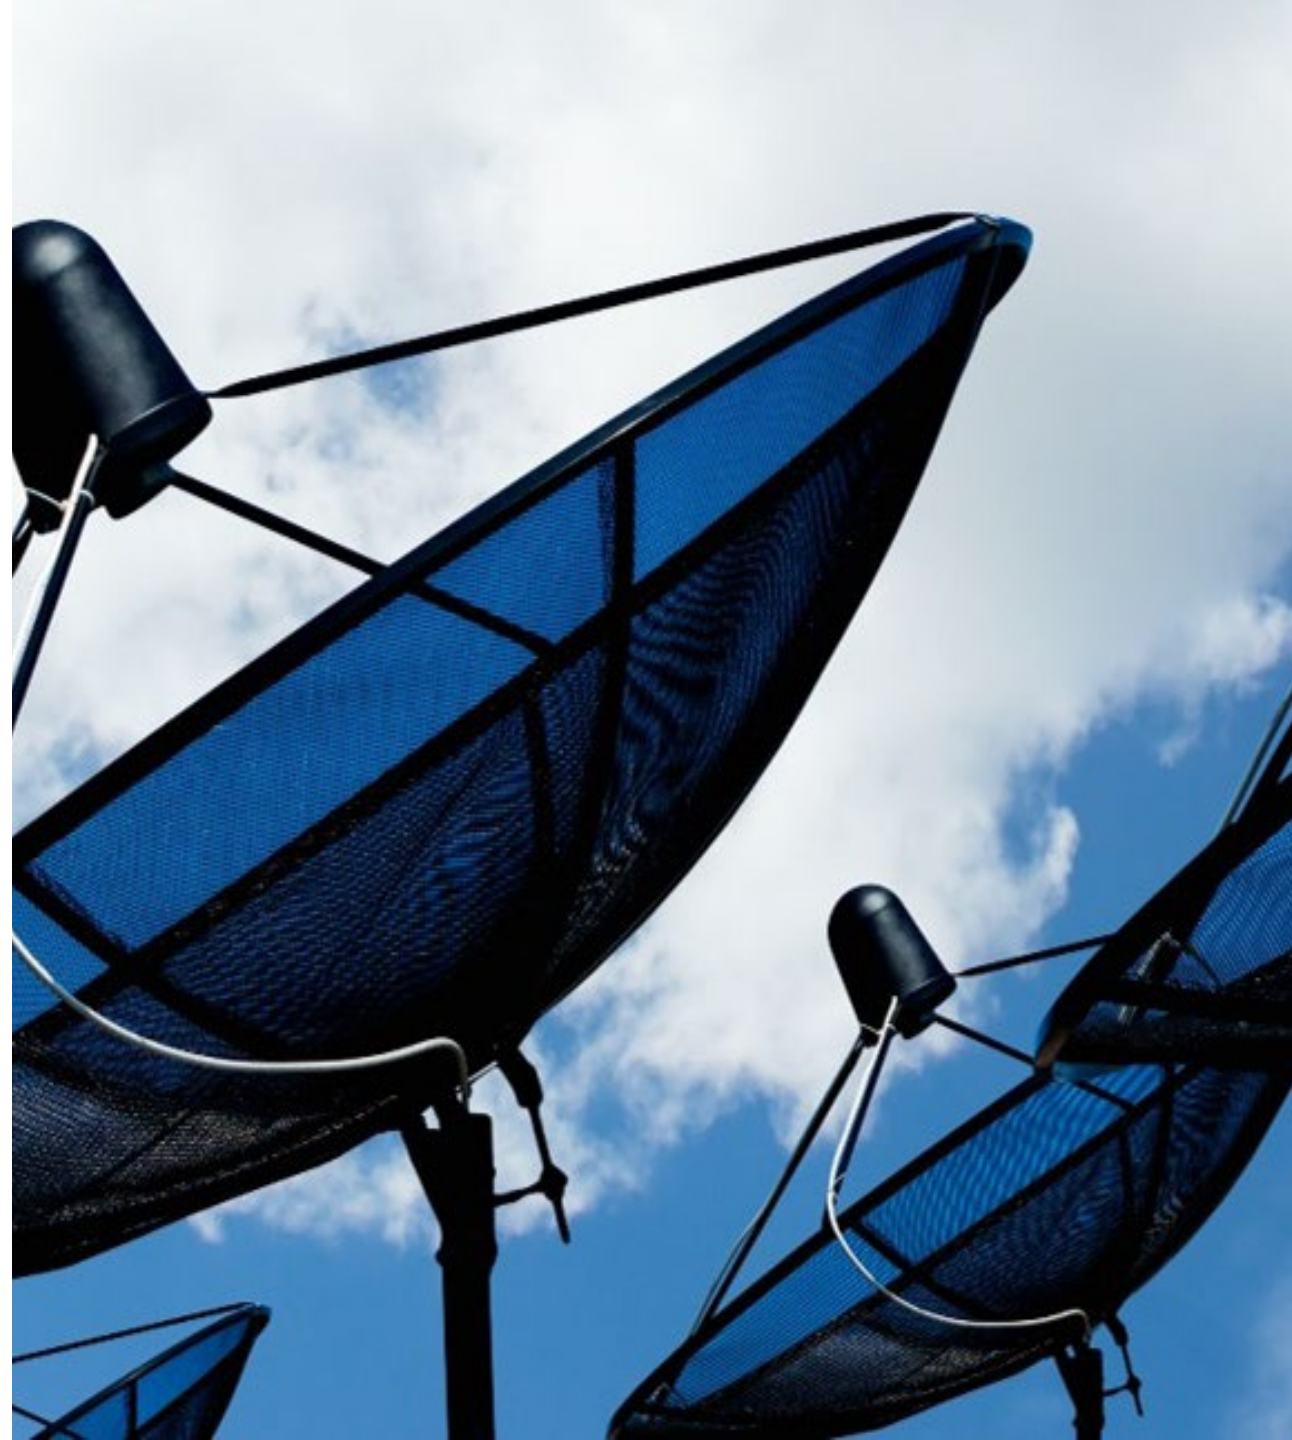

Indicators

September 2026

Introduction:

- This document presents an overview of satellite Internet access services in Colombia, with an emphasis on Low Earth Orbit (LEO) technology.
- It reviews the regulatory context, the evolution of reported accesses, speeds by operator, and municipal coverage.

