1. Introduction

High-Level Policy Sessions

At the WSIS Forum 2017, moderated High-Level Policy Sessions of the High-level Track (HLT) took place on the 13 and 14 of June. During these sessions, moderated Policy Sessions with high-ranking officials of the WSIS Stakeholder community, representing the Government, Private Sector, Civil Society, Academia and International Organizations were held.

2. WSIS Forum 2017: Chairman

H.E. Mr. Jean Philbert Nsengimana
Minister of Youth and ICT
Rwanda

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

3. Moderation: High level Track Facilitators (HLTFs)

All the High-level policy sessions were moderated by High-level Track Facilitators nominated by the different stakeholder types i.e Civil Society, Academia, Private Sector and Technical Community.

Session No.	Picture	Name	Designation	Organization	Country	Type of Stakeholder
ONE WSIS Action Lines and the 2030 Agenda		Dr. Jovan Kurbalija	Founding Director	Diplo Foundation	Switzerland	Civil Society
TWO Access to Information and Knowledge for All		Dr. Yury Grin	Deputy Director General	Intervale	Russia	Private sector
THREE WSIS Action Lines and the 2030 Agenda		Ms. Reine Essobmadje	CO-Founder	Digital Coalition	Cameroon	Civil Society
FOUR Access to Information and Knowledge for All		Mr. Justin Caso	Technology Policy and International Affairs Senior Advisor at the Institute of Electrical and Electronics Engineers (IEEE)	IEEE	USA	Technical Community

FOURTEEN Ethical Dimensions of Information and Knowledge Societies and Media		Ms. Mehwish Abid Ansari	Programme Assistant at Digital Programme	ARTICLE 19		Civil Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

4. Official Opening Segment - Opening Ceremony

Opening Segment

Opening Ceremony

The Opening Ceremony sets the priorities of the WSIS Forum 2017, bringing forth a wide range of topics within the Global Information and Knowledge Societies while emphasizing the role of Information and Communication Technologies (ICTs), WSIS Action Lines in particular, regarding the recently adopted Sustainable Development Goals (SDGs). In this way, the WSIS Forum 2017 builds upon the outcomes of the UN General Assembly Overall Review of the implementation of the WSIS outcomes (UNGA Resolution 70/125), which recognized the necessity of holding this Forum on an annual basis and called for a close alignment between WSIS and the SDG processes.

The WSIS Forum 2017 will therefore serve as a key forum for discussing the role of ICTs as a means of implementation of the SDGs and targets, with due regard to the global mechanism for follow-up and review of the implementation of the 2030 Agenda for Sustainable Development (UNGA Resolution A/70/1). The WSIS-SDG Matrix, developed by UN WSIS Action Line Facilitator and presented at the WSIS Forum 2015, will serve as the mechanism to map, analyze and coordinate the implementation of WSIS Action Lines, and more specifically, ICTs as enablers and accelerators of the SDGs.

The ceremony will begin with opening statements from the host, co-organizers, partners and representatives of stakeholders engaged in the WSIS Process. The Opening Ceremony will conclude with the handing out of the WSIS prizes.

The format, agenda, and the thematic focus of the Forum is a result of an open consultation process with the involvement of all WSIS Stakeholders. The Forum will build upon two tracks, the High-Level Track, and the Forum Track.

Please note that the captioning text of the Opening Ceremony is available online: <https://www.itu.int/net4/wsis/forum/2017/Agenda/Session/281>

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Written Statements

Universal Postal Union (UPU)

Mr. Bishar Abdirahman Hussein, Secretary General

The UN Secretary General, Mr. Antonio Guterres,
Heads UN agencies and other international organizations,
Distinguished Ministers and Country representatives,
Dear speakers and participants,
Ladies and gentlemen,

I am honoured to participate in this year's World Summit on the Information Society that is discussing the role of information and knowledge societies in the attainment of Sustainable Development Goals.

At the Universal Postal Union we have focused on using the extensive postal network to deliver to the citizens of the world value through a vital link that is trusted, reliable and affordable.

As the closest link to populations in developed and remote parts of the world, the post is diversifying its products by use of modern technology and through innovation to provide social and economic inclusion to improve the living standards of global citizens.

Our guiding tenets of innovation, inclusion and integration resonate very well with the delivery for SDGs. In fact, by our very nature of being able to offer services everywhere, sometimes beyond strict profit motives, we are in a better position than most industries to empower economically weak and marginal communities to realize their potential and enable them participate in national development.

We are working with governments and their designated operators to achieve digital transformation of the post to enable them deliver inclusive electronic commerce and financial inclusion that are key components to achieving Goals 5, 8, 9 and 17 of the SDGs.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Furthermore, we are proud to say that for each of the 17 goals, the post can contribute significantly in their attainment. Our inclusiveness agenda in the economic and financial sphere, for example, enables achievement of gender equality and empower all women and girls. This is achieved through sustained financial inclusion that enables small-scale trade and access to cheaper money.

This inclusiveness, apart from empowerment of communities also provides sustainable economic growth, productive employment opportunities, and decent work for all.

To facilitate attainment of the various goals that mainly address empowerment and inclusion, the UPU in collaboration with various governments and postal operators has come up with products like Easy Export, Ecom@Africa and .POST. The latter is a secure Top Level Domain facility that powers postal financial services. This is one of the largest growth area for postal business. The same provides secure transaction platform for Medium, Small, Micro Enterprises for export of products in an affordable manner.

Our current primary focus is on the development of electronic commerce, financial services and diversification of products through innovation. All these address empowerment of communities through making access to basic economic services, including trade, achievable and affordable.

Through the rollout of our newest product, Ecom@Africa, we are focusing on connecting the African continent, billed as the weakest link of our global network, to intra-country as well as continental and international trade. This is focused to benefit small-scale traders, women and youth. The product is also transforming the continent's post to diversify on its products so as to cope with the trends and needs of the society.

We have engaged African government to help develop this virtual trading platform that we believe will not only empower their communities but will also contribute immensely to national economic development.

Modern technology, which at first seemed like the death knell of the post, has paradoxically emerged to be its solutions to sustainability and profitability. It is through modern technology that the post is able to innovate and come up with new products and services that resonates with the needs of the population.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

These are the products that are key drivers to the attainment of various goals for sustainable development.

Thanks you very much for your attention.

5. Multistakeholder Partnership for WSIS Implementation

Written Statements

Japan

H.E. Mr. Shigeki Suzuki, Vice Minister for Policy Coordination, Ministry of Internal Affairs and Communications

Excellencies, distinguished guests, ladies and gentleman, Good morning. I would like to express my sincere appreciation to the Secretary-General of ITU Mr. Houlin Zhao, and the members of the WSIS Secretariat and all stakeholders.

•To accomplish this year's WSIS forum theme, "Information and Knowledge Societies for SDGs", I'd like to comment on 3 Key Factors today from a view point of multi-stakeholders partnership.

■ 3 Key Success Factors

The first is to ensure access to ICT for all people everywhere.

- Building an enabling environment for access to ICT and the Internet is the essential foundation for inclusive growth.
- Bridging digital divides is the most crucial and urgent issue because still half of people on globe do not have access.
- Japan promotes the public-private initiative named "Quality Infrastructure Investment" and contributes bridging digital divides through developing ICT infrastructure in the world.
- From a long-term perspective, the key is how to reduce Life Cycle Cost of infrastructure considering operation and maintenance cost, not only focusing on cheap initial cost.
- This initiative includes not only developing long-term sustainable infrastructure with a high operation rate, but also capacity building and technological transfer for operation and maintenance.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- It is also important to make fair and transparent policy and regulatory frameworks that encourage competition and investment through open process of decision making or joining multi-stakeholders.
- These can achieve affordable access, and as a consequence, people around the world regardless of income, region, gender and disability can have an access means to ICT.

The second is to promote and protect the free flow of information.

- The free flow of information is essential for multi-stakeholder approach to make the best use of ICT and innovation such as AI and Big Data by every stakeholders.
- Effective utilization of information is a powerful enabler of further innovation and economic development.

The third is to promote and utilize Innovation.

- Promoting innovation will increase the number of entrepreneurs, provision of new services and goods, and create a new business and market.
- Then create employment and wealth will be created. This will contribute to sustainable economic growth.
- Innovation like IoT, big data and AI is a great opportunity for economic development.
- AI can improve productivity and quality of life by relieving workers of monotonous and tedious labor.

To address these 3 points, we need to strengthen collaboration among all stakeholders, at national, regional and international levels.

- Last year, Japan hosted the G7 ICT Ministers' Meeting after an interval of about 20 years.
- In response to that momentum, this April, "G20 Digital Economy Ministerial Conference" related to Information and communications was held for the first time at the G20.
- At the conference, the new common goal was set, as "We will encourage the domestic deployment of connectivity to all people by 2025".
- We, the government of Japan, will continue to put forth our best possible efforts to achieve this goal and SDGs, together with all stakeholders.

Thank you for your attention.

■ Question from the moderator

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

In order to promote ICT innovation, what kind of activities do you do in partnership with multi-stakeholders?

■ **Answer**

- In Japan, when we make new decision and activities such as IoT and AI, we always establish an dialogue platform including multi-stakeholders such as private sector, academia, citizen and government.
- For example, now in Japan, in collaboration with related stakeholders, we are working on the standardization of IoT and 5G, development of Big Data analysis method and creating AI R&D Guideline.
- This AI guideline is the unbinding soft law, so that related stakeholders like private sector, citizen and academia can develop and utilize AI without any concern.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Switzerland

Mr. Thomas Schneider, Ambassador, Head of International Relations Service, Federal Office of Communications (OFCOM), Federal Department of Environment, Transport, Energy and Communications (DETEC)

Mr. Secretary-General,
Ministers,
Excellencies,
Distinguished Delegates,

Ladies and Gentlemen,

What is the role of multistakeholder partnership for WSIS implementation on national level?

Why talk about the national level in a global meeting? Because very often, things only work on a big scale, if they are solid on the small scale!

So, in order to **harness ICTs' full potential for the sustainable development of our national economies and societies**, we first need to make sure that **all stakeholders**, across all sectors, are **aware** of the vast **opportunities** that ICTs offer – but also of their challenges.

Then, **national governments need to know what citizens and businesses need**, what the local priority issues are for boosting development. And they need to **listen to everybody** including minorities and vulnerable groups and find a **balance between all different interest and needs**, so that – also on national level – no one is left behind. **Only then**, governments can provide for an enabling environment for a sustainable development and for peace at the national level.

This requires not just **networking between all stakeholders, but also openness of mind and respect of the values and needs of all stakeholder groups** in order to enhance mutual comprehension and cross-sectoral, interdisciplinary cooperation between them.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

So, enhancing cooperation between all stakeholders is not a new idea, but it is still not sufficiently done and often not with the right attitude.

We need a **new culture, a new spirit of cooperation and sharing among all stakeholders** – starting from the national and then moving up to the international level.

On national level, there are a **number of obstacles** to overcome:

- **Between different ministries and government agencies**, sometimes they are not aware of each other's activities or even fall into competition for resources, attention and recognition;
- There is often **mistrust and prejudices between stakeholders** on national level;
- And there are **too many voices of people active on the ground** that are not heard.

We need to understand and **show by example on the national level** that it is a **win-win for all ministries and government agencies to cooperate** and support each other in their work.

Governments need to earn the trust of all stakeholders and their willingness to cooperate through being accountable to them, but we also need to build capacities of businesses and citizens that they do understand that it is also in their interest that they act responsibly and accountably to society as well.

