Abstract – *This paper discusses the possibility of applying the key principles and tools of current artificial intelligence (AI) to design future human systems in ways that could make them more efficient, fair, responsive, and inclusive.*

Keywords – Artificial intelligence, big data, human development, open algorithms, fourth industrial revolution

From Big Data to IA: what can we learn?

...it's neither new nor black magic...

1. It is **at least 60+ years old**.
2. It still generalizes poorly. It has no sense of context. **It is still pretty stupid.**
3. We are **far from general AI**.
4. **Humans are still in control** (for better or worse).

...but...

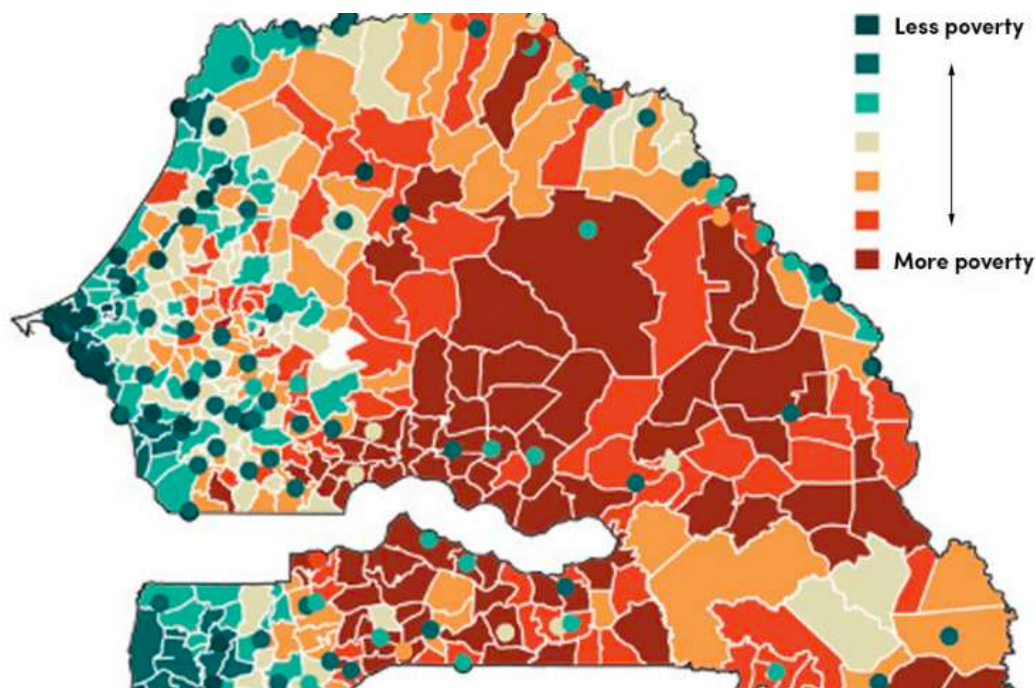

1. The (good) magic / core of the current AI is **the credit assignment function to encourage and reinforce neurons / functions that help the most achieve the goal (and reverse if not).**
2. The key difference and is data. **Big Data.**

Scientific Prize and Ethics Mention: Construction of socio-demographic indicators with digital breadcrumbs

F. Bruckschen ⁽¹⁾, T. Schmid ⁽²⁾, T. Zbiranski ⁽¹⁾

We show that socio-demographic indicators such as population, age, literacy, poverty, religion, ethnicity, electricity supply and others can be estimated in unprecedented detail and virtually ad-hoc using antenna-to antenna traffic data only. We offer a uniform approach that can be easily extended to other variables. Results are tested for spatio-temporal robustness and visualized as heat maps.

an illustrated introduction to Predicting socioeconomic levels through cell-phone data

Question:

so, how is it possible to predict an area's socioeconomic - or poverty - level from the cell-phone data it emits?

step ②

then notice how cell phone users leave digital traces, day & night ..

step ①

first, find or collect actual survey data ..

hello, we are conducting an official survey: are you poor or rich?

"these digital traces, recorded by every telecom operator, are 'Call Detail Records' or CDRs, metadata that look like that"

CALLER ID	CALLER LOCATION	RECIPIENT ID	RECIPIENT LOCATION	CALL TIME	CALL DURATION
X36872 9748Y	2°24'22," 35°49'58"	A8C492 TC73646	3°38'49," 31°12'22"	2014.04.01 ET 17:22	01.12.27

TELECOM OPERATOR DATA CENTER

"and these CDRs will show differences in calling patterns between different areas ..."

The Demographic Transition: Three Centuries of Fundamental Change

Ronald Lee

Before the start of the demographic transition, life was short, births were many, growth was slow and the population was young.

