

Developing a Cost Ledger

By: John Thompson

OBJECTIVE

To prepare the trial balance of accounts, of a financial accounting general ledger, for use as input data, for a costing model.

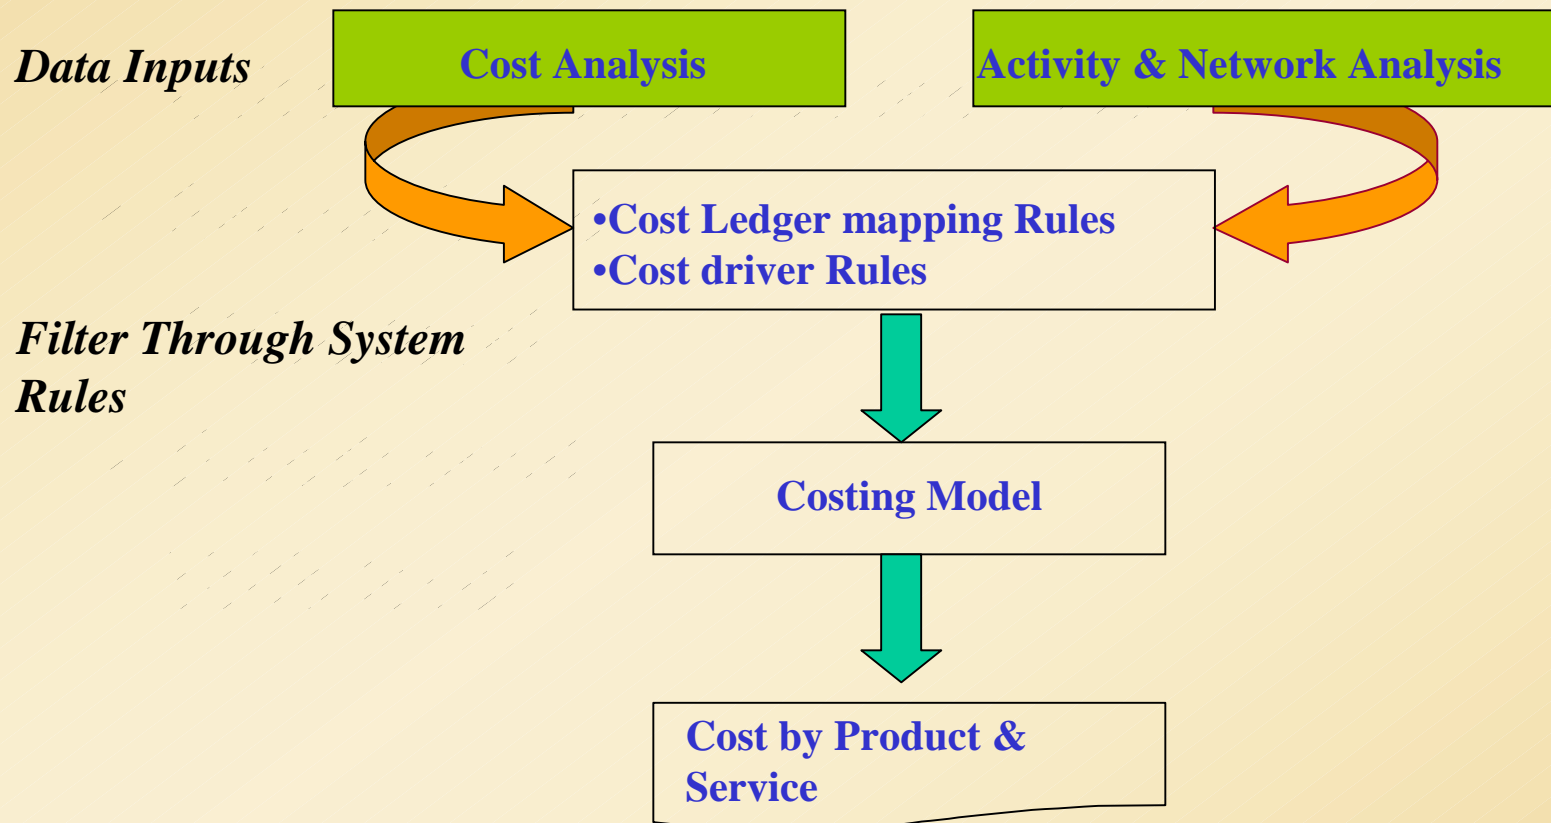

Defining the problem

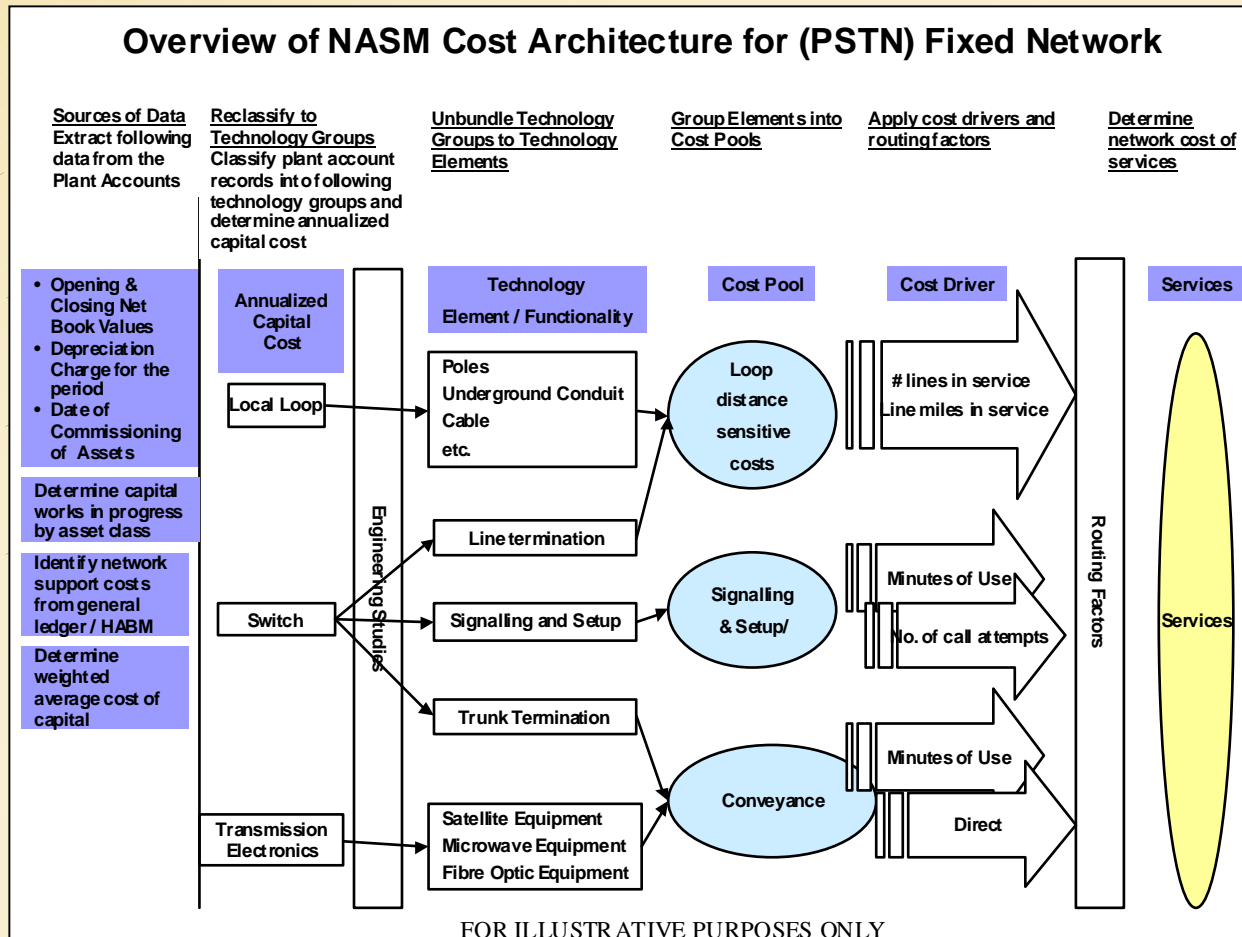

- **WTO Agreement**
- **Principle of Agreement - cost based pricing**
- **Cost modeling prerequisite**
- **All telecom organizations faced with the problem of using data, from financial accounting sources, to input to cost models.**