In 2016, **Switzerland adopted its strategy called „Digital Switzerland“**. This strategy will be continuously developed in a **dialogue with representatives from the economy, civil society, the technical and academic community – and media as well**. To that end, a new national dialogue will be launched to enable all relevant stakeholders to contribute to the further development of Digital Switzerland. **To succeed in the digital arena it is crucial for all stakeholders to work closely together.**

What is important on international level?

As indicated before, a **constructive, respectful and responsible cooperation among all stakeholders** is in our view crucial if we want to successfully benefit of the digital opportunities so that no one is left behind.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Therefore, **Switzerland is very committed to capacity-building efforts to allow all stakeholders to take part in the discussions and the decision-making** on national, regional and global levels.

Multistakeholder cooperation, however, does **NOT mean that we are all equal** in the sense that we have the same **roles and responsibilities**. We are, however, equal that we have **to share the overall responsibility for developing our digital societies**. In order to **find out what our respective roles are** and in order to also **mutually agree on** and **accept our respective roles**, we need to **sit together** and **openly discuss digital policies** including all opportunities and challenges, and taking into account all special needs - and **then identify each other's roles and responsibilities**, to foster awareness of the needs of various stakeholders, and to identify new partnerships and solutions.

To **contribute to the global capacity-building** in particular but not only for stakeholders from developing countries, the Swiss government in 2014 launched the **Geneva Internet Platform** – operated by DiploFoundation. This initiative aims to serve as

- an online platform,
- as an observatory,
- as a capacity-building center, and
- as a permanent and neutral venue for discussion.

We hope that **GIP can continue making a meaningful contribution to capacity-building** in the field of digital policy and invite all interested parties from all stakeholder groups to actively take part and make good use of it.

And of course, Switzerland supports a number of useful fora for multistakeholder dialogue and exchange of experience, like the annual WSIS Forum here in Geneva. From its early days, Switzerland has been supporting the WSIS Forum as a partner for specific activities – as we are doing again this year.

Besides the WSIS forum, Switzerland also attaches great importance other for a like the **European Dialogue on Internet Governance**, which took place last week in Tallinn, and the **global UN Internet Governance Forum**.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Over the **past decade**, these **multistakeholder fora have been pivotal** in bringing together engaged experts and decision-makers from all over the world and all stakeholder groups. In addition, they offer a unique venue to identify and discuss decisive and emerging policy issues related to the digitization of our societies and economies.

As you might be aware of, **Switzerland will be the host of the 12th annual IGF**, which will be held from 18 to 21 December 2017 at the Palais des Nations here in Geneva. The overarching theme for this year's annual meeting is "Shape your Digital Future!"

On behalf of the Swiss Government, **I would like invite you all and your colleagues to actively engage in the preparations and participate at the IGF**, fully benefiting from exchanges with key stakeholders from all over the world to shaping the digital future.

En guise de conclusion, nous aimerions saisir cette opportunité pour **remercier l'UIT, l'UNESCO, le PNUD et la CNUCED** ainsi que les **facilitateurs** des lignes d'action et les **co-facilitateurs** qui ont contribué à la mise en œuvre des objectifs du Sommet Mondial sur la Société de l'Information.

Nous sommes conscients que **davantage de contributions de nous tous** sont nécessaires afin de faciliter de manière concrète l'émergence d'une société de l'information inclusive et de tirer avantage des immenses possibilités offertes par les technologies de l'information et de la communication.

Finalement, au nom des autorités fédérales suisses ainsi qu'au nom du canton et de la ville de Genève, j'ai le plaisir de vous inviter à une réception qui se tiendra ce soir dans les locaux du CICG.

Je vous remercie de votre attention.

6. High-level Policy Sessions

SESSION ONE: WSIS Action Lines and the 2030 Agenda

High-Level Track Facilitator (HLTF): Dr. Jovan Kurbalija, Founding Director, Diplo Foundation.

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Ms. Doreen Bogdan-Martin, Strategic Planning and Membership Department
3. **Burkina Faso** – H.E. Ms. Ouattara née Sanon Hadja Fatimata, Minister, Ministère du Développement de l'Economie Numérique et des Postes
4. **Argentina** – H.E. Ms. Clarisa Estol, Secretary of Investment Promotion, Ministry of Communications
5. **Bangladesh** - Mr. Anir Chowdhury, a2i's Policy Advisor
6. **Group of Fifteen** – H.E. Mr. Ravinatha Aryasinha, Permanent Representative of Sri Lanka to the UN Geneva and Chairman of the Personal Representatives of the Group of Fifteen (Sri Lanka (Democratic Socialist Republic of))
7. **International Network of Women Engineers & Scientists** – Dr. Yvette Ramos, International Network of Women Engineers & Scientists (Switzerland)
8. **International Federation for Information Processing (IFIP)** — Mike Hinchey, President (Represented by Dr. Yuko Murayama, Vice President)
9. **Société Civile Africaine sur la Société de l'Information (ACSIS)** – Dr. Cisse Kane, President (Senegal (Republic of))

Introduction

- Strengthening the interconnections and synergies between the WSIS action lines and the sustainable development goals (SDGs) is an essential element in advancing the ICTs for development agenda.
- Enhanced coordination is also needed between the different organisations working on various ICT-related issues, as well as between the international discussions taking place in Geneva, and the regional and local realities around the world.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- ICTs are powerful tools for inclusion and poverty eradication, and it is imperative to empower everyone to make use of these tools.

Vision

- ICTs, as the 'invisible SDG', are a key element that impact all SDGs. They should be leveraged in the implementation of SDGs.

Priorities

- In order to fully explore the potential of ICTs in the realisation of Agenda 2030, the digital divide must be overcome.

Modalities

- Stakeholders working together to bridge the digital divide and achieve sustainable development through the use of ICTs.
- Building infrastructures in remote, unconnected areas is a first step towards boosting inclusive socio-economic development.
- The deployment of infrastructures should be complemented with actions such as providing local content (in the form of e-government services, for example) and strengthening digital literacy among end-users.

Emerging trends

- Public-private partnerships in promoting development and innovation through the use of ICTs.
- Incentivising innovative thinking across all sector of the society.

Opportunities

- Using digital technologies to improve people's quality of life and support their personal development and autonomy.
- Exploiting the role of ICTs as a powerful tool for inclusion and for eradication of poverty.
- Leveraging new technologies such as the Internet of Things to transform societies.

Key challenges

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Many countries are still dealing with high poverty rates.
- Deploying infrastructures in remote areas often proves to be challenging, especially when there are not enough incentives for the private sector to invest.
- Governmental actions aimed at supporting digital development need a holistic approach, and silos must be avoided.
- Mobilizing financial resources to bridge the digital divide across the world is still a challenge.

Case examples

- Linkages between WSIS action lines and the SDGs:
 - ITU developed a matrix combining SDGs and WSIS action lines, a mapping exercise which improved the understanding of the synergies between the two agenda.
 - ITU also incorporated the SDG agenda in its strategic and operational plans.
- Overcoming the digital divide
 - In Bangladesh, the government is employing innovation and technology to solve citizen's problems and increase civic participation. For example, public services are increasingly being delivered through electronic means, and social media channels are used for communication between public officers and citizens.
 - Burkina Faso is carrying out infrastructure projects to connect villages and cities, and is part of a regional broadband connectivity project for West Africa. The country is also implementing e-government initiatives that provide online services to citizens.
 - Argentina runs a programme aimed to expand access to smartphones for underprivileged communities.
 - The Group of 15 (gathering 15 developing countries from Asia, Africa, and Latin America) is facilitating cooperation among its member states in the area of digital development.

Road ahead

Simple and concrete approaches to digital development challenges and actions plans that can have a positive impact for all.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Bangladesh

Mr. Anir Chowdhury, Political Advisor, Access to Information (a2i) Program

How is the Government of Bangladesh capitalizing on public-private-people partnerships for enabling development leapfrogging?

In Bangladesh, we recognize that a country cannot achieve fast track development without the combined efforts of all relevant stakeholders and development partners. It is with this conviction that the Government of Bangladesh has been on a transformative journey from being a conservative body to becoming a facilitator for impact driven partnerships catalyzed by the a2i Program at the Prime Minister's Office.

Citizens who previously had to make the time-consuming, painful and often unnecessary travel of around 20-40 kms to the nearest government offices for important services, can now easily visit one of the 4,500 plus Union Digital Centres within walking distance located in local government premises, and run by young entrepreneurs, both male and female. Such public-private partnerships have given us a new generation of local service providers who are not only better aligned with local socio-cultural context but more importantly driven to succeed because it is their own business that they are running. These micro-entrepreneurs deliver over 100 types of public and private services ranging from birth registration, land records and financial services to over 5 million underserved every month. Time and cost of service delivery have come down by 50 to 60% nationally.

The Government of Bangladesh has gone further to come up with ingenious and manageable ways of allowing and encouraging citizen participation in policy level decision making. All 64 district administrators are using social media to do thousands of citizens grievance redressals every month. This phenomenon is completely revolutionizing our traditional grievance redressal system. This platform is giving rise to a new cadre of 'citizen journalists' creating unprecedented interaction with citizens who are contributing to policy formulation.

It is this ICT enabled empowerment powered by public-private-people partnerships that we believe will take both South and North nations into a completely new level of service innovation and equip us for development leapfrogging.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

We know that your government is implementing the Digital Bangladesh vision and that you have made some significant strides in the last 10 years in the ICT4D indicators. How can the other developing countries and South-South nations learn from your experience?

The Bangladesh government is embracing approaches and tools to become more citizen-centric, responsive and participatory.

First of all, we are cautious about developing citizen-centric approaches rather than technology-centric approaches when designing or bringing innovation in public services. Through ICT-based service design trainings, we are building capacity among our civil servants to come up with original ideas on how to bring innovation in public service delivery mechanism.

Next, to make the Bangladesh Civil Service fully understand the perspectives of the citizens, especially the underserved, and modify its own structure and processes to incorporate this new understanding, the Bangladesh government is employing tools such as ‘design thinking’ and ‘behavioral insights’.

Finally, the Bangladesh government has taken a definite move towards result based experimentation and citizen centric innovation while leveraging on the strengths of private sector, academia and think tanks through public-private partnerships.

We believe that by sharing these insights and knowledge, understanding not just what innovation happened, but how it happened and why it happened – and in full glory of the context it happened in – will allow us to “build on the shoulders of giants” in those countries, avoid the mistakes they made and thus accelerate our own progress. This will help us achieve SDG 17 of strengthening global partnerships for sustainable development.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Burkina Faso

**S.E. Mme Hadja Fatimata Ouattara/Sanon, Minister,
Ministère du Développement de l'Economie numérique et
des Postes**

**Monsieur le Secrétaire Général de l'UIT,
Excellences, Mesdames et Messieurs les Ministres,
Excellences Mesdames et Messieurs les Ambassadeurs, et les
Représentants des Organisations Internationales,
Distingués délégués,
Mesdames et Messieurs.**

C'est avec un réel plaisir que je prends la parole à cet important rendez-vous annuel qu'est le Forum du Sommet Mondial de la Société de l'Information (SMSI). Je voudrais particulièrement féliciter **M. Houlin ZHAO, Secrétaire Général de l'UIT**, les premiers responsables de toutes les agences des nations Unies impliquées, notamment, l'UNESCO, la CNUCED, et le PNUD pour la parfaite organisation de cette manifestation.