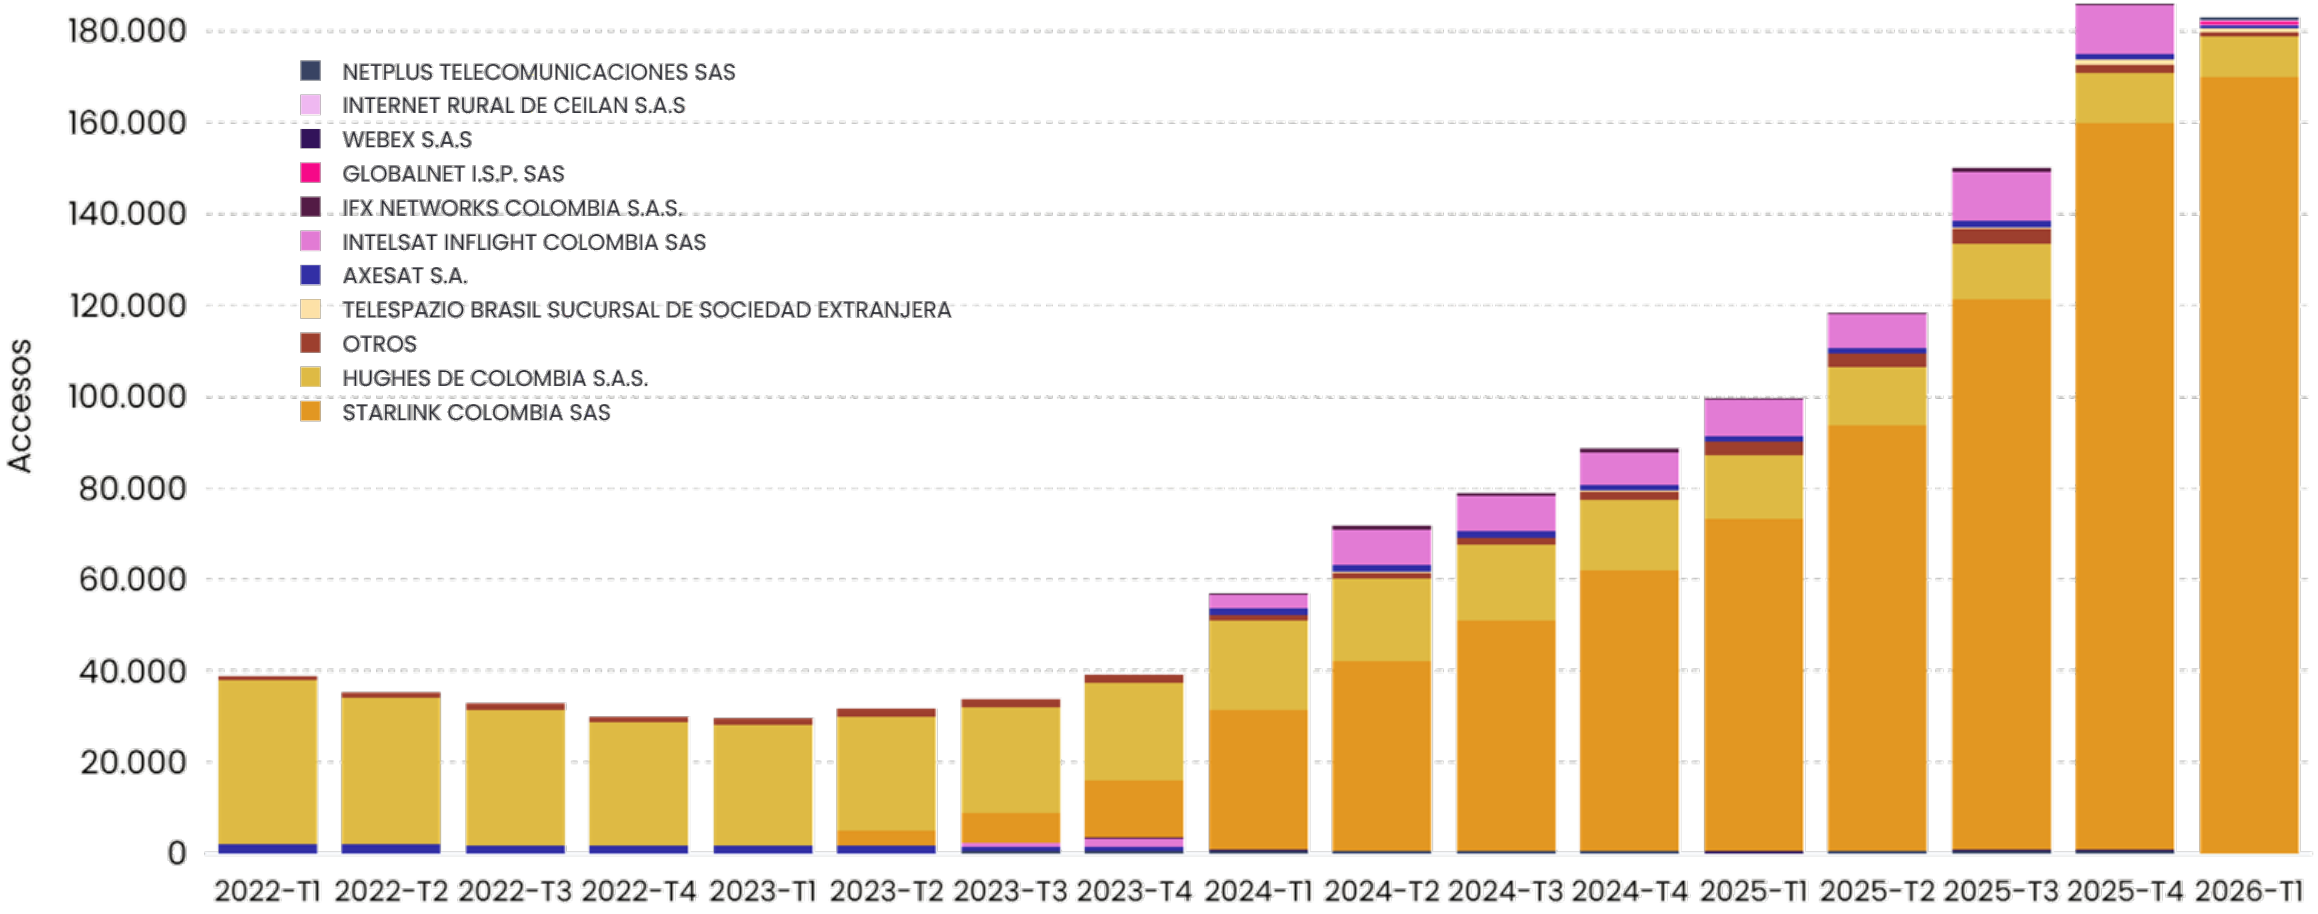

Regulatory context:

- Operators with satellite technology report their accesses to the CRC, broken down by municipality and download and upload speeds.
- As of 2026, a distinction is made between GEO (Geostationary Earth Orbit) and LEO (Low Earth Orbit), pursuant to CRC Resolution 7811 of 2025.