Standard Modeling Structure

Modeling the Network Costs

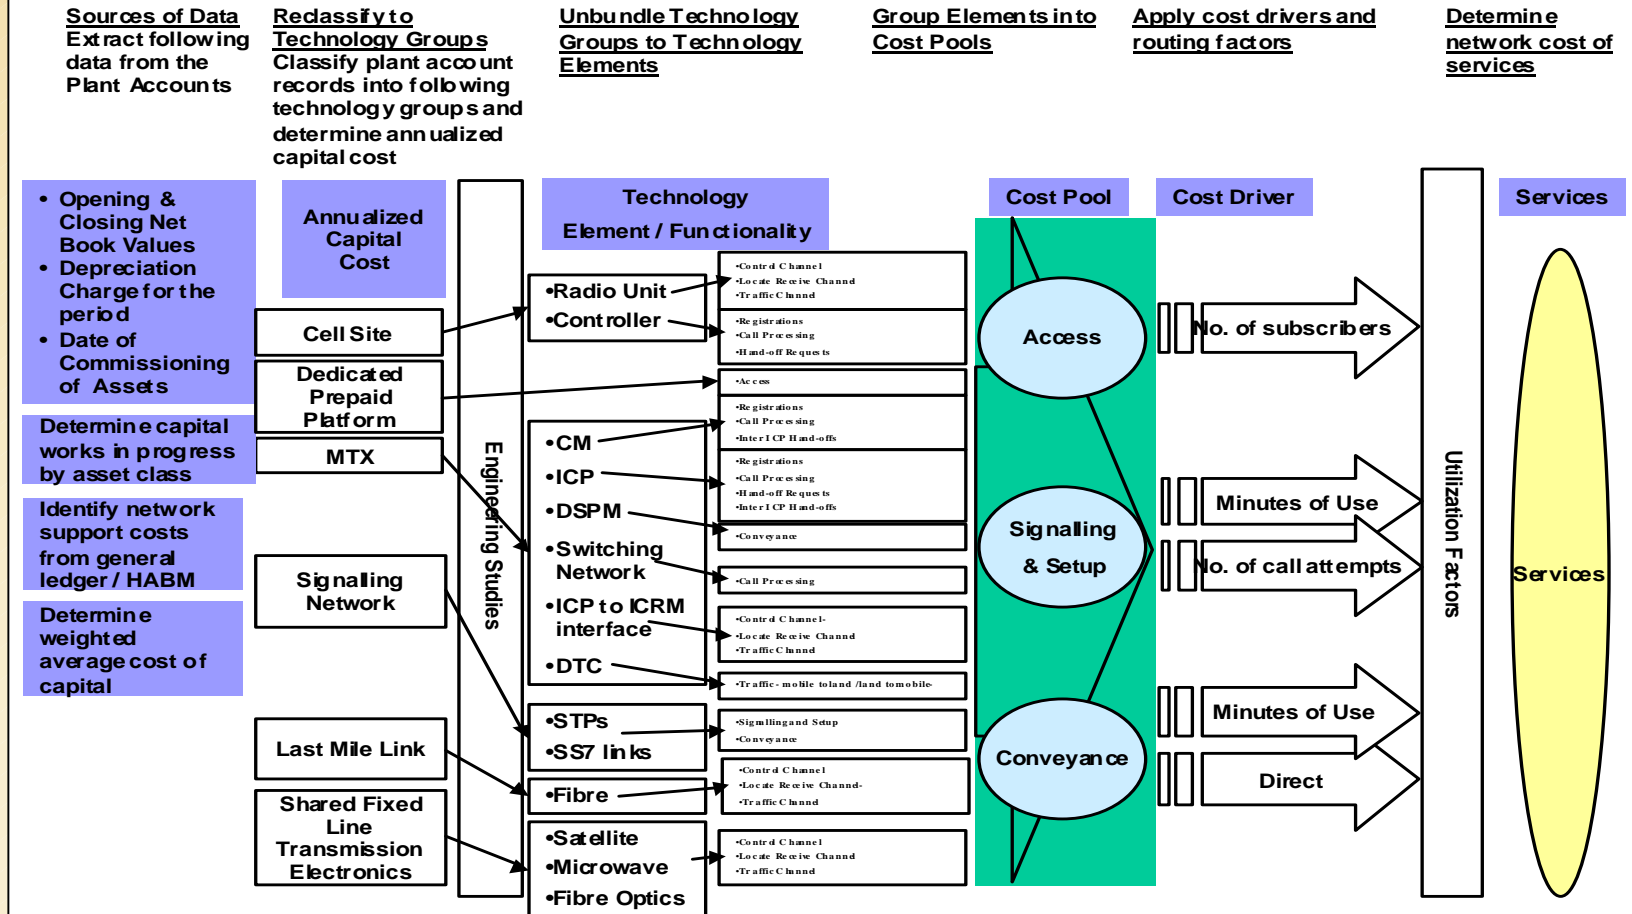

- Using FA Data

Modeling the Network Costs

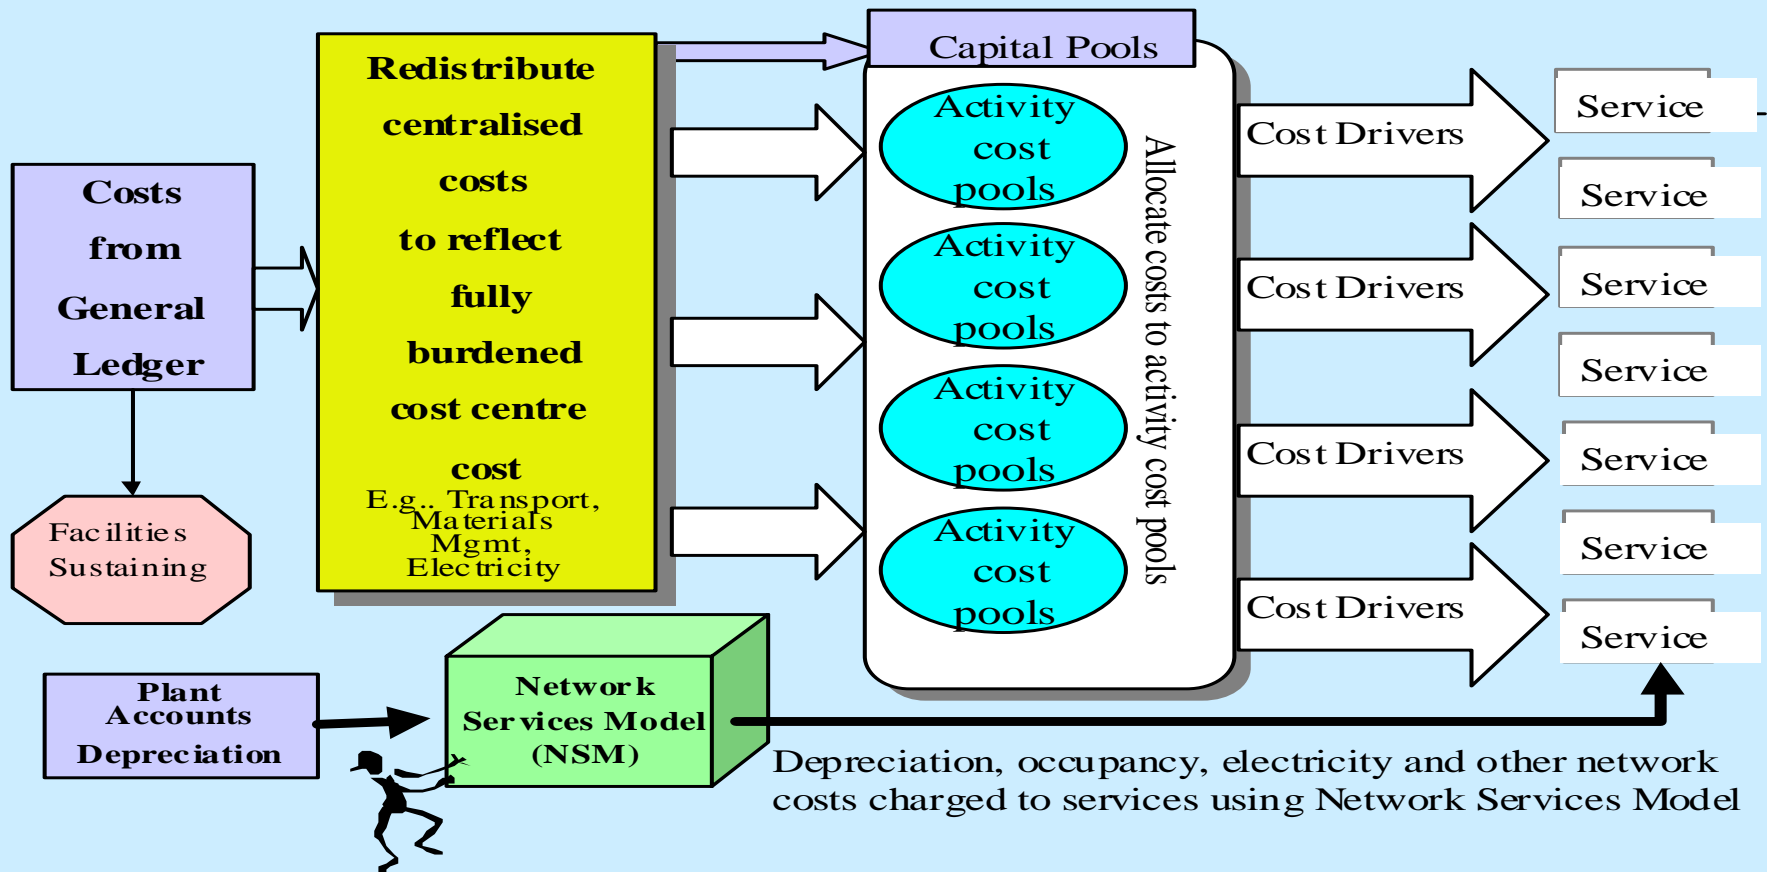

- Using FA Data

Overview of NASM Cost Architecture for Mobile Network