Excellence, Mesdames et Messieurs,

Le thème général du présent Forum : «Les sociétés de l'information et du savoir au service du développement durable» nous interpelle tous à réfléchir sur les voies et moyens pour que chaque habitant de la terre puisse vivre la réalité de la Contribution des Télécommunications et des TIC à l'amélioration de la qualité de vie.

Pour sa part, le Burkina Faso accorde une très grande priorité au développement de l'économie numérique aux fins de soutenir sa croissance et de créer les conditions d'une plus grande employabilité de ses citoyens et particulièrement de sa jeunesse, et les conditions de l'autonomisation des jeunes filles et des femmes.

Excellence, Mesdames et Messieurs,

Le Burkina Faso poursuit inlassablement ses efforts dans le sillage des lignes d'action tracés dans le cadre du SMSI.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Aussi, et en vue de garantir l'accès du plus grand nombre à des services de qualité, le Gouvernement conjugue ses efforts avec ceux des opérateurs privés établis afin d'assurer à notre pays une infrastructure adéquate qui va contribuer substantiellement à l'amélioration de la qualité de service et d'une manière générale à intégrer notre pays dans la société mondiale de l'information.

Les nouvelles orientations stratégiques nationales, contenues dans le nouveau référentiel de développement qu'est le Plan National de Développement Economique et Social (PNDES) réaffirment l'importance des télécommunications/TIC comme facteurs de développement et nourrissent de grandes ambitions pour le secteur.

Excellence, Mesdames et Messieurs,

La mise en œuvre des lignes d'actions issues du SMSI constitue un facteur essentiel pour la réalisation des ambitions de développement de nos Etats et des Objectifs de développement durable(ODD). La situation pour le Burkina Faso se présente comme suit ;

- Sur le plan de la mise en œuvre de l'environnement propice,

Le Burkina Faso s'est doté d'un cadre juridique intégral et holistique pour le développement des réseaux et des services de Télécommunications et des TIC. A l'actif de ces réformes, notre pays connaît en ce moment un environnement compétitif et ouvert en matière des Télécommunications et des TIC, conforme aux règles communautaires et aux normes internationales.

- Sur le plan du développement de l'Infrastructure,

En vue de contribuer à l'accès universel aux services de qualité, le Gouvernement a mis en œuvre des projets structurants dans le domaine des infrastructures et des applications. Il s'agit en premier lieu, de la réalisation de réseaux en fibre optique reliant les provinces et principales villes et les localités rurales, pour résorber l'enclavement géographique et la fracture numérique vers le «large bande pour tous». Ce projet, en cours de réalisation, va certainement permettre d'utiliser pleinement les TIC pour le développement socio-économique inclusif et durable du Burkina Faso.

Aussi, le Gouvernement avec l'appui de partenaires financiers, a initié la réalisation d'un point d'atterrissage virtuel et celle d'un point d'échange Internet, afin de contribuer à la disponibilité d'Internet à moindre coût au profit des opérateurs de télécommunications.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Excellence, Mesdames et Messieurs,

- Sur le plan du développement des applications et des usages des TIC,

L'administration de mon pays poursuit ses efforts de modernisation pour faciliter l'accès des citoyens et des entreprises à des services en ligne ainsi que pour l'amélioration de la transparence de son action. Au nombre des acquis, on peut retenir notamment la télé-déclaration des impôts, le suivi des dossiers de paiement des fournisseurs, le suivi des dossiers de carrière et de solde des agents publics de l'Etat, les inscriptions aux concours de la fonction publique. Bien d'autres e-services sont en cours d'élaboration dans tous les secteurs de la vie (santé, éducation, monde rural, administration publique..).

La mise en place par le Burkina Faso, d'une infrastructure de Cloud Gouvernemental (G-Cloud) sera effective dans les mois à venir pour renforcer l'efficacité de l'offre de service de l'Etat et offrir une plateforme robuste, ouverte aux acteurs privés du secteur pour renforcer la sécurisation de leurs données ainsi que leurs capacités d'innovation dans l'offre de services répondant au besoin du marché.

La mise à disposition des données ouvertes est également en cours avec l'initiative OPEN DATA. Cette initiative permet de rassembler sur une même plateforme les données statistiques, non sensibles, qui sont produites par le gouvernement, le secteur privé et la société civile afin de permettre leur réutilisation dans le cadre de projets innovants.

Notons également que notre pays a mis en place une plateforme E-Conseil des Ministres avec l'appui de l'UIT et tient régulièrement, depuis une dizaine d'années, sans discontinuer, les éditions annuelles de la Semaine Nationale de l'Internet.

Excellence, Mesdames et Messieurs,

Au Burkina Faso nous croyons très fermement au potentiel des TICs pour accélérer le développement socio-économique. L'utilisation des technologies émergentes comme l'internet des objets, l'intelligence artificielle et la recherche de modèles innovants de partenariat public privé sont autant de moyens que nous explorons pour la mise en œuvre des lignes d'action tracés dans le cadre du SMSI pour accélérer l'atteinte des ODD. Si dans les pays en développement les TIC peuvent être perçus comme des services

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

d'appoint, dans un pays en développement comme le mien les TIC constituent la force motrice de notre développement socio-économique. Nous y croyons et nous travaillons dans ce sens.

Je vous remercie

Group of Fifteen

H.E. Mr. Ravinatha Aryasinha, Permanent Representative of Sri Lanka to the UN Geneva and Chairman of the Personal Representatives of the Group of Fifteen

Mr. President,

I have the honour to deliver this statement on behalf of the Group of Fifteen (G-15), a Group of Developing Countries representing Asia, Africa and Latin America that aims for mutually beneficial cooperation and collaboration for realizing sustainable development and economic progress. Our Group is deeply pleased to be part of the World Summit on the Information Society (WSIS), the world's largest annual gathering of the 'ICT for the development community.'

As a niche Group of the Global South, the G-15 has identified the 2030 Agenda for Sustainable Development as an important global process to be involved. The G-15 also wishes to acknowledge the concerted efforts made by the International Telecommunication Union to highlight the role that ICTs play in achieving the Sustainable Development Goals. In this regard we are particularly encouraged by the WSIS Action Lines in support of the implementation of the SDGs. Our Group believes that ICTs continue to play a critical role in promoting, advancing and measuring the SDGs and wish to enhance the capacities of our member countries in this regard. We believe that ICTs are an important engine for achievement of the Sustainable Development Goals. Goals 9 and 17 are among the most relevant. Goal 9 addresses the promotion of inclusive and sustainable industrialization and fostering innovation in general and information and communications technology, in particular Goal 17 refers to science, technology development and transfer, and capacity building as means of implementation which play crucial roles in achievement of the 2030 Development Agenda. Although the SDGs, and also the Tunis Agenda make several direct and indirect references to transfer of technology, their cross-cutting relevance is not properly reflected in the SDG indicator framework. A major challenge that is facing many developing countries is the lack of appropriate technology that is required for the achievement of the SDGs. In this

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

regard, resolution E/RES/2016/22, titled: “Assessment of the progress made in the implementation of and follow-up to the outcomes of the World Summit on the Information Society” calls upon all stakeholders to provide adequate resources, enhanced capacity-building and transfer of technology and knowledge to developing countries.

The G-15 views Information Communication Technology as a key area for focused cooperation among the members. In this context, we are glad to engage with the WSIS Forum and ITU in a constructive manner in order to further enhance capacities among our member countries.

The past year has seen significant developments in the interactions between the G-15 and the ITU. On two separate occasions there have been high level meetings with participation of representatives of G-15 and ITU officials on numerous avenues of cooperation that could be enhanced between our two organizations.

In this respect the G-15 is committed to enhancing capacities among its member countries through robust South-South cooperation initiatives and also seeks opportunities for collaboration with international organisations, including the ITU. There are serious concerns with regard to the digital divide between the developed and the developing countries while there are closer relationships between the two in all walks of life. While progress has been made in terms of closing the gaps and differences in some areas, a considerable technological divide still exists between and within countries. Such divides often act as impediments in harnessing the potential of science, technology and innovation for the ongoing processes, such as the implementation of the Sustainable Development Goals. To overcome this gap, technology development and transfer and capacity building have a crucial role to play. These provide means for empowerment of people and communities, and are an essential element towards creating an inclusive information society. It is also the observation of the G-15 that much could be achieved through sharing of resources and experiences among the developing countries with the support of international partners such as the ITU. In this regard the G-15 wishes to further engage with the ITU to seek opportunities and arrangements for training and capacity building for its member countries which would offer tangible benefits. This could be done in partnership with other States and regional and international organisations.

On behalf of the G-15, I would like to wish every success to the WSIS Forum.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

International Network of Women Engineers & Scientists Dr. Yvette Ramos

Distinguished dignitaries,
Ladies and gentlemen,

It is a great honour to address such an august gathering in the World City of Peace today. I wish to congratulate the International Telecommunication Union (ITU) for organizing for so many years now such a laudable Summit, the WSIS, to reflect on what has become practically inevitable in today's global economy, that is, the emergence of the ICTs as key booster for inclusive development.

1. Which stakeholders do you represent here today?

I represent here today on one hand:

- Women Engineers and Scientists of the world, thanks to the International Network of Women Engineers and Scientists (INWES), created in 2002 as an incorporated not-for-profit organization in Canada and;
- Swiss Engineering, the Swiss engineers society with over 13'000 members in Switzerland, partner of the ITU for the WSIS for 2 years now, and potential partner of the ITU in a longer term in two strategic areas:
 1. Industry 4.0 and digital transformation of our societies through innovation
 2. Role of women & men engineers and scientists in the XX1st century!

What is your contribution at the WSIS and further recommendations to the ITU?

Ladies and gentlemen, we are very honoured to try and empower the WSIS forum so to build a better future worldwide through our Engineering and Scientific societies, including men and women's participation in ICTs. There used to be times when the invisibility cloak would give you extreme power! Maybe our human fantasy will never contradict this (cf. Harry Potter) but:.....Women need now to be put under the spotlight and it is time to show that we not only smile or cry, we also manage and are experts in ICTs. Industry 4.0 PLUS we want to have the power!

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

We deal everyday with complexity, and finance is just a mean to develop inclusion at all levels. We do know how to build complex projects, with time pressure, people constantly increasing needs for innovation, efficiency and effectiveness, infrastructure developments and overall political wills to progress in every sector of activity.

On the 15th June this week, we will have a wonderful Workshop about women Engineers & Scientists in the digital economy and industry 4.0: this will put the light on the role of women engineers & scientists all along the past decades and will raise the profile of our role models. As a follow-up activity of the 2016 workshop on building a Code of Ethics in engineering, we, engineers in ICTs, and more generally engineers worldwide, do offer and implement solutions for the protection of the global environment, do implement sound and sustainable economic development and contribute positively to poverty reduction strategies and actions.

As women engineers and scientists are included in the process, on equal basis, we believe our major strength is to contribute to Goal 5 (Gender equality) of the Sustainable Development Goals, but not only!

We want to achieve and help achieve the Sustainable Development Agenda towards 2030 with direct and simple approaches, and act and accelerate change with positive impacts for all. Especially, we are happy to see initiatives in ITU and other instances implemented to promote equality and to support women in technical areas, in particular in ICTs.

However, there is still much to be done. INWES members through its regional networks and partners are all actively working very concretely to:

- represent the interests of all women in STEM
- reinforce the key role of women in STEM in building a sustainable and inclusive society
- leverage diversity and create innovative synergies
- promote a balanced life in modern ways for all

We, INWES organizational Member, Swiss Engineering, together with other INWES partners in Europe, including women engineers & scientists active in STEM (Science, technology, Engineering and Maths), propose to sign a partnership with the ITU and key other players in the sector, on specific projects and programmes aligned with Actions Lines and SDGs we are working on.