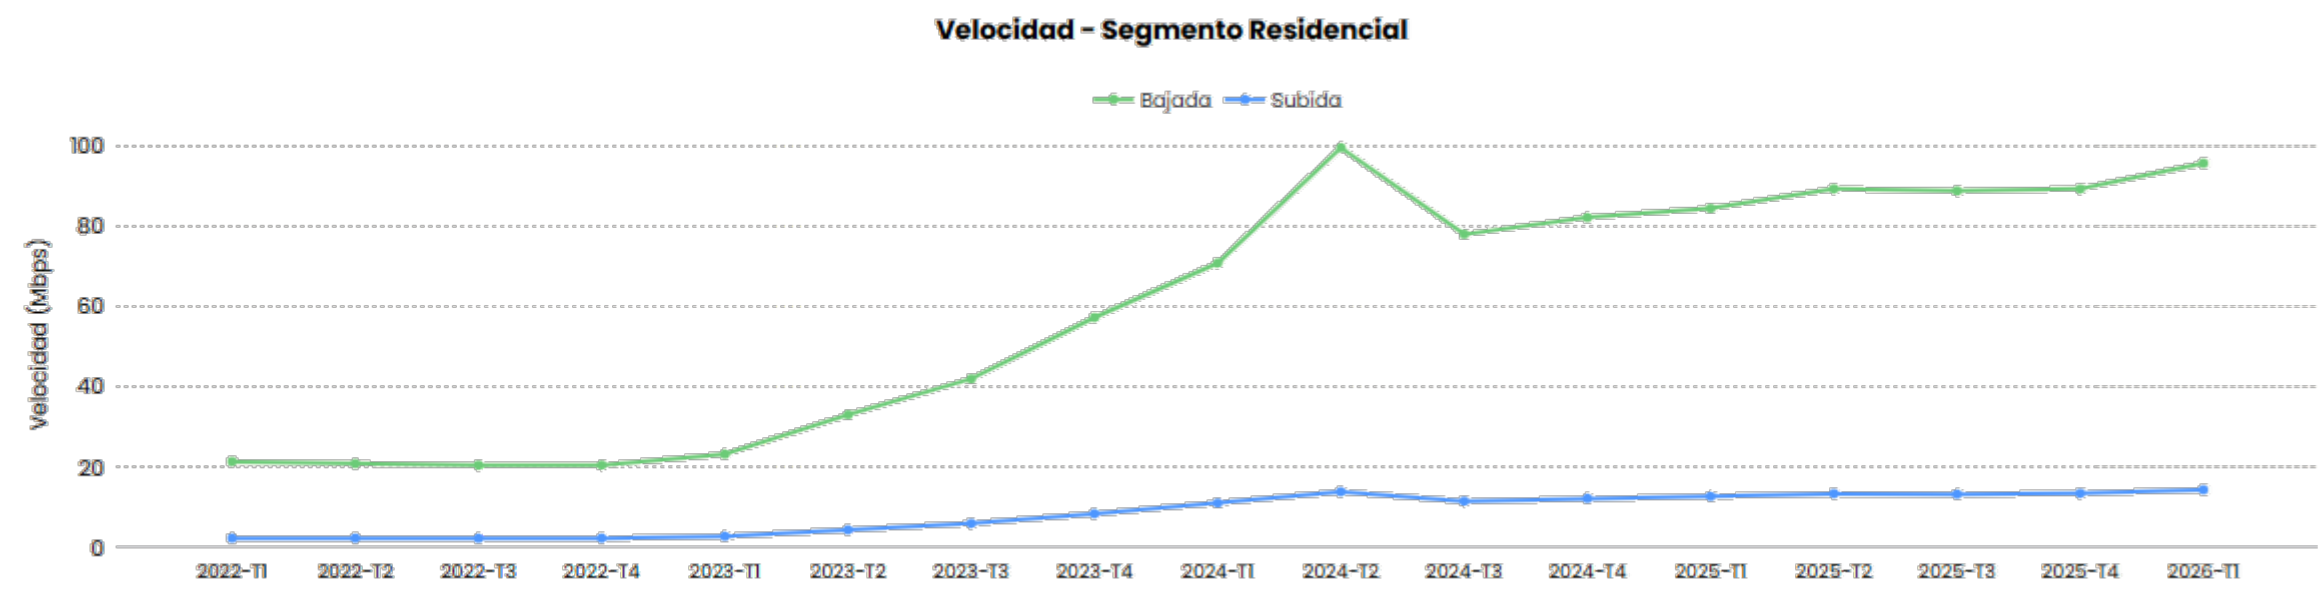

Information reported on satellite technology:

The number of accesses has grown significantly compared to other operators, from 31.434 in 2024-Q1 to 170.036 in 2026-Q1 (5.4 times).