Modeling GL Recurrent Expenses - Using FA Data

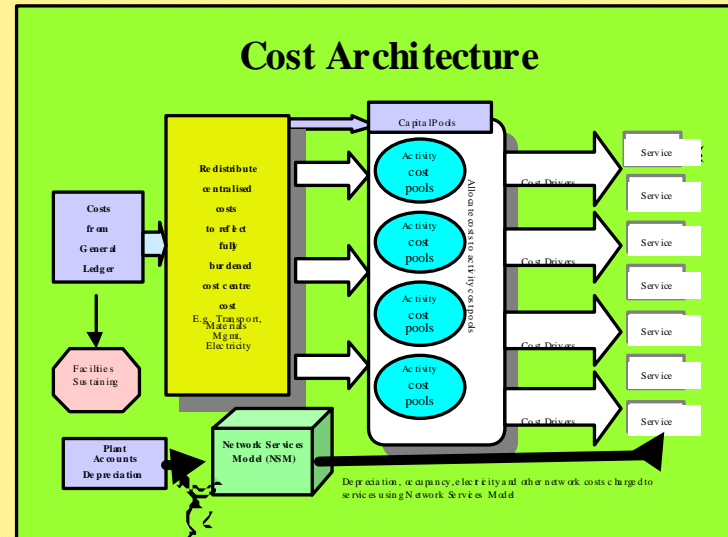

Cost Architecture

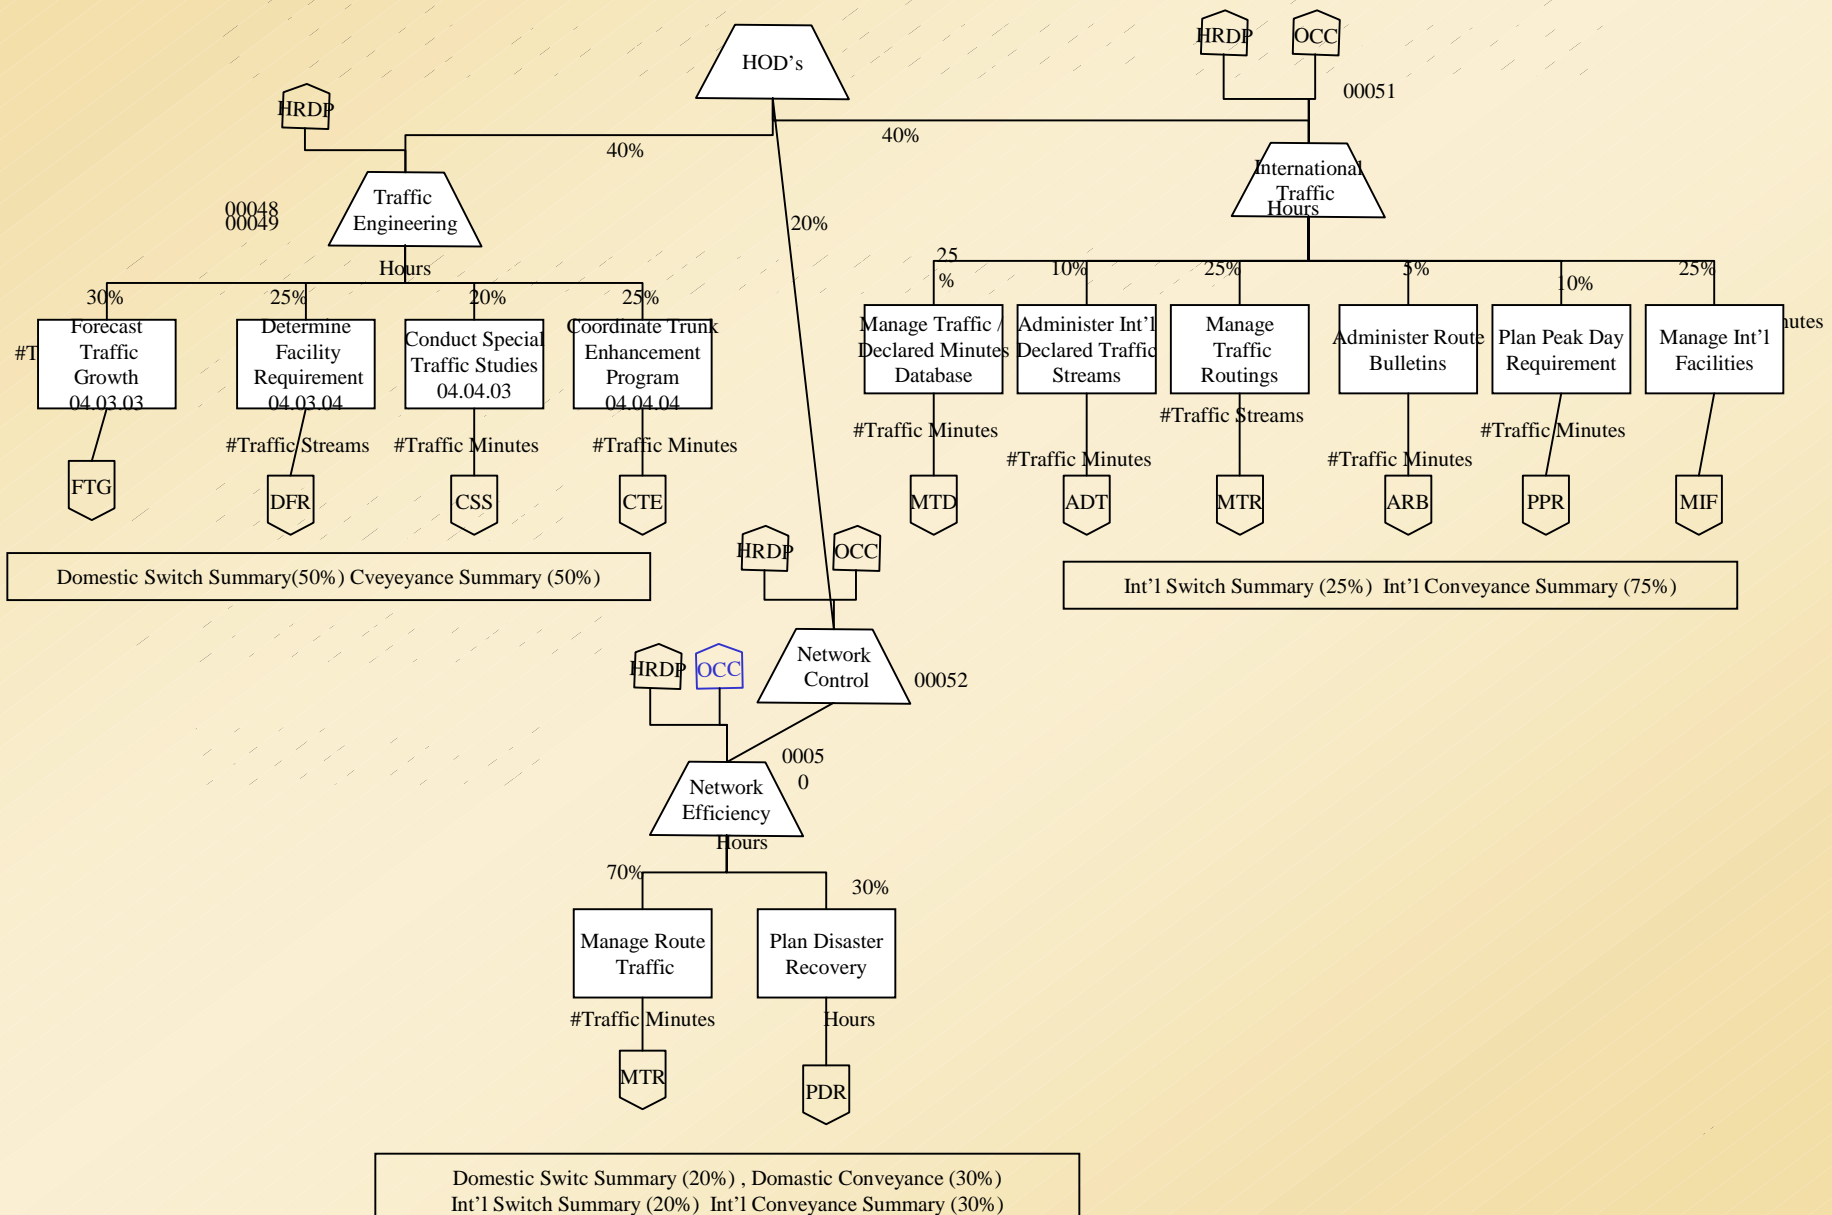

Analysis of General Ledger

Analysis of General Ledger

- Effect analysis of general ledger costing structure and content as primary factor to costing system.
- Develop preliminary assumptions to:
 - identify centralized general ledger cost
 - allocate centralized costs to arrive at fully burdened cost center costs
- Develop allocations/costs assignment rules