Thank you for your attention

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

International Federation for Information Processing Prof. Mike Hinchey, President

As President of the International Federation for Information Processing (IFIP), I am delighted to take a few moments at the WSIS Forum 2017 to reflect on the sustainable development goals and provide some examples on the way IFIP is able to contribute to achieving them.

IFIP is the global federation of national and international scientific, technical and professional ICT societies. Combined, these societies represent an enormous source of knowledge and experience in all aspects of ICT and STEM. This knowledge and experience has to be, is and will be used to contribute to the 2030 Agenda.

In summary, IFIP aims at achieving a worldwide professional and socially responsible development and application of ICT, by:

- enhancing international cooperation between national and international organizations, and among individuals, in all aspects of research, development and application of ICT
- increasing professionalism and ethical behaviour in the ICT workforce
- promoting digital equity
- educating the public and enhancing public understanding
- disseminating and exchanging information

The model that IFIP uses involves multi-stakeholder participation, in working groups, in technical committees, at forums and special interest groups and conferences across the globe. This it has done in all of its 60 plus years. Is this still a valid methodology to achieve its aims? We believe that our approach like that of WSIS itself is still valid and effective, however the challenge is to accelerate the actions in order to realize the 2030 Agenda.

IFIP has always been a partnership based organisation, we believe that this is a major factor to help increase the effectiveness of our largely voluntary efforts. This plays perfectly into SDG exhortation to revitalise and enhance global partnerships. IFIP has 117 working groups and technical committees which are global, we have the International Professional Practice Partnership (IP3) and our Global Industry Council comprised of senior leaders in industry committed to improving and promoting professional practice in ICT.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

IFIP is keen to contribute to the 2030 Agenda and invites all WSIS stakeholders to discuss possibilities for effective and efficient partnerships, in various ways for various goals and action lines.

Société Civile Africaine sur la Société de l'Information (AC SIS)

Dr. Cisse Kane, President

Monsieur le Président du Forum du SMSI 2017,
Monsieur le Secrétaire Général de l'Union
Internationale des Télécommunications,
Excellences, Mesdames, Messieurs les ministres,
Chers participants (tes)

Au nom d'AC SIS, nous vous exprimons nos félicitations ainsi qu'à M. Houlin Zhao Secrétaire Général de l'Union Internationale des Télécommunications, son équipe et l'ensemble de ses partenaires de l'UNESCO, du PNUD et de la CUNCED, pour l'organisation du WSIS FORUM 2017, qui a été le cadre de consultations vivantes avec des sessions de très haut niveau organisées en vue de répondre à la question des liens entre les TIC et les ODD. Nous nous félicitons également de la participation forte et de la contribution substantielle de l'Afrique au Forum 2017 du SMSI ainsi que de la forte mobilisation des membres d'AC SIS Suisse et de la Société Civile Africaine en général.

La relation entre les TIC et les Objectifs de Développement Durable des Nations Unies est une évidence en ce sens que les TIC sont l'outil capacitateur global pour tous les autres ODD des Nations Unies. Les TIC font partie des plus grands créateurs d'emplois dans le monde. Il faut en faire une opportunité dans le monde mais surtout en Afrique

Pour ce qui concerne l'Afrique les défis majeurs restent importants. En effet, les fractures sont toujours très béantes en Afrique avec un très bas taux de connectivité en Afrique. Nous avons tous démarré ensemble il y a 25 ans mais il y en des pays qui en sont à 90% et d'autres à 3% de connexion Internet (surtout en Afrique). L'explosion mobile en Afrique ne saurait masquer un accès très partiel à la société de l'information et des connaissances.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

En Afrique il y a encore beaucoup de barrières comme l'accès (coûts et infrastructures), la langue, l'analphabétisme numérique). Nous risquons de continuer encore longtemps à recueillir aussi beaucoup de méfaits des TIC.

Les dangers de l'Internet liés à la cybersécurité, à l'environnement (les déchets électroniques mais aussi ondes de toutes sortes, la gadgetisation, rendent l'Afrique encore plus vulnérable que les autres continents.

Il s'agira donc, pour répondre à la question du thème central du Forum SMSI de cette année, de mettre les TIC au cœur des processus (tous les ministères, toutes les activités), d'inscrire la dimension numérique comme un pré-requis dans toute action que l'on entreprend, dans toute politique à mettre en œuvre, dans tout plan de développement.

Cela implique de gros efforts de formation et de sensibilisation sur la place capitale des TIC dans le processus de transformation numérique de l'Afrique, et davantage de moyens pour l'appropriation des processus de gouvernance de l'Internet

Monsieur le Président du SMSI,
Monsieur le Secrétaire Général de l'Union Internationale des Télécommunications
Excellences, Mesdames, Messieurs les ministres,
Chers participants (tes)

Comme l'a dit un des participants au Panel organisé par ACSIS sur l'économie numérique en Afrique, Pertes, Gains et stratégies : "Même si on donne toute la connectivité en Afrique, on restera des consommateurs tant qu'on n'a pas résolu la question des langues et contenus locaux ». Il est donc nécessaire de veiller à une appropriation plus locale et plus localisée des outils et des opportunités liées aux TIC.

La digestion de ce processus ne saurait se faire sans de gros efforts dans la localisation des processus en Afrique qui passe par la mise à profit des savoirs et cultures locaux, la multiplication des points d'échanges et la généralisation des contenus locaux qui ouvrira de nouvelles opportunités pour les investisseurs et boostera l'innovation. Aujourd'hui seuls 3% des contenus Internet en Afrique se font dans les langues africaines. Si on n'y prend garde, l'Afrique va continuer à être ce qu'elle fondamentalement aujourd'hui, une consommatrice de l'Economie

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

numérique qui n'a aucune prise sur les processus, un marché à la merci des multinationales. De sorte qu'elle risque de ne bénéficier que des miettes de l'économie numérique.

C'est pourquoi nous pensons que la Communauté internationale devrait se pencher sur la question de la mobilisation de ressources encore plus conséquentes pour que l'Afrique bénéficie davantage des retombées de l'Economie Numérique. ACSIS se réjouit de toutes les initiatives qui se développent en Afrique comme Smart Africa et lance un appel à tous les pays Africains pour soutenir l'organisation prochaine au Tchad du Sommet Panafricain sur l'Economie Numérique et la Croissance Durable.

Monsieur le Président,
Monsieur le Secrétaire Général de l'Union Internationale des Télécommunications
Excellences, Mesdames, Messieurs les ministres,
Chers participants (tes)

La Société Civile africaine se félicite de l'existence de ce cadre unique qu'est le Forum du SMSI qui permet la plus grande interaction entre tous les acteurs du secteur. Ce qui est essentiel dans notre présent et dans notre futur. Nous présentons nos félicitations à toute l'équipe organisatrice du Forum autour de M. Houlin Zhao, Secrétaire Général de l'UIT.

Nous estimons cependant que, compte tenu des enjeux, la communauté internationale doit se mobiliser davantage pour doter le Forum du SMSI de moyens conséquents pour assurer plus d'inclusion et une participation plus équitable de tous les pays du monde et de toutes les parties prenantes (Gouvernements, secteur privé, Société Civile, Collectivités locales, Communauté technique, Secteur académique, etc.)

Aujourd'hui le site du Forum du SMSI est entièrement en anglais. Le concours du WSIS Prize est entièrement en anglais. Cela veut dire que si l'on ne peut pas remplir le formulaire en anglais on ne pourra pas participer au concours du WSIS Prize, même si on a un très beau projet. Il est également évident que si on n'est pas anglophone on risque grandement de ne pas pouvoir voter puisque l'interface de vote est uniquement en anglais. Ce concours risque donc de continuer encore longtemps à favoriser les candidats maniant l'anglais comme c'est le cas cette année encore. Par ailleurs, durant le WSIS FORUM, seules les rencontres de haut niveau sont interprétées dans les langues des Nations Unies. ACSIS lance donc un appel solennel à la

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

communauté Internationale pour doter le forum du SMSI de moyens suffisants pour un soutien plus significatif au Forum du SMSI en renforçant son caractère inclusif et en accroissant sa résonnance. Cela passe par plus de multilinguisme dans le processus du Forum. Un soutien significatif du Secrétariat permettrait de:

1. Traduire tout le site Internet du WSIS FORUM au moins dans toutes les langues officielles des Nations Unies
2. Veiller à ce que toutes les sessions du WSIS FORUM bénéficient d'interprétation dans toutes les langues officielles des Nations Unies
3. Traduire l'agenda du Forum du SMSI dans toutes les langues des Nations Unies
4. Offrir un nombre de bourses conséquentes (au moins 20 par continent) chaque année afin de permettre aux membres de la Société Civile les plus méritants de faire le voyage de Genève et de participer au Forum du SMSI
5. Prévoir l'opportunité de compléter les délégations gouvernementales par quelques membres méritants de la Société Civile

ACSIS demeure convaincu que ces mesures sont salutaires pour assurer plus d'inclusion, une participation plus juste et plus équitable à notre Forum mondial. ACSIS est convaincu que la Communauté internationale a les moyens de soutenir ce processus de passage au multilinguisme et à une participation plus inclusive qui va ouvrir d'autres horizons à la communauté internationale. Nous pensons que le secteur privé des TIC est très prospère et nous lui lançons un appel pour soutenir cette proposition pour d'avantage d'inclusion. Nous lançons cet appel aux gouvernements, à la Communauté technique, aux collectivités locales à la société Civile de tous les pays membres des Nations Unies pour accompagner ce processus qui vise à davantage d'inclusion.

Monsieur le Président,
Monsieur le Secrétaire Général de l'Union Internationale des Télécommunications
Excellences, Mesdames, Messieurs les ministres,
Chers participants (tes)

Je vous remercie de votre attention.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION TWO: Access to Information and Knowledge for All

High-Level Track Facilitator (HLTF): Dr Yury Grin, Deputy Director General, Intervale

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Mr. Kemal Huseinovic, Chief, Department of Infrastructure, Enabling Environment and E-Applications (IEE)
3. **Slovenia** – H.E. Mr Boris Koprivnikar, Deputy Prime Minister, Minister for Public Administration
4. **Thailand** – H.E. Mr. Pansak Siriruchatapong, Vice Minister, Ministry of Digital Economy and Society
5. **United States** – H.E. Ms. Julie Napier Zoller, Acting U.S. Coordinator for International Communications and Information Policy, International Communications and Information Policy (CIP), United States Department of State
6. **Zimbabwe** – H. E. Dr. Win Busayi Juyana Mlambo, Deputy Minister, Ministry of Information Communication Technology, Postal and Courier Services
7. **Colombia** – Dr. Martha Liliana Suárez Peñaloza, Director General, Agencia Nacional del Espectro
8. **Facebook** – Mr. Robert Pepper, Head, Global Connectivity Policy & Planning (United States)
9. **Association for Progressive Communications** – Ms. Deborah Brown, Global Advocacy Lead (South Africa (Republic of))

Introduction

Information and communication technology is the most inclusive technologies that we all use. It is widely accessible and now quite cheap to use it. And there is no differences between gender and should be less and less problematic for some unfortunate groups of people.

Vision

Learning now is not something that we do separately. Learning is something that we are doing very much on fly. So when we work we learn, when we go home, we learn. And today technologies for learning are much more effective than before.