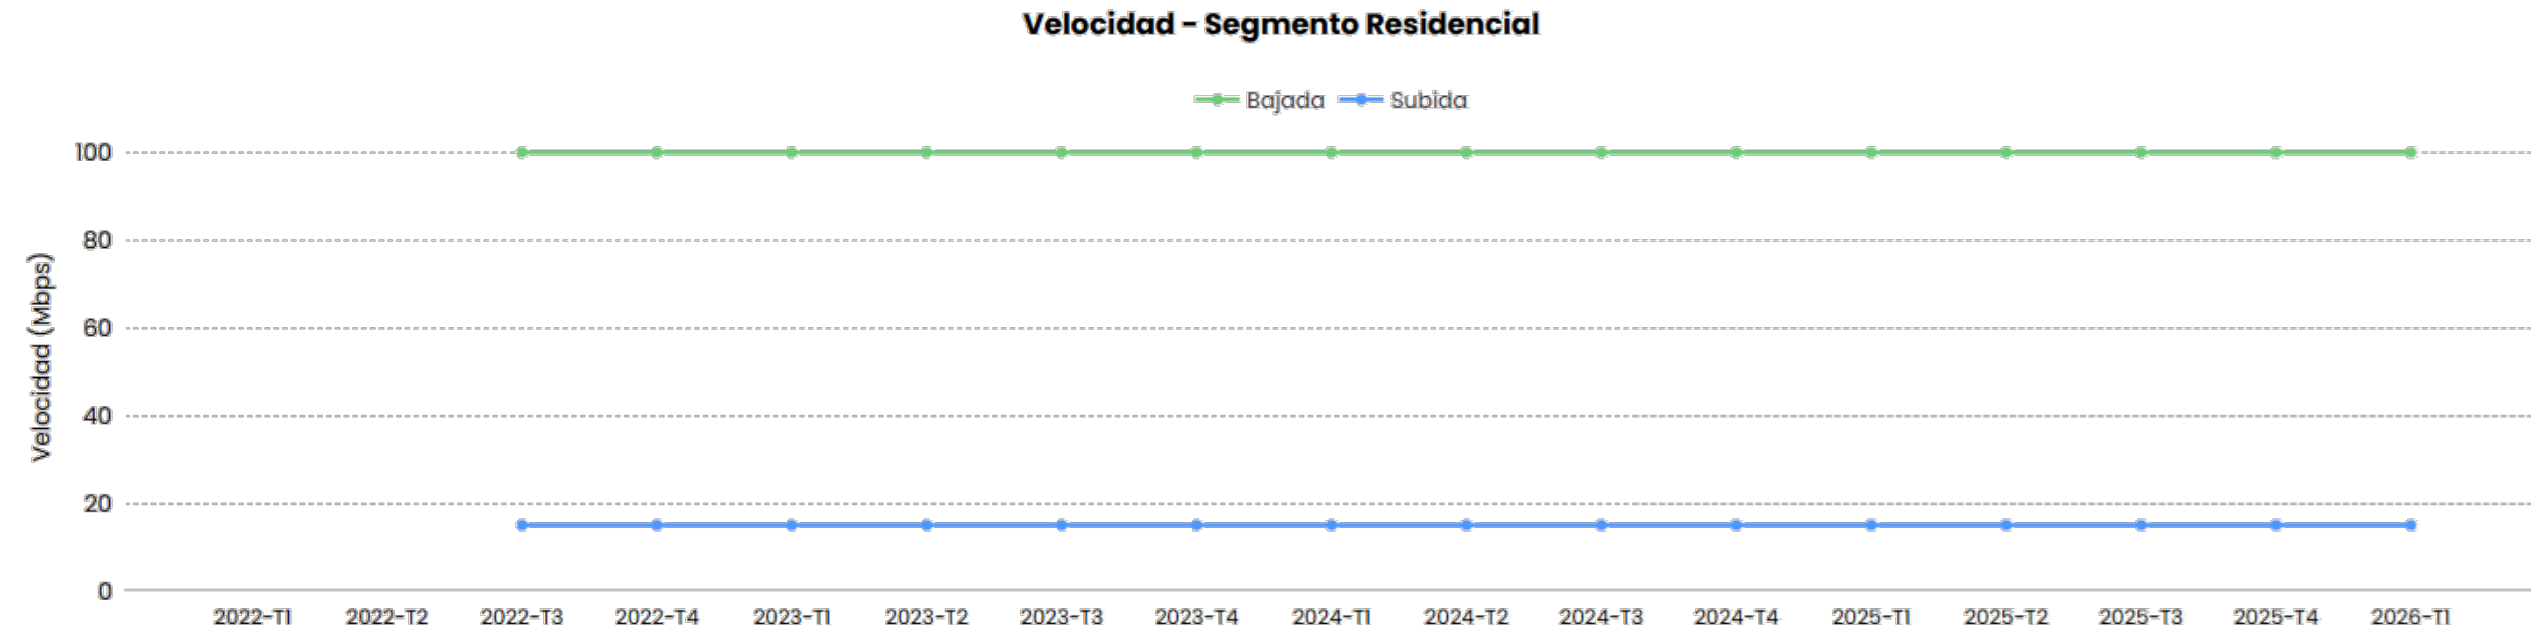

Operator speeds in Colombia:

Satellite technology, relative to other technologies, represents 2%. In 2025, there was a growth of 112% compared to 2024

Speeds of the largest operators in Colombia:

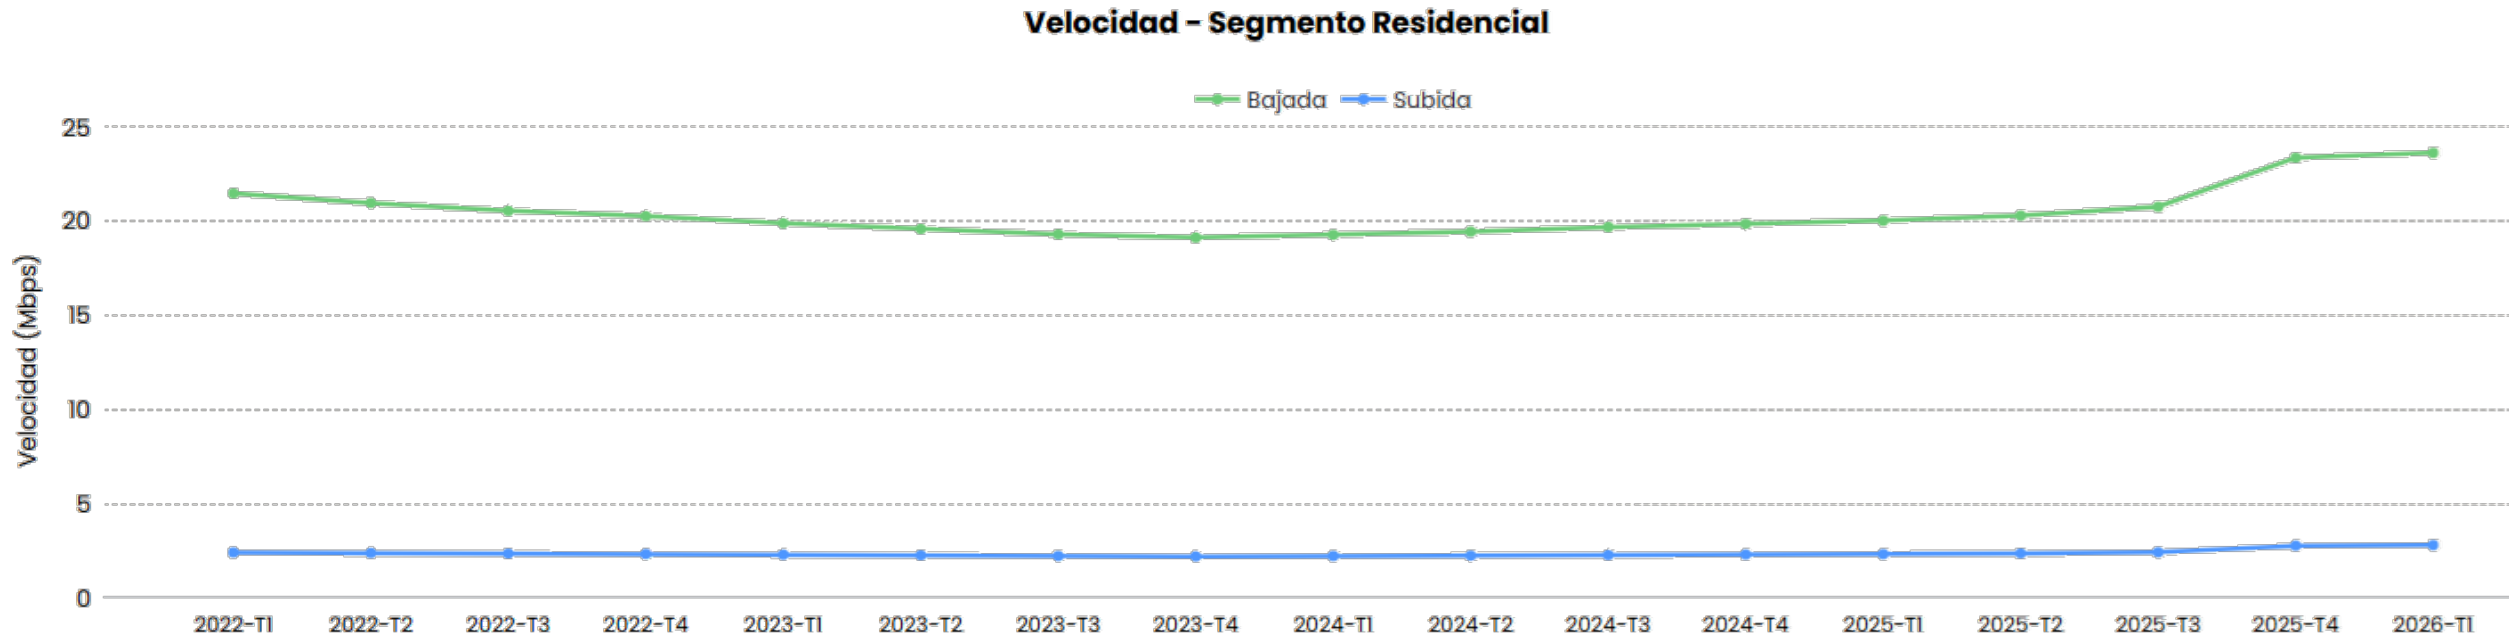

Starlink Colombia SAS:

Starlink reports constant speed across all periods: 100 Mbps download and 15 Mbps upload

Speeds of the largest operators in Colombia:

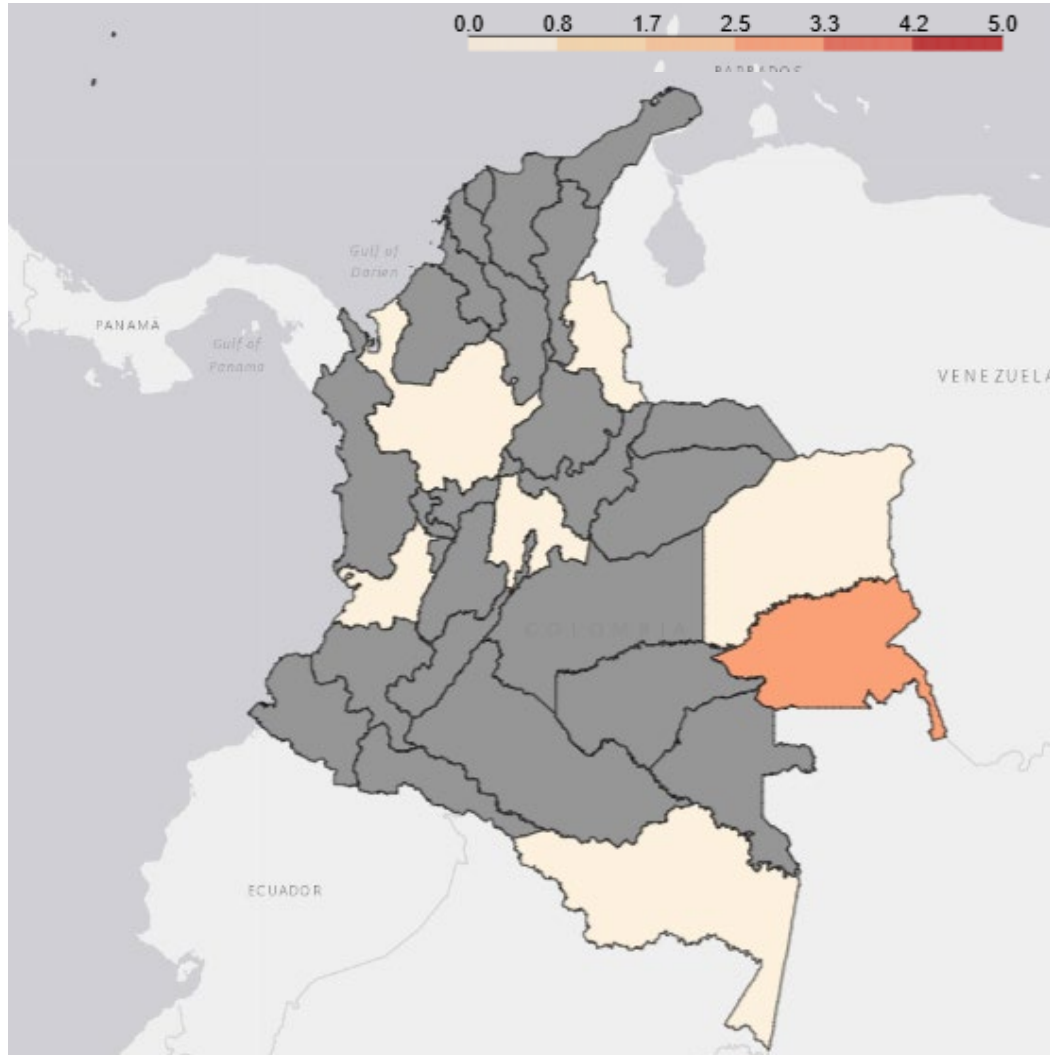

Hughes de Colombia SAS:

Stable download speed around 20 Mbps, with a slight increase starting in 2025-Q4; upload speed constant at around 2-3 Mbps.