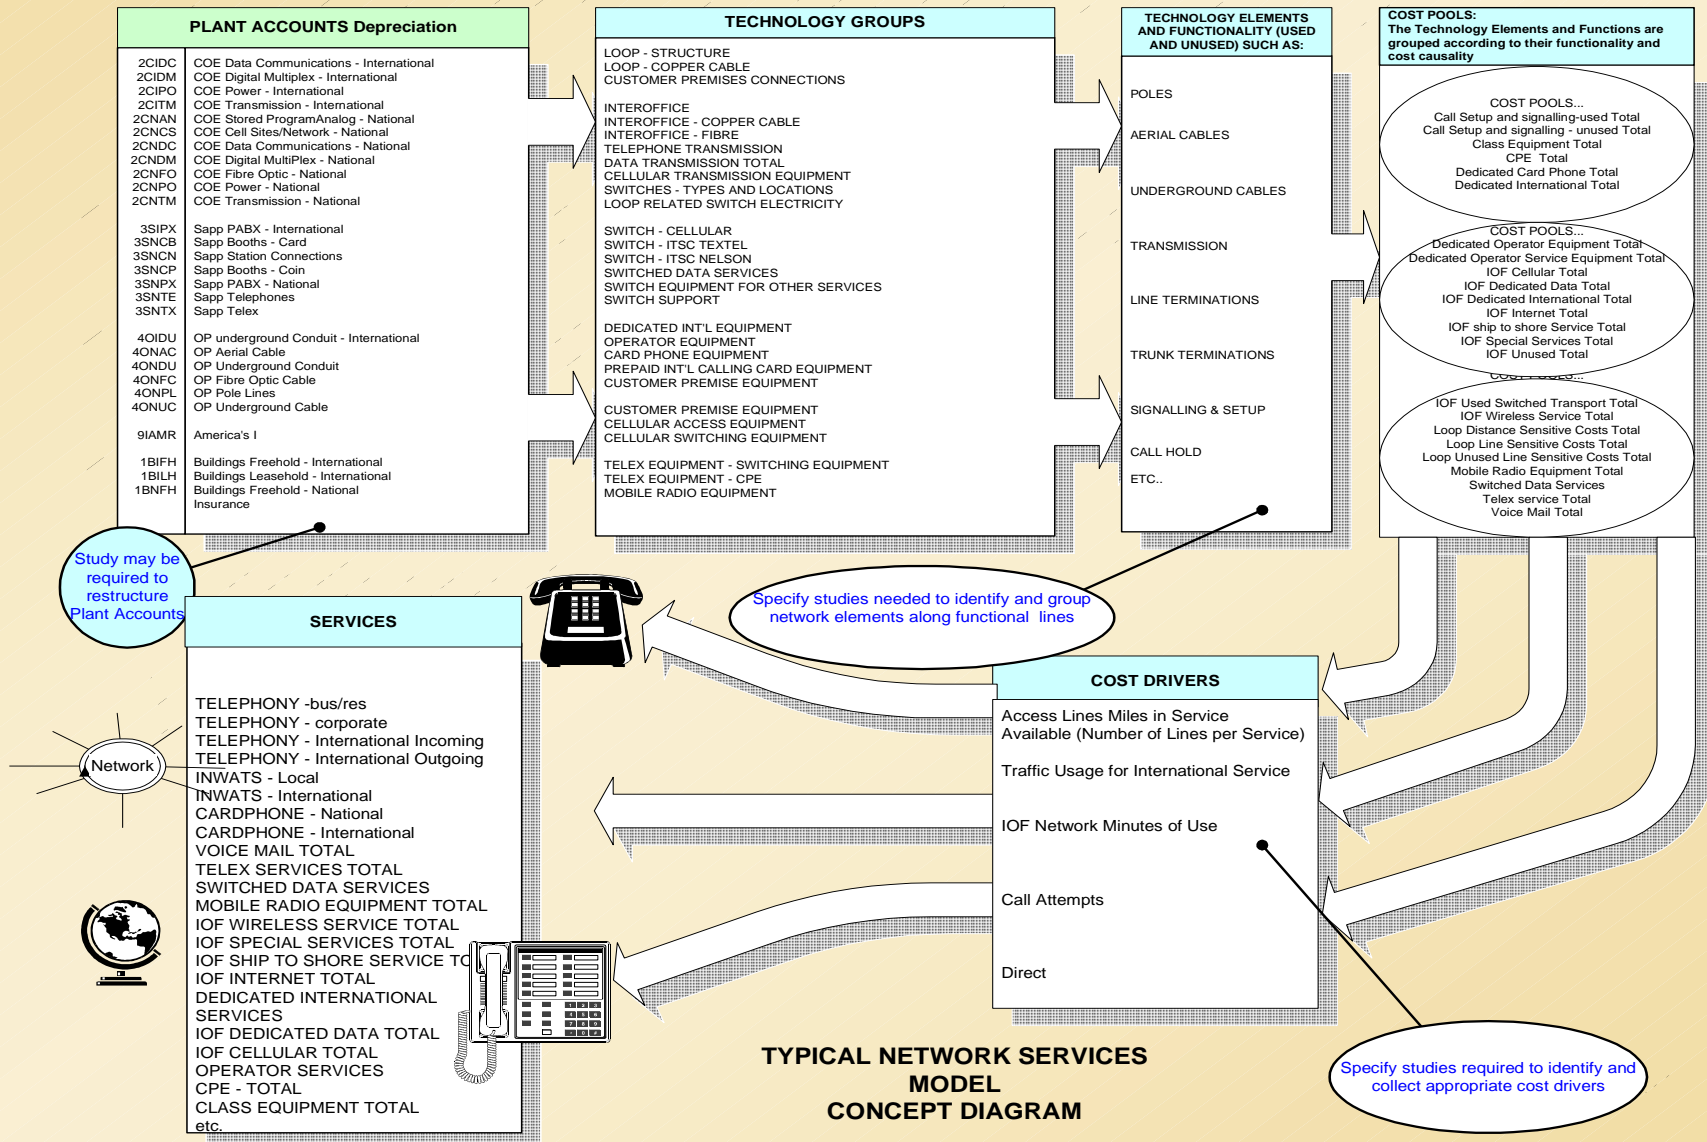

Modeling GL Expenses - Example

Network Costing model concept overview - Using

FA Data

General Consensus

**Financial accounting
data is not readily
compatible with the
needs of cost models.**

Alternative Solutions

- Develop a separate cost ledger posted from the same data source, in tandem with Financial Accounting.
- Start from the Financial Ledger and drive directly to services using ABC engine.
- Start with Financial ledger and convert to cost ledger format before driving to services.