Increasing power and efficiency of ICT for economical and humanitarian development worldwide

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Fresh Priorities

Use of Artificial Intelligence and cognitive sciences - this is something that can really improve how fast we accept the new knowledge and be successful in using new technologies.

Emerging trends

New technical and organizational solutions to speed up deployment of the networks and to facilitate access and learning

Opportunities

- New technologies to provide access like high altitude aircraft unmanned that will fly at 20 kilometer three months at a time, solar powered and meshed together with laser and radio beams
- Artificial intelligence and cognitive sciences

Key Challenges

- Broadband uptake due to high costs
- Access to knowledge about ICTs for development
- Lack of local content and languages issue
- Bigger involvement of civil society at local level

Case Examples

- The rapid and successful deployment of fast broadband and different platforms for e-services in Thailand
- Efficient use of such limited resources as radio spectrum in Colombia
- Countrywide projects implanted in the Zimbabwe with special attention to languages issues
- International cooperation and assistance

Road ahead

Coming World Radio Conference of 2019 to make important decision further facilitating use of radio spectrum Access to Information and Knowledge for All

The WSIS Forum and related initiatives are important to providing countries with practical help and assistance.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Link with the WSIS Action Lines and Sustainable Development Goals (SDGs)

There were clear links to the WSIS Actions Lines but also to specific SDGs such as those concerning education; access; healthcare and poverty reductions.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

United States

H.E. Ms Julie Napier Zoller, Acting U.S. Coordinator for International Communications and Information Policy, International Communications and Information Policy (CIP), United States Department of State

I am honored to be here as a high level representative to this 2017 WSIS Forum on “Information and Knowledge Societies for SDGs”.

I join with so many others here at the Forum in our common pursuit of increasing access to and use of the Internet for the world’s citizens and businesses. We believe this goal is at the heart of creating “Information and Knowledge Societies for SDGs” and that it can be achieved when countries integrate Internet connectivity as a key part of their national development strategies, international institutions prioritize Internet connectivity as a development goal, and we all take action to enable and deploy innovative technologies.

The McKinsey Global Institute found that the direct impact of data flows raised world GDP by 3.0 percent annually, or \$2.2 trillion in 2014. According to a World Bank study, a 10 percent increase in broadband penetration in developing countries correlates with a 1.4 percent increase in GDP (a remarkable multiplier and return on investment). These often cited statistics bear repeating.

This isn’t just theoretical – this is happening before our eyes right now. The Boston Consulting Group estimates that India’s internet economy will double to \$250 billion by 2020, making up 7.5% of India’s GDP. In order to promote this kind of internet-driven economic development, the

U.S. Overseas Private Investment Corporation (“OPIC”), has extended over \$1 billion in current financing for information and communications technology projects worldwide. In India, OPIC provided up to \$171 million in financing to Tikona Digital Networks to expand its low-cost, scalable wireless broadband networks across India, which increases Internet adoption among residential and commercial consumers alike.

These benefits do not accrue only to “technology” companies. It is estimated that 75 percent of the benefits derived from information and communication technologies (ICTs) go to businesses in other sectors. It is rapidly becoming a reality that all companies are “technology companies.”

This extension of technology to the broader economy has tangible benefits for people’s daily lives. With Internet technology, doctors are using new tools and better tracking the health of their patients, farmers

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

can access weather and market data, companies manage supply chains across borders more effectively, governments can more accurately track and project their tax revenues and expenditures, and countless other applications. As I've travelled around the world, I've seen first-hand how entrepreneurship, economic growth, and social well-being blooms where connectivity is good and suffers where connectivity is poor.

Half the world's population or nearly 3.8 billion people are connected to the Internet today. And trillions of devices are set up to join them with the Internet of Things. That aggregate connectivity holds the potential to lift people out of poverty, formalize the informal economy, increase the efficiency of supply chains and the productivity of workers, and in turn raise wages and make possible activities that we have not even dreamed up yet.

It will take open markets, stakeholder participation, and thoughtful, forward-looking policies, to enable the Internet's future potential for accelerating social and economic development. It is so important that we work together to create the right policy, legal, and regulatory conditions in our countries and across borders. This means maintaining an open, interoperable, reliable, and secure internet that fosters efficiency, innovation, communication, and economic prosperity, while respecting privacy and guarding against disruption, fraud, and theft. It also means ensuring the free flow of data across borders and rejecting the impulse to regulate or tax value-added services or new technologies like

Artificial Intelligence. If we get the policies wrong, we risk stifling rather than stimulating innovation and missing out on that 1.4 percent increase in GDP that comes with a 10 percent increase in broadband penetration.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Colombia

Dr. Martha Liliana Suárez Peñaloza, Director General, Agencia Nacional del Espectro (ANE)

El Gobierno de la República de Colombia, presente en la Cumbre Mundial de la Sociedad de la Información, que se está llevando a cabo entre los días 12 al 16 de junio en Ginebra, Suiza:

Comprometido con la Declaración de Principios de Ginebra sobre “Construir la Sociedad de la Información: un desafío global para el nuevo milenio”, así como con el compromiso de todos los pueblos del mundo de enmarcar esta construcción alrededor de la persona humana, el derecho de los países al desarrollo y que todas las comunidades puedan emplear plenamente sus posibilidades en la promoción del desarrollo sostenible;

Comprometido en la consecución de los lineamientos de la Declaración de Principios de Ginebra, especialmente, aquellos tendientes a garantizar los derechos de los niños, las mujeres, las poblaciones vulnerables de la Sociedad, en particular, las personas internamente desplazadas, los desempleados, las personas menos favorecidas, en condición de discapacidad, indígenas y grupos tribales, personas de bajos recursos y las personas mayores.

Comprometido con el cumplimiento e implementación de la Agenda 2030 y los Objetivos de Desarrollo Sostenible, por lo cual, el Presidente Juan Manuel Santos firmó el Decreto 280 del 2015, “Por el cual se crea la Comisión Interinstitucional de Alto Nivel para el alistamiento y la efectiva implementación de la Agenda de

Desarrollo Post 2015 y sus Objetivos de Desarrollo Sostenible –ODS”.

Comprometido con las siguientes iniciativas:

- a) El uso de datos abiertos para implementar el sistema de monitoreo para el seguimiento al cumplimiento de los ODS.
- b) El rol transversal en la utilización de datos abiertos, en el marco de los 17 ODS, sus 169 metas y sus 230 indicadores.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

c) La Política del Plan Vive Digital y el Plan Vive Digital para la Gente y su alineación con la agenda de desarrollo enmarcada en los ODS.

d) La política de espectro 2015-2018 propuesta por la Agencia Nacional del Espectro y adoptada por el Ministerio de TIC.

e) El Centro de Innovación en Gobierno Electrónico del Ministerio de Tecnologías de la Información y las Comunicaciones - MinTIC, como herramienta de implementación de los ODS, específicamente en relación con los criterios de selección de las temáticas trabajadas.

f) Por parte del MinTIC: (i) la meta 1.4 referente al acceso a nuevas tecnologías, (ii) la meta 4.9 que hace referencia a al aumento en las oportunidades de estudio en programas TIC a través de becas y

(iii) la meta 9.8 sobre el aumento del acceso a las TIC y al acceso universal y asequible a Internet, teniendo siempre presente las interrelaciones con los demás Objetivos y metas de la Agenda.

Reconociendo la existencia de la brecha digital en el acceso a la información, así como los inconvenientes que ésta provoca en los países en vías de desarrollo, y la necesidad de generar recursos públicos para facilitar el acceso a las TIC, se estableció la Agenda de Túnez, con el fin de crear una Sociedad de la Información inclusiva y para todos, que realice un despliegue de infraestructura, reduzca la brecha digital y genere capacidades y competencias TIC en todos los sectores de la población;

Reconociendo la importancia de materializar las acciones contenidas en la Agenda de Túnez;

Reconociendo la importancia del espectro como un recurso escaso fundamental para el desarrollo de las TIC en el mundo, cuya adecuada gestión y planeación son fundamentales para el desarrollo de la economía de los países.

Declara que diseñó e implantó una política de conectividad y despliegue de la infraestructura de Internet en todo el territorio colombiano, la cual se integró en dos planes de política pública, a saber: el Plan Vive Digital

(2010 – 2014) y el Plan Vive Digital para la Gente (2014 – 2018). Los dos con el siguiente objetivo:

“Impulsar la masificación del uso de Internet, la apropiación de tecnología y de la creación de empleos

TIC directos e indirectos para contribuir de esta manera a reducir el desempleo, disminuir la pobreza y aumentar la competitividad del país”.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Declara que para efectos de darle continuidad al Plan Vive Digital, creó en el 2014 el Plan Vive Digital para la Gente (2014 – 2018). En este caso, tuvo como pilares fundamentales, la promoción del desarrollo de aplicaciones y contenidos con impacto social, la consolidación de un gobierno digital y la apropiación de las TIC en todo el país. Esto es, la necesidad de generar diferentes enfoques de región, empleo y educación para que las personas, de acuerdo con sus principales necesidades, pudieren hacer uso de la tecnología para conectarse.

Declara haber dado un salto en materia de datos abiertos, para así, transformar el Gobierno, pasando de ser un Gobierno en Línea a ser un Gobierno Digital, es decir, pasando de proveer servicios en línea, a constituirse en un Gobierno cuyos datos e información sean abiertos y transparentes para todos los ciudadanos.

Manifiesta que, como resultado, en la implantación del Plan Vive Digital y el Plan Vive Digital para la Gente, se han cumplido las siguientes metas:

- a) Municipios conectados con fibra óptica: en el 2010 eran 200, hoy en día son 1.075.
- b) Conexiones de banda ancha: en el 2010 había 2,8 millones, hoy en día son 15,3 millones.
- c) Internet móvil por demanda (3G y 4G): en el 2010 eran 0,8 millones, hoy en día son 13,4 millones.
- d) Internet de Alta Velocidad en zonas apartadas: en el 2010 no existían, hoy en día tenemos 15 y la meta que tenemos son 47 zonas apartadas.
- e) Cables submarinos: en el 2010 contábamos con 3, hoy en día tenemos 10.
- f) Centros de acceso a internet y tecnología - Puntos y Kioskos Vive Digital: en el 2010 no existían, hoy en día tenemos 2.642.
- g) Y finalmente, para el 5 de junio de este año, se logró instalar 568 Zonas Wifi Gratis en diferentes regiones del país.

Manifiesta que con el objetivo de lograr que la inclusión digital sea una realidad:

- a) En el 2010, únicamente 100.000 ciudadanos contaban con acceso a alfabetización digital, hoy en día, contamos con 6.700.000.
- b) La aplicación de “Convertic #TecnologíaParaVer” cuenta con 260 mil descargas. Esta aplicación promueve la inclusión y autonomía de 1.2 millones de personas con discapacidad visual y baja visión en Colombia gracias al uso y apropiación de las TIC. Por medio de este proyecto se ofrece a nivel nacional la descarga gratuita del lector de pantalla JAWS y el magnificador MAGIC.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

c) El Centro de Relevó ha gestionado 1.800.000 llamadas efectivamente realizadas. Este es un proyecto diseñado entre el MinTIC y la Federación Nacional de Sordos de Colombia, FENASCOL, por medio del cual las personas sordas: 1. pueden comunicarse con cualquier persona en todo el país y viceversa. 2. pueden solicitar el servicio de interpretación cuando necesiten ser atendidos en las diferentes instituciones del país. 3. Pueden acceder al conocimiento y uso de las TIC y 4. Pueden formarse como intérpretes de la Lengua de Señas Colombiana.

d) Para el 2010, la media era de 24 niños por terminal en sedes educativas públicas, actualmente, por cada 2 niños se accede a un terminal.

e) Finalmente, Cine para Todos ha realizado 400 funciones en 12 ciudades del país. Este proyecto hace parte de la iniciativa TIC y Discapacidad que liderada el MinTIC, y que es realizada en convenio con la Fundación Saldarriaga Concha y en alianza con Cine Colombia, que busca ofrecer a las personas con discapacidad nuevos espacios de entretenimiento gracias a las facilidades de inclusión y producción de contenido que brindan las TIC.

