

Communication has always been a human need.

We believe it is also a human right.

The International Telecommunication Union has played for nearly a century a vital role in the management of the radio-frequency spectrum and satellite orbits — finite natural resources which are increasingly in demand from an ever-growing number of services. Whether on earth, at sea, in the air or in space, wireless services require spectrum to operate. Through an international treaty, ITU coordinates efforts on a worldwide basis to avoid and eliminate harmful interference between radio stations of different countries for everyone to communicate. www.itu.int