Exploring Alternative 1 - Costing Ledger Approach

Alternative 1

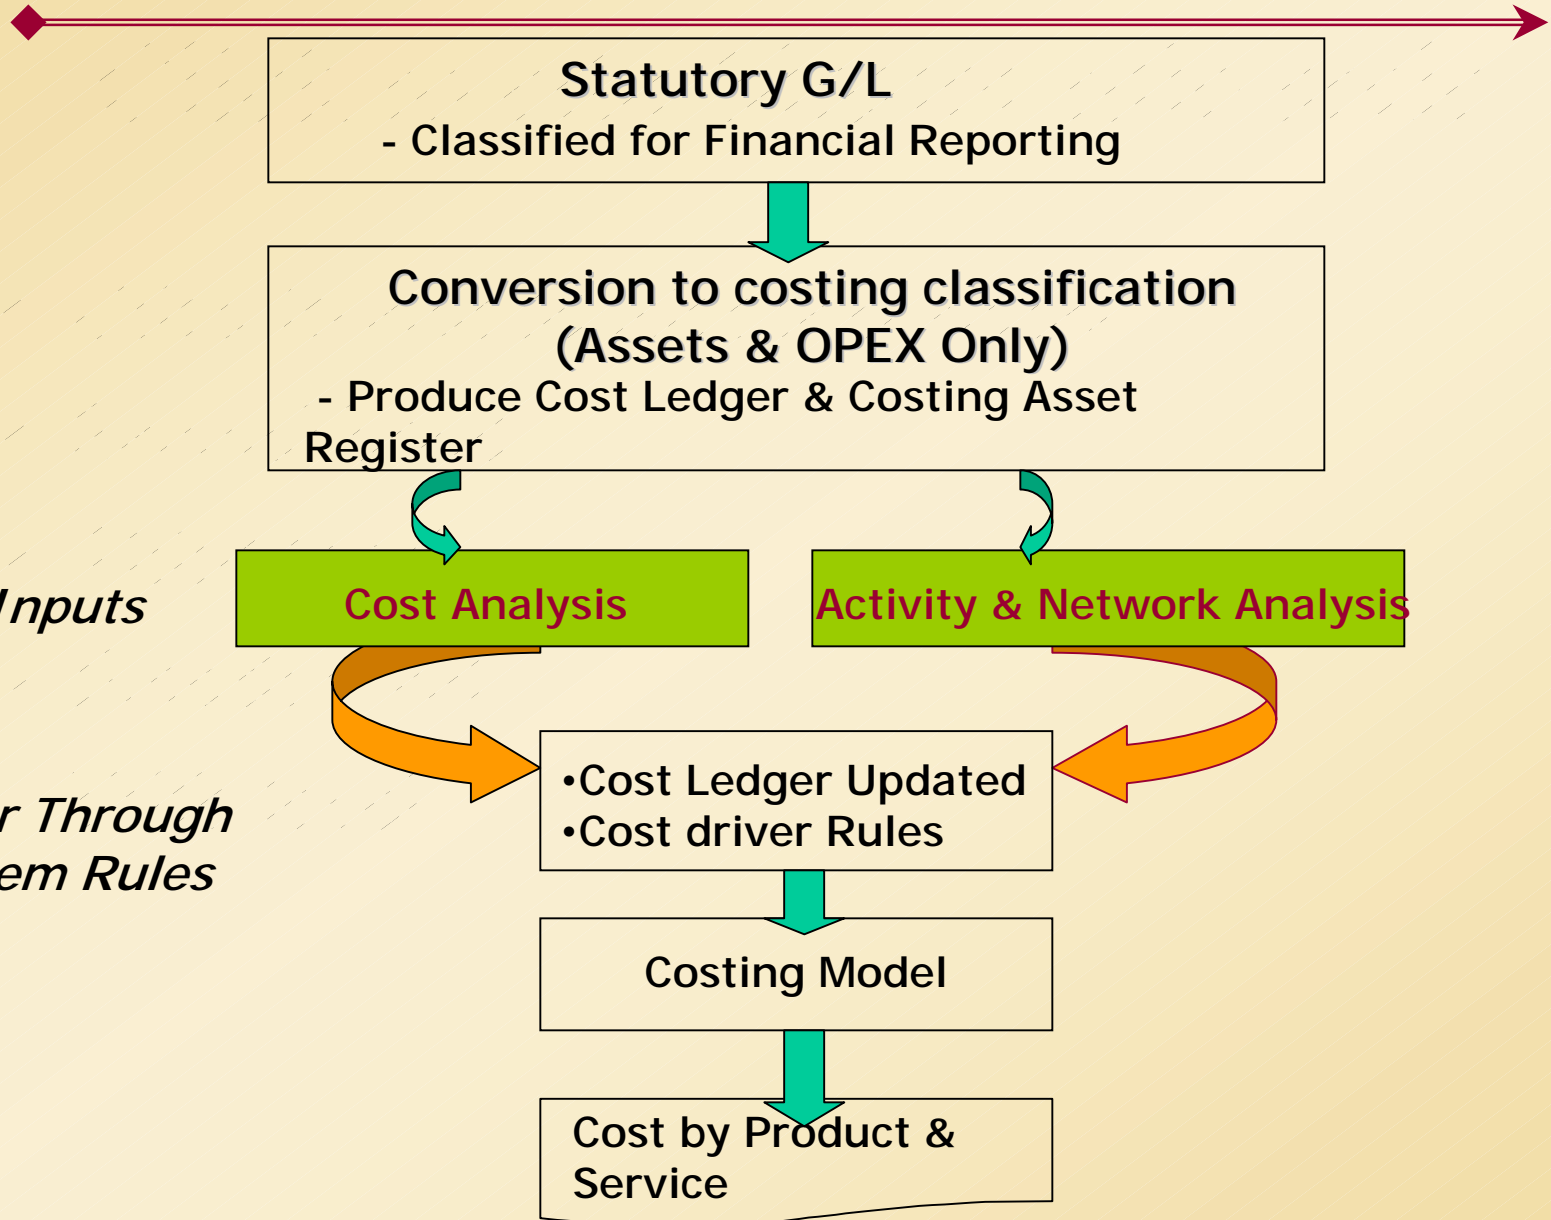

Develop a separate cost ledger posted from the same data source, in tandem with Financial Accounting.

Challenges

- **Requires participation from a wider cross section of the organization**
- **Data capture procedures must be continuous and need proper streamlining**

Modeling Structure

Data Inputs

Filter Through System Rules

Statutory General Ledger & Cost Ledger - Comparison

Account Category	Statutory Ledger	Cost Ledger
Current Assets	Represented	Individual accounts not represented
Materials and Supplies	represented	Represented
Net Working Capital	Not represented as an individual account	Represented as a single account (net current assets – excluding materials and supplies, minus, net current liabilities)
Fixed Assets	Represented	Represented
Amortisable-Assets (tangible and intangible)	Represented	Represented
Current Liabilities	Represented	Individual accounts not represented
Provisions and Deferrals	Represented	Represented
Long Term Liabilities	Represented	Not represented
Shareholders Equity	Represented	Not represented

Account Classifications - Financial & Costing

Account Category	Statutory Ledger	Cost Ledger
REVENUES	Represented	Not represented
OPERATING EXPENSES <ul style="list-style-type: none">• Salaries & Allowances• Subsistence & Overtime• Pension• Maintenance & Repairs• Contracts• Rentals• Electricity• Insurance• Training & Foreign Travel• Stationary• Janitorial Services• Advertising	Represented	Represented but different classifications required

• Account Classifications in Financial Ledger not conducive to required classifications for costing ledger

• This poses extremely difficult and time consuming task of conversion

Financial -vs- Costing - Classifications

Financial Accounting
Classification - By
Type of Expense

Vs

Cost Accounting
Classification - Functional

- Salaries and Allowances
- Subsistence and Overtime
- Pension
- Maintenance and Repairs
- Contract
- Rentals
- Electricity
- Insurance
- Training & Foreign Travel
- Stationary
- Janitorial Services
- Advertising
- Other operating expenses

- Plant specific Expenses
- Plant non-specific Expenses
- Access network expenses
- Marketing
- Corporate operating expenses
- Secondary services
- Retail related Services

Each of these can be further divided in sub accounts

Plant Specific Expenses -

Further Broken down

Plant Specific Expenses

Related sub accounts

- **Network support expenses**
- **General Support expenses**
- **Central office switching expenses**
- **Operator systems expenses**
- **Central office transmission expenses**

Financial G/L Asset Categories - FAR

Asset Class	Category	Description

Fixed Asset Register - Costing

Ledger Structure

Asset Category	Level 2	Level 3	Level 4
Cellular	Cellular -Switching		
	Cellular - Transmission		
	Cellular – Cell site		
	Cellular – Power		
	Cellular - Buildings		
	Cellular – Interconnect Equip.		
	Cellular - Land		
	Cellular - Towers		

- Costing Ledger constructed along technologies and can undergo several levels of disaggregation based on elements, functionality and even services.
- Easier to drive costs to services based on how these services consume the various activities/functionalities performed by the network elements

Fixed Asset Register - Costing Ledger Structure

Central Office Equipment Reclassification - Example

Asset Code	LEVEL 1	LEVEL 2	LEVEL 3	LEVEL 4
25	CENTRAL OFFICE EQPT.			
26		COE - Digital International Gateway		
27			International Gateway Switch - Nelson	
28			International Gateway Switch - Couva

203				
204				
205				
206				

Fixed Asset Register

Costing Ledger Structure

Outside Plant Equipment Reclassification - Example

Asset Code	LEVEL 1	LEVEL 2	LEVEL 3	LEVEL 4
208	OUTSIDE PLANT			
209		Outside Plant - Interoffice		
210			OP Aerial Fibre Cable	
211			OP Underground Fibre	
212			OP Underground Conduit - National	
213			OP Underground Conduit - International	
214			OP Pole System	
215		Outside Plant - Local Loop Feeder		
216			OP Aerial Cable Metal	
217			OP Aerial Fibre Optic Cable	
218			OP Underground Cable Metal - Ducted	
219			OP Underground Cable Metal - Direct Buried	
220			OP Underground Fibre Cable - Ducted	
221			OP Underground Fibre Cable - Direct Buried	
222			OP Underground Conduit System	
223		Outside Plant - Local Loop Distribution		
224			OP Aerial Cable Metal	
225			OP Aerial Fibre Optic Cable	
226			OP Underground Cable Metal - Ducted	
227			OP Underground Cable Metal - Direct Buried	
228			OP Underground Fibre Cable - Ducted	
229			OP Underground Fibre Cable - Direct Buried	
230			OP Underground Conduit System	
231			OP Pole System	
232		Access Network - Wireless Local Loop		
233		Access Network - Pair Gain Systems		
234		Access Network - FTTC		
235		Access Network - Subscriber Radio Systems		
236				

Alternative 2

◆—————→
Start with Financial ledger and convert to cost ledger format before driving to services.