Manifiesta que con el fin de promover la Industria TI para que esta compita con empresas de talla mundial, ha:

a) Promovido los beneficiarios para becas de talento TI: hoy en día tenemos 9.274 beneficiarios. Talento TI es una iniciativa del Plan Vive Digital para la Gente que busca promover la formación de los colombianos en carreras relacionadas con las tecnologías de la información para impulsar la competitividad, la investigación, la innovación y la proyección internacional del sector TI del país.

b) Promovido el porcentaje de pequeñas y medianas empresas que usan las TIC: en el 2010 únicamente el 7% las utilizaba y hoy en día el 75% de las MYPIMES usan las TIC.

c) Fomentado la creación de Empresas del Sector TI: para el 2011 existían 2.657 y hoy en día existen 5.404.

d) Acercado a los emprendedores con la demanda de sectores productivos: se crearon 1288 equipos de emprendedores acompañados en 29 ciudades y se incentivó en la creación de una estrategia de impulso para nuestro "Team Startup". Este equipo está conformado por emprendimientos digitales que por sus buenas prácticas, logros, tracción, ventas, crecimiento, inmersión en nuevos mercados, inversión, entre otros, están a nivel de importantes Startups mundiales y son referente para los colombianos a nivel nacional e internacional.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

e) Por último, ha alentado las ventas del Sector TI se han incrementado: para el 2013 eran de \$2.034 billones de dólares y hoy en día son de \$3.300 billones de dólares.

De igual forma, manifiesta que ha adelantado actividades de planeación de espectro para garantizar la disponibilidad del recurso que permite soportar el crecimiento de las redes móviles de próxima generación.

Estas iniciativas para la gestión eficiente e innovadora del espectro radioeléctrico han sido premiadas por organismos internacionales como la GSMA (en 2016) y la DSA (en 2017).

Finalmente, manifiesta haber avanzado hacia un Gobierno digital transparente y eficiente, situación que lo posiciona como el #1 en Latinoamérica y el #4 en el mundo en temas de datos abiertos¹. Se ha generado una Política Nacional de Seguridad Digital que define los lineamientos para la efectiva gestión pública y privada de los riesgos inherentes al nuevo entorno digital, ha creado y fomentado dos Centros de Excelencia y Apropiación en temas de Big Data e Internet of Things que promueven el aprovechamiento de estas tecnologías en el gobierno y el sector privado, ha desarrollado la página web www.sivirtual.gov.co, la cual le permite al ciudadano gestionar aproximadamente 714 trámites en línea, y por último, ha instado por promover la interoperabilidad de 103 entidades con servicios de intercambio de información publicados.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION THREE: WSIS Action Lines and the 2030 Agenda

High-Level Track Facilitator (HLTF): Ms Reine Essobmadje, CO-Founder, Digital Coalition

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator UNDESA** – Ms Marion Barthelemy, Director, Division for Public Administration and Development Management (DPADM)
3. **Côte d'Ivoire** – S.E. M. Bruno Nabagné Koné, Minister, Spokesman for the Government, Ministère de l'Economie Numérique et de la Poste
4. **Nigeria** – H.E. Mr. Abdur-Raheem Adebayo Shittu, Minister of Communication
5. **Malawi** – Mr. Godfrey Itaye, Director General, Malawi Communications Regulatory Authority (MACRA)
6. **Kuwait** – Mr. Mohammad J. Al-Tura, Chief, Information Technology Sector
7. **FAO** – Mr. Samuel Varas, Director, Information Technology Division (CIO)
8. **IEEE** – Ms. Karen Bartleson, IEEE President (United States)
9. **CMAI** – Mr. NK Goyal, President
10. **Just Net Coalition** – Mr. Norbert Bollow, Co-convenor (India (Republic of))

Introduction:

Stakeholders are exploring the lessons learnt and their next move as to achieve the WSIS action lines within the 2030 agenda

Vision:

- To adapt SDGs per country economic and social context
- To Integrate SDGs in governmental policies
- To integrate ICT in all high level political forum
- To integrate ICT in national financial Law
- To have multi-stakeholder's forum where ICT shall be cross-functional
- To connect the unconnected as access must be anywhere, anytime with any devices

Fresh priorities:

- Financing ICT

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Balance Power between private sector interests and netizens concerns
- ICT role for social regulation, peace and transparency

Emerging Trends:

- Communities program to better address communities' needs
- Digital financing services within trustworthy and secure cyberspace
- Promotion of Trust and confidence in usage of ICT
- Rethink international financing programs by integrating ICT as an enabler in each project (e.g Food Program,...)
- The greater innovations are coming out of technology

Opportunities

- Increase ICT contribution to GDP for oil dependant countries
- Reduce unemployment as ICT sector is a great provider of jobs
- Smart cities start with basic needs such as smart water and smart energy
- Transparency, efficiency and good Governance with e-Government solutions
- Young innovators shall be active in producing local content based on their user experience

Key Challenges

- Connecting the unconnected with cost-efficient solutions (satellite solutions)
- Financing ICT programs
- Attracting Foreign Direct investments

Link with WSIS actions lines C1, C7 e-Gov, C11

- C1 :
 - ICT to be include in budget during annual budget statement at National Assembly
 - ICT to be cross-functional to primary, secondary and tertiary sectors
- C7, e-Gov
 - ICT as an enabler of greater efficiency
- C11,
 - Multistakeholders forum should include ICT as cross-functional disregard to the thematic

Case examples:

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- **Côte D'Ivoire:** ANSUT is the universal service agency in Côte d'Ivoire (www.ansut.ci) in charge of bridging the digital divide across country. To finance connectivity, Ansut has an initial funding based on a national Tax of 2% of Telecommunications operators. Ansut has been able to raise additional funds (> 100 billion euros) from the market to finance its broadband's program in Côte d'Ivoire.
- **Malawi:** Using PPP to finance fiber optic networks, launch of connected schools program
- **Kuwait:** Focus on access (infrastructures), education, healthcare, smart cities, smart e-commerce and cybersecurity
- **Nigeria:** National ICT roadmap 2017-2020 with the launch in August 2017 of Smart cities program. Increase penetration rate with various solutions such as satellite. NIGCOMSAT is a national agency in charge of satellite communications.

Road Ahead

- Align SDGs with ICT and national priorities which may differ across regions and countries
- Increase collaboration between UN agencies and other stakeholders
- We leave in a VUCA environment
 - V for Vulnerability and we need a clear Vision
 - U for Uncertainty and we need Understanding
 - C for Complexity and we need Clarity
 - A for Ambiguity and we need Agility

A clear ICT vision will tackle national challenges providing clarity and understanding to offline communities as to achieve the 2030 agenda with agile and flexible solutions.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

FAO

Mr. Samuel Varas, Director, Information Technology Division (CIO)

Madam Irina Bokova, Chairperson of UNGIS
Ministries of Telecommunications, ICTs and other sectors
My colleagues from the UN System
All WSIS Forum participants,

We are in Geneva this week to take a new step towards a consensus within the SDGs framework. More than to promote the 17 goals and to discuss theoretical problems, we need to collect experiences in order to learn in collaboration with civil society, universities and private companies, the best way to use information and communication technologies (ICTs) to face the real challenges.

Today, as stated by our Director General, Mr. José Graziano da Silva, nearly 800 million people are extremely poor and chronically undernourished, while 1.9 billion are overweight, of which 600 million are obese. In the rural areas, reality is most dramatic, considering that 80 percent of the world's hungry and poor live there. FAO believes that food security can be the common thread that links the different challenges the world faces in building a sustainable future.

In FAO's case, ICTs focusing on development have strong potential for driving economic growth, promoting climate smart agriculture, improving livelihoods and increasing the efficiency of agricultural value chains. Digital solutions that can be harnessed for e-agriculture may include devices, networks, services and applications. These can range from cutting edge internet-based applications, sensing tools, artificial intelligence and data analysis technologies to others that have been around for much longer, such as radio, telephones, television, telecommunication networks, mobile phones and satellites. We can make a difference if we are able to combine, in an innovative perspective, the best channels, the best processes and the best tools to make a change where it is most necessary.

Improving access to valuable information can help agricultural stakeholders to make informed decisions and use the resources available in the most productive and sustainable manner. In a sector that is becoming increasingly knowledge-intensive, having access to the right information, at the right time, in

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

the right format, and through the right channels can make a crucial difference in the livelihoods of people involved in agriculture and related fields.

Ladies and Gentlemen,

Applying innovative ways to use ICTs in the rural domain, with a primary focus on agriculture (including farming, fisheries, livestock, forestry etc.) can boost agricultural and rural development. FAO is developing and deploying new ways of packaging and delivering digital value added services to combat hunger and all forms of malnutrition; reduce poverty; promote food security; increase incomes; improve resilience and mitigate the effects of climate change. The proposed innovative solutions seek to maximize economic, social and environmental impact by finding scalable and sustainable models for the process and networks that bring existing or new agricultural products, processes and practices into social and economic use, connecting promising ideas and impact investment funders. Here, the keyword is “replicable”.

FAO believes that UNGIS and this High Level audience play an important role to build a framework of cooperation and to facilitate collaboration between UN System and other stakeholders in terms of ICT for development. We need to construct partnerships to conceive and to develop policies and programs that help the inhabitants living mainly in the least developed countries to access the best and most suitable experiences with ICTs in order to reduce the lack of information and communication, improving livelihoods and incomes for families in rural communities.

Just Net Coalition

Mr Norbert Bollow, Co-convenor

From your civil society perspective, what is the greatest obstacle to sustainable development as per the 2030 agenda?

I would suggest that **complexity** is the greatest obstacle.

The digital transformation is a driver of rapid change and great complexity. Even with the best intentions of truly furthering the 2030 agenda, the complexity of it all can easily be overwhelming.

It is really hard to personally work your way through all this complexity in order to develop views and convictions which are both technically and socially aligned with reality and with the 2030 agenda.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Consequently, business lobbyists have an unhealthy, great amount of influence on us. What the business lobbyists tell us are often not bad things. They propose practical solutions to challenges that we care about. Still what they tell us is also very much driven by their business interests.

For obvious political reasons, law enforcement institutions, in particular those who are tasked with trying to prevent terrorism, are also very influential. By contrast, there is no such powerful lobby for the human rights of refugees or for the social and economic human rights of the people who are part of other disadvantaged communities.

Civil servants bring with them some awareness of issues that they personally have cared about for a long time. But once in office, complexity paralysis can set in, the symptoms of which are that it becomes very difficult to listen and learn and take appropriate action on further concerns beyond some good causes that you already care about personally and some of the government action that businesses ask for, and some of the government action that law enforcement asks for. This means that in many other regards, essentially only lip service will be given.

Complexity paralysis makes governments unable to truly listen to *all* the various important civil society concerns. It prevents truly implementing the 2030 agenda. Some of these failures to fully implement the 2030 agenda are in fact human rights violations.

What do you recommend to governments for overcoming this obstacle?