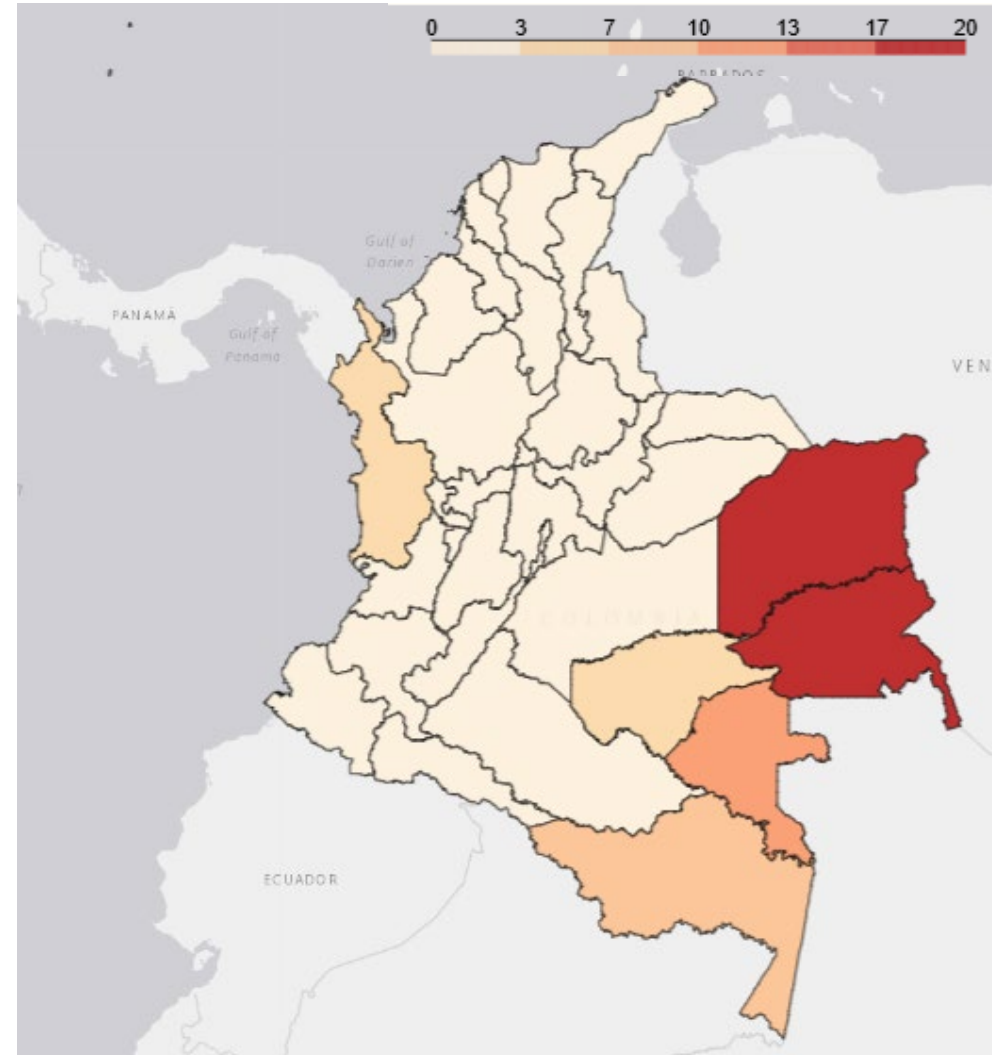

Municipalities of Starlink Colombia SAS

2023-Q1

2026-Q1

Penetration: residential accesses per 100 households.

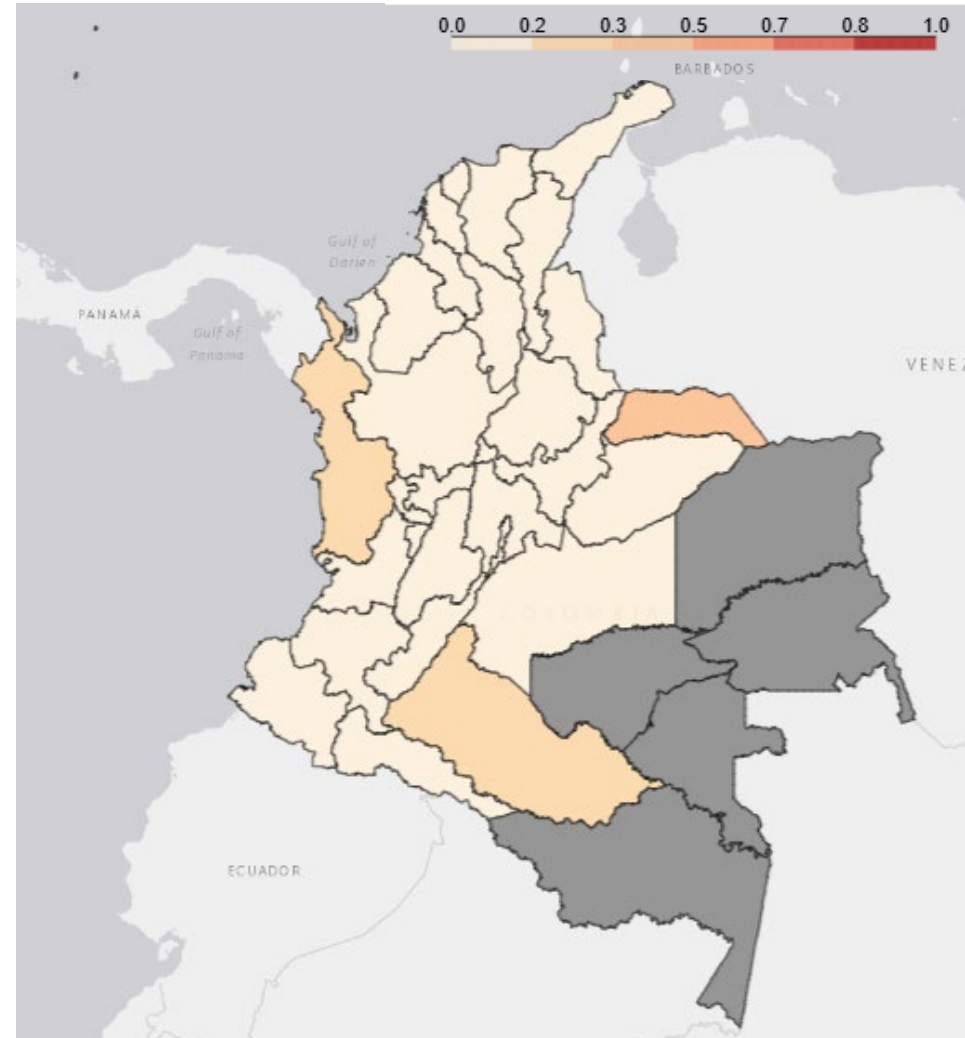

*Gray areas:
municipalities
with no coverage
reported by the
operator (no
accesses
recorded during
the period).*

Municipalities of Hughes de Colombia SAS: 2023-Q1

2026-Q1

Penetration: residential accesses per 100 households.

*Gray areas:
municipalities
with no coverage
reported by the
operator (no
accesses
recorded during
the period).*