Challenges

- **Finding an appropriate methodology**
- **Reclassification from one to the other can be difficult to set up and carry out**
- **Process could be time consuming**
- **Not Flexible**

Challenges - Options 3

◆ **Start from the Financial Ledger and drive directly to services using ABC engine.**

Challenges

- **determining/collecting relevant drivers from company databases**
- **Account structure/ and the classification of the expenses require further disaggregation in order to apply appropriate/single drivers**
- **Development of ABC is time consuming- Activity and cost driver analysis, GL mapping rules**

Adopting Option 1 - Costing Ledger Approach

Prerequisite to

Network Cost Modeling

- Network asset numbering scheme
- Physical verification of assets, and, comparison with their entry in the Asset Register, with respect to: description, classification and asset life
- Reconciling and adjusting asset costs as per Asset Register with asset costs as per General Ledger, considering asset class and accumulated depreciation

Reconciling Physical count

with Asset Register

- Update and amend Asset register with the results of a physical verification exercise. Complete Asset identification labeling and numbering.
- Assets found in the field that are not traceable to the asset register should be, noted for examination.
- Conversely, assets in the Register not found in the field must also be noted for examination.
- Having satisfied examination of the above assets decisions must be made as to their final treatment.

Reconciling Asset Register with GL Asset Accounts

- All decisions must be supported by any available and verifiable documentary evidence, or, by management statements as to their agreed dispensation.
- Dovetail asset costs as per G/L with the asset costs as per Asset Register, by category – at this stage all fully depreciated assets not still in use should be disposed using the formal accounting treatment for disposal of assets.
- Any excess or deficit resulting from the comparison of assets in the Register to assets in the field must, be treated from an accounting perspective – write off excess or conversely, include the deficit to the value - that brings the physically verified assets cost equal to that of the G/L asset account balances.

Way Forward -

Costing Ledger Approach

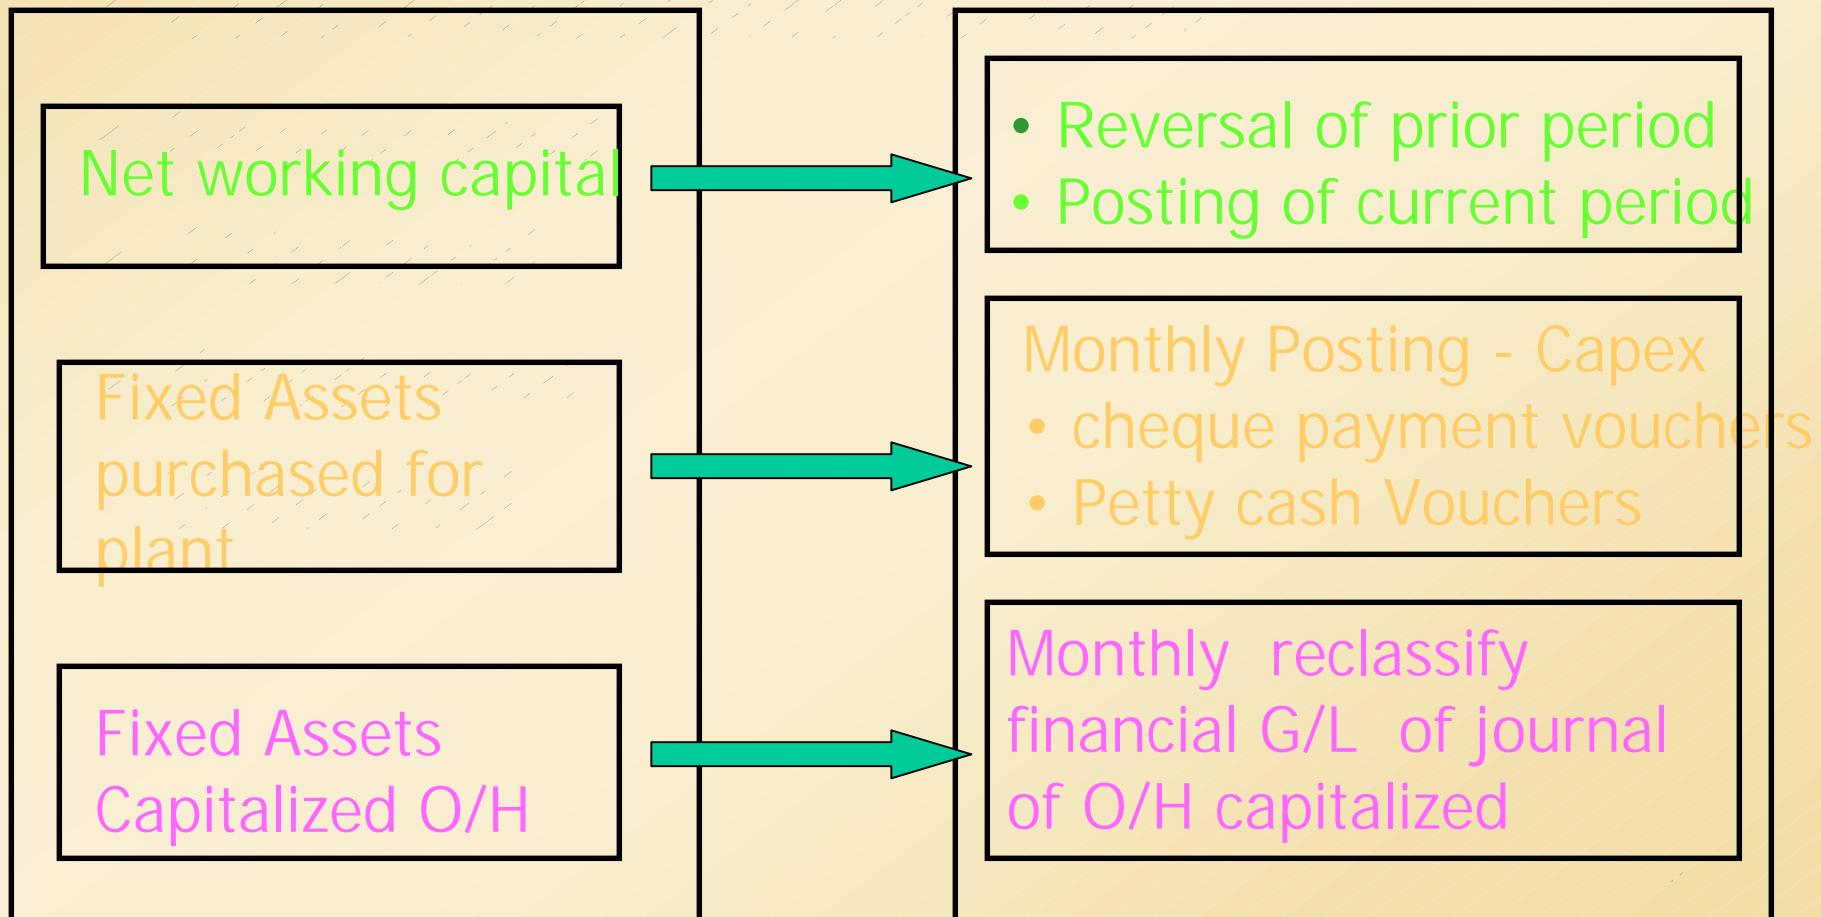

- Cost ledger Trial Balance reconcile to Financial G/L Trial Balance
- Cost ledger T/B accounts named, coded and all balances posted to computerized cost ledger
- Develop posting procedures for ongoing update of cost ledger
- Posting from source document:
 - cheque payment voucher - capital and operating expenses
 - Petty cash vouchers