I think the first step consists in recognizing that the digital transformation does not consist only in opportunities, but that it is also a driver of great complexity which presents a huge challenge.

Then invest in building the capacity for adequately dealing with this complexity. At the personal level, this means to learn to use cognitive tools for managing complexity, such as the *logic trees* of the *theory of constraints*.

More broadly, governments need to organize formal discourse processes on public policy topics which must be designed to allow everyone to ensure that their views and concerns are adequately taken into consideration.

A good discourse process is one which reaches a consensus when that is possible, and which in other cases will explore and document the disagreements. In regard to many practical matters of public policy relating to digital governance, the views and perspectives of social movements differ very significantly from the views and perspectives of the global digital companies. In those cases, the discourse process needs to clarify what precisely these different views are and what the corresponding public policy options are —

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

taking into consideration that international human rights law provides absolute constraints, so that nothing which conflicts with international human rights law is acceptable for consideration as a policy option. Then these policy options can be given as an input to a democratic parliamentary process to decide between them.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION FOUR: Access to Information and Knowledge for All

High-Level Track Facilitator (HLTF): Mr. Justin Caso, Technology Policy and International Affairs Senior Advisor, Institute of Electrical and Electronics Engineers (IEEE)

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator UNESCO** – Dr. Indrajit Banerjee, Director, Knowledge Societies Division, Communication and Information Sector
3. **Cuba** – S.E. Sr. Wilfredo González Vidal, Viceministro, Ministerio de Comunicaciones
4. **Sri Lanka (Democratic Socialist Republic of)** – Mr. Kingsly Fernando, Director General, Telecommunications Regulatory Commission of Sri Lanka
5. **European Commission, DG CONNECT** – Mr. Marco Marsella, Head of Learning, Multilingualism, and Accessibility Unit (Luxembourg)
6. **25th Century Technology Limited** – Dr. Kwaku Ofori-Adarkwa, Chief Executive Officer (Ghana)
7. **European Language Technology Company "Tilde"** – Dr. Andrejs Vasiljevs, Chief Executive Officer (Latvia)
8. **Centre for Communication Governance at National Law University Delhi** – Ms. Chinmayi Arun, Executive Director (India (Republic of))
9. **ARTICLE 19** – Ms. Mehwish Ansari, Digital Programme Assistant

Introduction:

While there are many remaining challenges in achieving access to information and knowledge for all, there are also many opportunities to achieve this goal through collective action of all stakeholders.

Vision:

Through innovative technical solutions in collaboration with various groups, access to information and knowledge for all can be achieved in order to provide access and the necessary local content in order to allow them to thrive.

Fresh Priorities:

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Local content and language are vital to spur economic and social development
- In order to successfully achieve access to information and knowledge for all, the costs to connect must be reduced to gain widespread adoption

Emerging Trends:

There is a greater understanding that it is necessary to do more than merely connect the unconnected. While having a connection is necessary, education and training is vital to successful implementation that will lead to economic and social development.

Opportunities:

Deployment can occur much more rapidly through collaborative efforts, such as public/private partnerships. In addition, widespread adoption could occur through the government regulations that are aligned to the needs of the local community.

Key challenges:

- Government regulations that do not address local needs.
- Very little options to access the internet for individuals with disabilities

Link with the WSIS Action Lines and the SDGs:

There are clear links to the WSIS Action Lines and the SDGs, especially in regards to gender equality and the empowerment of women and girls.

Road ahead:

Even though there are challenges, there is a very positive vision for the future and that by working together, achievement of the SDGs is within sight through collaborative and innovative activities by all stakeholders working together.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Cuba

S.E. Sr. Wilfredo González Vidal, Vice Minister, Ministerio de Comunicaciones

Intervención de Wilfredo González Vidal, viceministro del Ministerio de comunicaciones de la República de Cuba, en el segmento de Alto Nivel del Foro de la Cumbre d la sociedad de la Información, en Ginebra, Suiza, el martes 13 de junio de 2017.

Señor Presidente, Ministros, Jefes de Delegaciones, representantes de Organismos Internacionales y otros delegados:

Reciba, señor Presidente, a nombre de la República de Cuba la más sincera felicitación por su elección a presidir este importante Foro, y el compromiso de contribuir al éxito de este segmento de Alto Nivel.

Nuestro gobierno sostiene que la tecnología no es neutral; responde siempre a los intereses de quienes la poseen y la aplican. Por ello la extensión de las TIC en el mundo, paradójicamente, ha contribuido al incremento de la brecha socioeconómica y cultural entre ricos y pobres; poseedores y desposeídos; y explotadores y explotados.

Es fundamental eliminar los obstáculos para acceder a las nuevas tecnologías por parte de los países en desarrollo por lo cual se debe prestar atención a la insuficiencia de infraestructura de los países del tercer mundo. Es preciso lograr que los beneficios de las nuevas tecnologías, especialmente las TIC, estén al alcance de todos, pero ello tiene que ser de forma segura.

El ciberespacio y el acceso a Internet deben ser considerados como recursos estratégicos y bienes comunes de toda la humanidad. La multiplicación de ciberataques a escala mundial constituye una grave amenaza a la que la UIT debe prestar mucha atención.

Por consiguiente, nos preocupa la potencial militarización del ciberespacio y el incremento del uso ilícito de las TIC con propósitos de que se utilicen para subvertir el orden constitucional soberanamente decidido en cada país.

Los principios de igualdad soberana, integridad territorial y la no intervención en los asuntos internos de los Estados, consagrados en la Carta de las Naciones Unidas, deben respetarse en el espacio virtual. Por lo tanto, constituye un imperativo impostergable la elaboración de instrumentos jurídicos complementarios al Derecho Internacional para la regulación de las actividades en el ciberespacio

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Señor Presidente:

A pesar de las limitaciones financieras de nuestro país, y del Bloqueo económico, financiero y tecnológico que el gobierno de los Estados Unidos de América mantiene sobre Cuba, continuamos avanzando en la creación y fortalecimiento de la infraestructura tecnológica. Por otra parte hemos desarrollado importantes aplicaciones en los principales sectores del país, algunas de ellas mostradas en el taller que realizamos en la tarde de ayer.

El gobierno cubano realiza grandes esfuerzos para el desarrollo de las TIC, dando prioridad a su uso en la educación, la salud, el desarrollo científico y cultural, y como medio para incrementar la productividad y el crecimiento económico. Además, se le da preferencia a los servicios destinados a la población, creando miles de centros públicos desde los cuales se accede a la información.

Le expresamos la voluntad del estado cubano de continuar realizando esfuerzos para fortalecer y desarrollar el acceso a las TIC, dentro de un marco económico de limitaciones, siempre con la visión de nuestros líderes de conectarnos al conocimiento, y participar del concepto de compartir y no excluir, como un imperativo estratégico para la supervivencia de nuestras identidades culturales.

Por último, invitamos a todos a participar en el evento CIBERSOCIEDAD 2017 que se desarrollará en octubre del presente año en Varadero, y en la XVII edición de la Convención y Feria Internacional INFORMATICA 2018 que se desarrollará en La Habana en marzo del próximo año.

MUCHAS GRACIAS

Sri Lanka (Democratic Socialist Republic of)
Mr. Kingsly Fernando, Director General,
Telecommunications Regulatory Commission of Sri Lanka

The basic foundation for an information society is the availability of ubiquitous information and communication infrastructure. Sri Lanka has implemented the specific WSIS outcomes to a great extent with connectivity being ubiquitous and affordable throughout the Country. The Telecommunication Regulatory Commission of Sri Lanka

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

has created a regulatory framework that fosters investments in networks, stimulates growth and provides connectivity at affordable rates.

Sri Lanka's mobile operators have deployed cutting edge technologies for the provision of mobile broadband. Sri Lanka is a pioneer in the region in launching 3G technology and the first to deploy 4G-LTE networks. 3G and 4G technologies cover in excess of 85% of the population and this is expected to grow further with the promotion of healthy competition. Wide availability of mobile broadband services has increased internet penetration providing equal access information and e-services resulting in inclusive development. The recent introduction of low cost smart devices will increase the affordability of mobile broadband services.

The aim of the Government through its many initiatives is to improve the quality of life of citizens through greater connectivity to access better public services, competitive market environments and greater learning opportunities.

The Government has initiated projects to encourage the use of ICT's by SME's and especially self-employed persons and school leavers.

High quality internet is a pre-requisite to enabling freedom of expression, enhancing the skills of our people and ensuring socio economic growth. The access to free wifi programmes of all licensed operators in setting up of hotspots in public places across the country is a step towards achieving this goal. Concurrently we are promoting and accelerating high speed broadband development reaching out to all parts of the country including rural villages for digital education and digital commerce.

Finally, the vision of the country is to make broadband affordable and ubiquitous so that all citizens can access the Internet irrespective of their locality which leads to information society.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

25th Century Technology Limited

Dr. Kwaku Ofosu-Adarkwa, Chief Executive Officer (Ghana)

Improving Inclusive Business Models to Enable the Private Sector Play Key Role in ICT Innovative Solutions

Inclusiveness and Access to Information and Knowledge for All, irrespective of geographic location, is a key theme that continues to receive the attention and discussions on all WSIS platforms. This is so because nations, worldwide, have recognised the developmental opportunities that the emerging information age, characterised by Information and Communication Technologies (ICTs), bring to close the digital divide. Under the MDGs, ambitious agenda was therefore set to address the critical issue of including the populace in far flung areas in the policy decision making process. This was with the view to bridge the growing levels of inequality in governance, culminating in the exclusion of majority of the populace from enjoying the benefits that ICT brings. To sustain the efforts to build inclusiveness of the entire citizenry, under the Sustainable Development Goals (SDGs) Goal 5, the aim is to “**achieve gender equality and empower all women and girls**”, while under Goal 16 the aim is to “promote just, peaceful **and inclusive societies**”.

In facilitating the attainment of the goal of inclusiveness, that will also empower knowledge development, two questions are posed bearing in mind the case study of Ghana. The evaluation of the questions is to enable the examination of the involvement, importance and usefulness of innovations to the citizenry, particularly those at the local levels of governance; the confirmation and addition to the digital divide and speak to the preferred bridging approach paying attention to gender issues.

These two questions are:

- a) What level of impacts are ICT-enabled changes having at the local, and traditional governance levels?

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

b) What is the extent of the gap in the diffusion of ICT in governance at the local level?

In the case study, Ghana, like many developing countries, since 2003 has embraced the deployment of ICT as an inclusive tool to drive national development efforts following the development of the Ghana ICT for Accelerated Development (ICT4AD) Policy. Within the policy context strategies have been developed to help to focus and facilitate the development, deployment and usage of ICT to improve service delivery to enhance the livelihood of Ghanaians. The objective is to help optimise the contribution of ICTs for the socio-economic development of the country. It is in this context that an e-Government strategy for Ghana had been developed with a focus on facilitating effective delivery of government services to the citizenry at the local level. Notwithstanding the challenges of the era have been enormous necessitating the need to bridge the digital divide between the urban and the rural populace.

Degree of change and the consequences:

The changes brought by the introduction of ICTs in Ghana have culminated in huge preference for the use of the Internet as a consultation platform. Also on high demand as a new IT mode of communication is the smart phone. Notwithstanding these gains there is also the observed phenomenon of high level of imposition of ICT services on the rural populace creating in its wake a digital divide due to low level of effective consultation. This has culminated in low level of innovation acceptance due mainly to the absence of local content. With regard to ICT access, use and knowledge there is high digital illiteracy and seclusion resulting in low degree of confirmation of innovations that benefit the poor and vulnerable in society. The absence of open data/databases and the Freedom of Information Act (FOI) is also a barrier to grass roots communication.