Saving Big Data from Big Mouths

Those who would condemn big data ought to try making something

By Cesar A. Hidalgo | April 29, 2014

Ronald D. Lee: "Malthus and Boserup: A dynamic synthesis (1984)"

A positive vision: Towards “Human AI” ecologies

MIT Prof Alex ‘Sandy’ Pentland:

*“The big question that I’m asking myself these days is **how can we make a human artificial intelligence?** (...) I don’t want to think small—people talk about robots and stuff—I want this to be global. (...) What would happen if you had **a network of people where you could reinforce the ones that were helping and maybe discourage the ones that weren’t? That begins to sound like a society or a company**”.*

The Human Strategy. www.thehumanstrategy.mit.edu

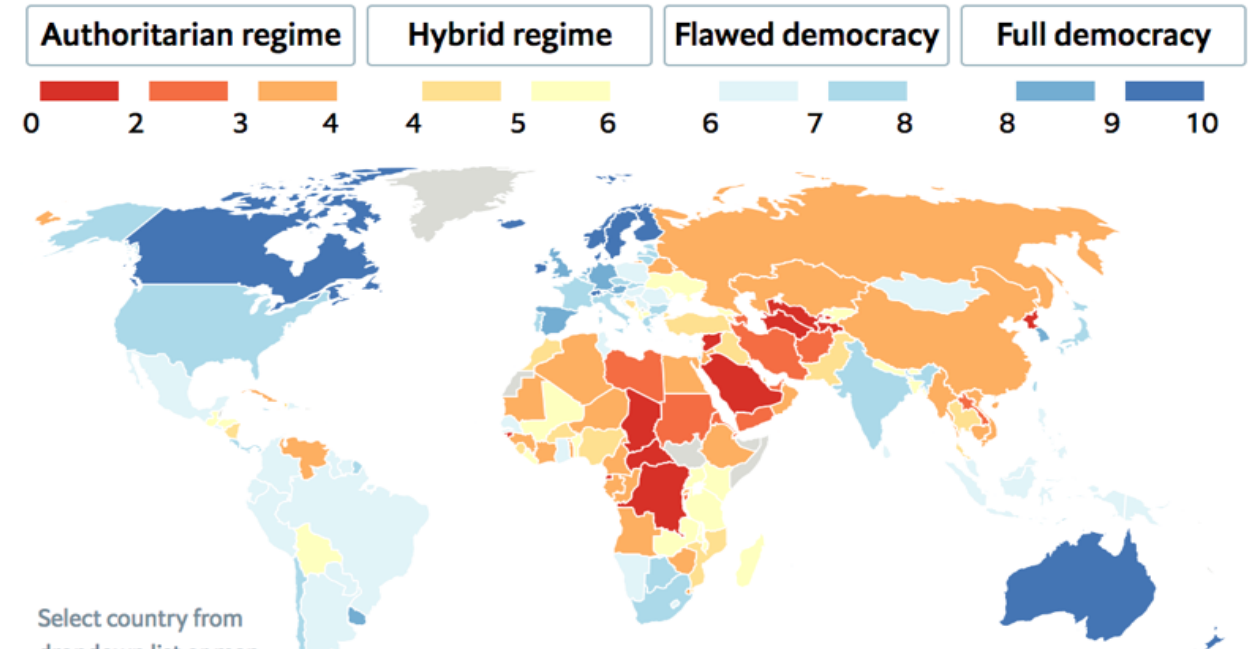

Main challenges to a Human AI

1. Powerful **agents** have an **incentive for this not to work** (e.g. economic and political elites benefit from status quo).
2. Most **societies / countries** **currently lack appropriate data connections, capacities, and culture** for this.
3. There is **widespread digital and analog distrust, disdain**, echo chambers, alternative facts narratives, hampering cooperation, consensus, compromise.

→ **Very hard for facts to “matter”**

The Economist Intelligence Unit's Democracy Index

167 countries scored on a scale of 0 to 10 based on 60 indicators

Data → Decisions → Development?

“Despite the many publications I think there are still many holes in our knowledge. There is a further need for empirical research on the lines of ‘political ethnography of indicators’.

Particularly is there a gap in theory and empirical studies on the line of causality from ‘data’ to ‘decisions’”

Morten Jerven, 2015

“Open Algorithms” (OPAL): a revolutionary vision to make facts and measurements matter, and data, algorithms and AI ‘work’ for the majority and the SDGs

Tariq Khokhar @tkb · 2h

Shoutout to the OPAL project - "bring the algorithm to the data" - more at: opalproject.org #UNDataForum

The Open Algorithm project:
Developing indicators, capacity and trust

To address the complex challenge of data access, Orange, MIT Media Lab, Data-Pop Alliance, Imperial College London and the World Economic Forum — supported by Agence Française de Développement and the World Bank — are developing a platform to unleash the power of “big data” held by private companies for public good in a privacy preserving, commercially sensible, stable, scalable and sustainable manner.

Open algorithms: A new paradigm for using private data for social good

By Thomas Roca, Emmanuel Letouzé | 18 July 2016

Elisabeth MEDOU BA DANG,
Porte-parole et directrice Afrique,
Moyen-Orient, Orange
Rabat, 2 juillet 2018

Aujourd’hui, le projet OPAL est développé avec l’Agence Française de Développement, Telefonika et d’autres partenaires. Des tests sont en cours au Sénégal et en Colombie. Nous espérons pouvoir mettre en œuvre plusieurs usages d’ici la fin de l’année. Cette plateforme constitue un levier important pour industrialiser l’usage du big data au service du développement.