Monthly Maintenance of Cost Ledger - continuous update

Cost Ledger T/B

Procedure for update

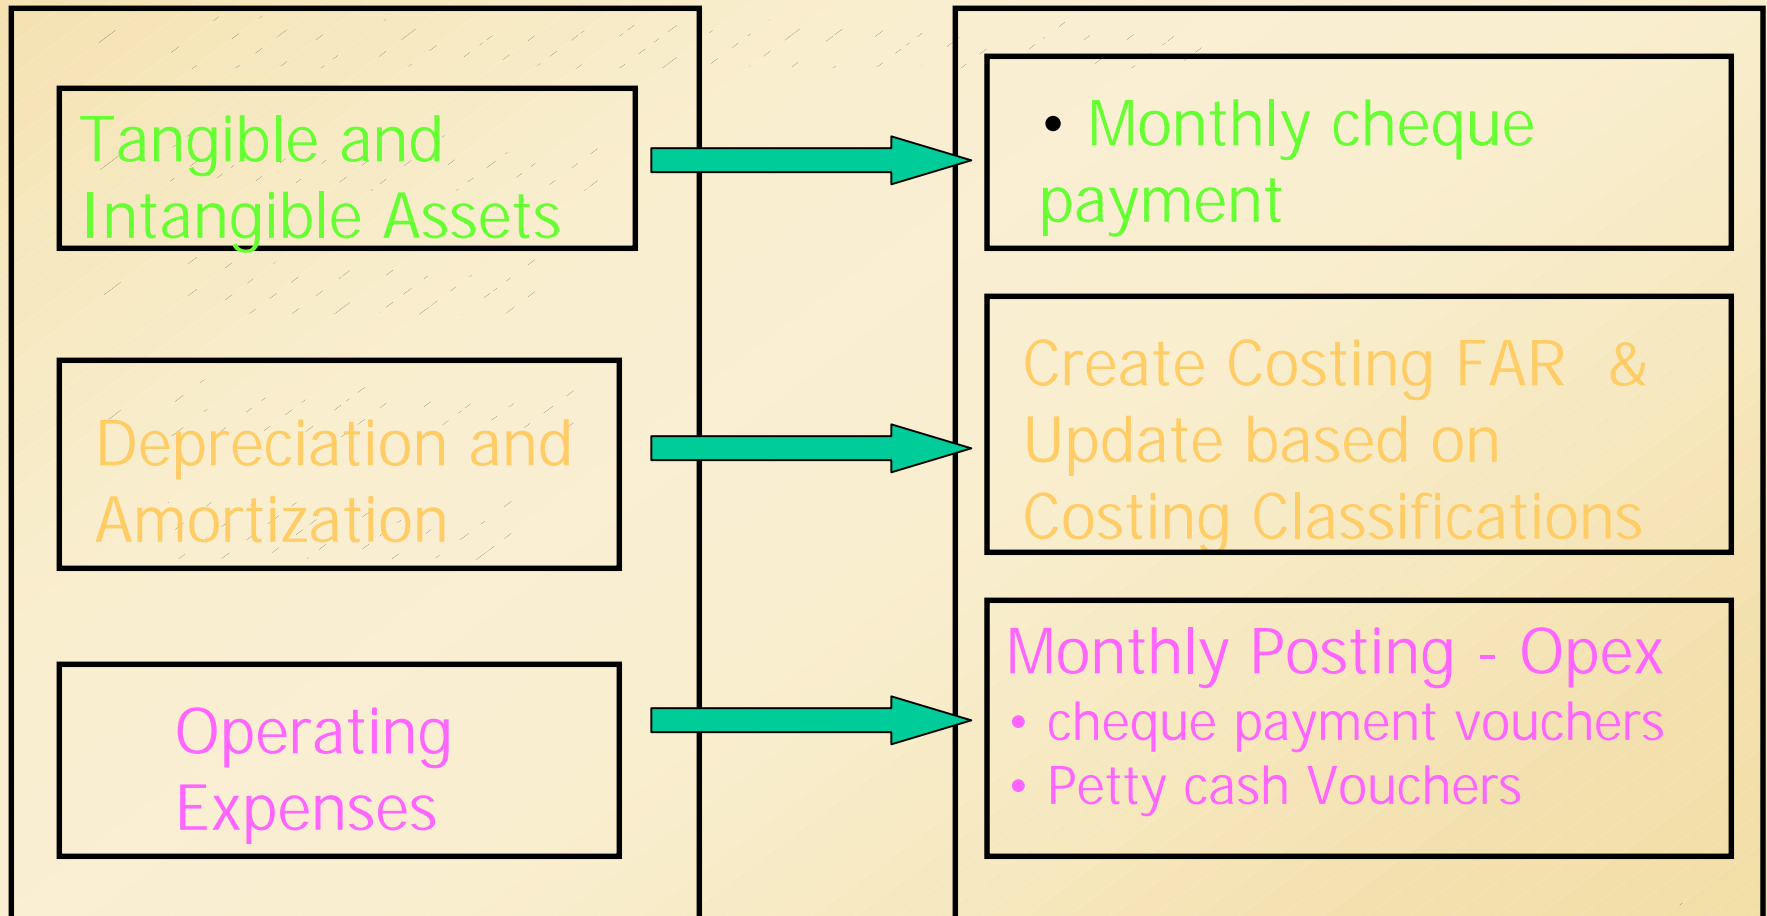

Monthly Maintenance of Cost Ledger - continuous update

Cost Ledger T/B

Procedure for update

Monthly Maintenance of Cost Ledger - continuous update

- Long Term Liability
- Shareholder Equity
- Retained Earnings
- Revenues

Not required for cost ledger

◆ **Monthly Maintenance of Cost Ledger - continuous update** →

Monthly reconciliation to Financial G/L

For the posted accounts ensure balances in cost ledger agrees with financial ledger for:

- Fixed Assets
- Tangible & Intangible Assets
- Depreciation & Amortization
- Operating expenses

Monthly Maintenance of Cost Ledger - continuous update

Construction of cost Ledger to agree in total with financial ledger Plug in omitted balances for categories not represented in cost ledger

Cost Benefits of Continuous Updates - cost ledger

- **Balance kept in periodic agreement with financial G/L, attesting to its accuracy**
- **Up to date costing data input, for cost model allows calculation of service cost at any point in time**
- **Up to date service cost supports flexible pricing strategies**
 - **This is advantageous in competitive markets where cost based pricing is mandatory**
- **Favorable impression on regulators, competitors, and stockholders knowing verifiable and up to date costs are available on hand.**

Establishing Cost Ledger

Costs

- Cost of hardware and software for maintaining up to date cost ledger
- More posting required - additional staff cost
- Requires realignment of source documents to cater for cost ledger disaggregated format
- Introduction of new procedures to accommodate posting of source data to cost ledger, on a continuous basis

Example - Realignment of Source data documents

Financial Acct Code	Cost Account Code	Description	Amount	Cost Allocation
FA 1160		Payment to Nortel re switch purchase	\$1,000	
	CA1160			\$500
	CA 1162			\$250
	CA1165			\$250
Totals