How can this be remedied.

There is the need for Ghana to develop digital policies that will promote and build upon the level of integration, collaboration and innovation between the public sector, private sector, NGOs and the civil society at large. Such digital policies dimension (absent in its 2003 ICT4AD Policy Framework) should address the integration of the poor into their strategic focus. Through that

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

collaborative approach, innovations that work for the poor including women and girls' access to ICT can be meaningfully accepted and appreciated. Subsequently the collaborative innovative tools that will be developed by the Private Sector will aid the mass uptake of ICT tools for interaction in the related areas to close the digital divide. Some of the policy areas that need re-examination to make ICT tools cost effective and accessible include: Infrastructure Sharing & Open Access, Market Structure, Spectrum Policies, Device Access, Digital literacy, Local content, etc.

In general, Ghana's communication networks, though massive, have not had optimal comprehensive usage because of high cost of service delivery considered unaffordable by the majority of the citizenry. Efforts should therefore be made to achieve universal access and reach to communication networks and services regardless of where one lives. The digital policy review process should also aim at working towards consumer programmes to reverse the trend where women tend to have less access than men to ICT facilities that do exist such as smart phones and access to community information centres.

Fostering an active collaboration between policy makers, entrepreneurs and private sector and allowing innovation practitioners to work across the entire ICT ecosystem is thus key to bridging the digital divide. In Ghana, for instance, an International NGO - Alliance for Affordable Internet (A4AI) - operates its lobbying initiatives with an objective geared towards the goal of making Internet and broadband services affordable for all by ensuring that no one pays more than 2% of Gross National Income Per Capita for 1G broadband connection. This the benchmark that has been set for affordability and embraced by the government. It behoves the public sector to support the private sector to aid this transformation which will largely aid Internet affordability to propel knowledge management in all the settings including schools, health centres etc.

Ghana is among many countries where the Digital Innovation ecosystems are flourishing yet the country is struggling to reach critical use of ICT to aid total inclusion of the citizenry in the knowledge management revolution. Going forward there is no need for Ghana to reinvent the wheel in addressing these challenges. Thankfully, the ITU has developed a multi-stakeholder and multi-sectoral Digital Innovation Framework (DIF), with aim to help countries, cities and

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

ecosystems to be empowered to accelerate digital transformation that promotes total inclusiveness.

The uniqueness of the DIF is that it is based on a model that requires governments and for that matter the public sector to partner the private sector to help build entrepreneurial skills set. The private sector and indeed NGOs are considered as viable stakeholders to help co-create specific policy conditions out of which specific innovative projects can be developed to propel the inclusive digital transformation in each country. It is in the realisation of the role of the private sector that the 25th Century Technology Ltd, a fully-owned Ghanaian Company registered to undertake the principal activity of ICT Services and Telecommunication Solutions with vast experience in ICT value-added services and supportive infrastructure has positioned itself to participate in such collaborative partnerships. ICT is indeed the platform for inclusiveness and knowledge management and all efforts should be made to achieve this goal.

European Language Technology Company "Tilde"
Dr. Andrejs Vasiljevs, Chief Executive Officer (Latvia)

I would like to draw your attention to the importance of language diversity in the Information and Knowledge Society. Language enables us to think, to communicate, to preserve and share knowledge and culture, and to pass it to the next generations. Language is the key element of our social and business communication, it is an essential part of our identity, it's the social and cultural treasure of every nation.

Diversity of languages on our planet is a source of richness and diversity of humankind. Language diversity opens numerous windows to conceptualize and understand the world we live in.

For only half of the world's population is their mother tongue one of the world's 15 largest languages. Limiting content and technologies to just a few dozens of the world's economically

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

powerful languages would exclude hundreds of millions of people from the benefits of the Internet and digital technologies.

Nobody should be discriminated against in the digital world because of his or her mother tongue. This is why the WSIS Plan of Actions urge the development of content and technical conditions to facilitate the use of all world languages on the Internet.

Language technologies are essential to make information technologies and the Internet truly multilingual. Those languages that are not sufficiently supported in the digital technologies face the risk of digital extinction.

Technological development of language cannot be left solely to market forces. Technology for a smaller language requires as much or even more investments than for a world dominating language. For this reason, support for many languages in digital technologies is still rudimentary or non-existent at all.

Concerted actions on the local, national and international levels can efficiently address this situation.

Let me share an example of Latvia. Latvia is not a big country and the Latvian language is spoken by about 2 million people only. Nevertheless, it's the language of a rich cultural heritage, active social and economic development. It is one of the 24 official languages of European Union.

Like most of European languages, soon after the PC revolution Latvian got basic language support such as fonts, keyboards, and spelling checking to enable writing in Latvian. At the same time a comparative study of the situation of European languages showed that Latvian is among those 21 European languages that are weakly supported to be efficiently used in the digital age and face a long-term risk of digital extinction.

Awareness of this situation helped to launch targeted actions to advance the development of essential language technologies and tools. Efficient cooperation of language technology developers, researchers and Government lead to rapid and fruitful advancements. Our company

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Tilde is happy to be among the key participants in these exciting developments of innovative language tools and resources.

Novel neural network technologies enabled us to create the world's best machine translation systems that significantly surpass offerings by global players like Google and Microsoft. Machine translation is integrated in the Latvian e-Government infrastructure to enable multilingual e-services. Latvian is now one of the few world's languages which has grammar checking tools. New spoken language technologies now make it possible to dictate text and communicate with your computer and smartphone with your voice. Now Latvian is also a language of artificial intelligence with virtual assistants and chatbots who can talk and answer questions in Latvian. Novel techniques for such a complex language as Latvian have proved to also work well for many other languages.

European Union programmes for the development and utilization of language technologies have served as a major catalyzer of national activities. Concerted actions on the national and European level are successfully cracking the language barriers in Europe, making Europe more united.

To fully achieve the vision of a multilingual Europe without language barriers, the European Parliament has carried out a complex study on scientific and technological option assessment. It provides a number of policy options for the European Union, and proposes to launch an ambitious break-through effort tentatively titled "the Human Language Project". Its ambition is to enable computers to come closer to human ability in understanding the meaning that we express with the help of a language. Although targeted at Europe, this study may be useful to guide other multilingual regions as well.

We believe that targeted actions on all levels and close international cooperation between different regions and stakeholders is essential for creating a truly inclusive multilingual information society.

Thank you.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

ARTICLE 19

Ms. Mehwish Ansari, Digital Programme Assistant

ARTICLE 19 welcomes the opportunity to address the 2017 WSIS Forum as part of the High-Level Policy Session. ARTICLE 19 is an international human rights organization that is committed to the protection and promotion of freedom of expression and information. The work of ARTICLE 19's Digital Programme focuses on the nexus of human rights, Internet infrastructure, and governance. As such, we actively participate in forums across the Internet governance and standards development landscape, including ICANN, the IETF, the IEEE, the ITU, and the IGF.

We commend the commitment of WSIS stakeholders to increase inclusiveness and access to information and knowledge in pursuit of the UN Sustainable Development Goals. The notions of inclusiveness and access pervade the discourse of the information society. Connecting the unconnected. The next billion. These touchstones have become familiar—even foundational—to the policies and practices of WSIS stakeholders across sectors and around the world. However, we remain concerned that the WSIS Forum and its stakeholders have yet to engage with these principles fully.

The outcome of the WSIS+10 review affirmed the commitment of the Tunis Agenda to the right to freedom of opinion and expression and other rights as guaranteed to all individuals by the Universal Declaration of Human Rights (UDHR). In its conclusion, the WSIS review was unequivocal: human rights comprise the very core of the WSIS vision.

How, then, should the information society improve inclusiveness on the Internet in the context of human rights? The Action Lines framework stemming from the WSIS process attempts to explore what universal accessibility truly means. The result cleaves into two major considerations: how many people are connected to the Internet, and how much information is freely available. Clearly, these indicators are important for measuring progress towards greater inclusiveness. But inclusiveness is not simply a numbers game.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The human rights framework necessitates universal access to the Internet. The UN Special Rapporteur on Freedom of Expression first affirmed universal access as a priority for the development of the Internet.¹ The OAS Special Rapporteur on Freedom of Expression subsequently delineated this universality, asserting that, in accordance with international human rights, access to the Internet must be guaranteed across divisions of geography, political affiliation, education, socioeconomic status, gender, and disability.² The WSIS Action Lines attempt to recognize some element of this intersectionality, noting the importance of affordability to access. Nevertheless, it does not go far enough.

The consideration of the civil, political, economic, social, and cultural rights of all Internet users pushes our understanding of what it means to be truly inclusive beyond the myopathy of a quantitative economic perspective. To ensure inclusiveness, a focus on extending and refining the Internet's infrastructure to provide greater and cheaper connectivity is not enough. The information society must also consider how powerful actors can and do exert control over this infrastructure to create, reinforce, and magnify the systems of repression and marginalization that already exist offline. It is from this understanding that we can develop truly meaningful policies to ensure access to information and knowledge for everyone, everywhere.

How, then, should the information society consider access to information and knowledge in the context of human rights? ARTICLE 19 recognizes the importance of ensuring access to information as an indelible part of achieving the ninth Sustainable Development Goal: building a resilient global Internet infrastructure. However, the recent actions of public and private sector stakeholders alike—those that are part of the information society itself—have undermined the right to freedom of expression online, including the right to information. To uphold the integrity of the WSIS vision, all stakeholders of the information society must resolve to:

- **Protect online anonymity and security of Internet users.** The UN Special Rapporteur on Freedom of Expression has previously established that the opportunity for online anonymity and availability of encryption tools are vital to ensuring freedom of expression.³ Anonymity through tools such as the Tor browser allows individuals to disseminate and access any and all information without fear of

¹ Human Rights Council, *Report of the Special Rapporteur on the promotion and protection of the right to freedom of opinion and expression*, Frank La Rue, 2011, p. 22.

² Office of the Special Rapporteur for Freedom of Expression, Inter-American Commission on Human Rights, *Freedom of Expression and the Internet*, 2013, p. 6.

³ Human Rights Council, *Report of the Special Rapporteur on the promotion and protection of the right to freedom of opinion and expression*, David Kaye, 2015.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

repression or reprisal. The use of encryption tools, including secure messaging applications and virtual private networks (VPNs), and the use of secure communication protocols, such as HTTPS to encrypt web traffic, facilitate the open access to information that may be otherwise throttled by censorship or chilled by surveillance.

Recently, the United States and the United Kingdom led a worldwide wave of governments in issuing policies that undermine anonymity and the use of encryption on the Internet. These policies typically orient the restrictions as responses to terrorism and other threats to national security. However, efforts to subvert anonymity and encryption are ineffectual and blunt policy responses that disproportionately impact all Internet users, thereby failing to meet the standards set by the human rights framework. Without the protection of anonymity, open access to information will be a luxury that eludes the most marginalized, including political dissidents and human rights defenders.

If individuals lose trust in the Internet as a civic space and lose confidence in the security of their communications online, accessibility and connectivity as envisioned in the WSIS Action Lines will cease to be salient measures of success; existing and potential users alike will turn away from accessing the Internet altogether.

- **Put an end to Internet shutdowns and other efforts to block or filter the free flow of information.** The prevalence of Internet shutdowns and incidents of censorship are on the rise. Earlier this year, the government of Cameroon ordered CAMTEL, the state-owned telecommunications company, and its subsidiaries to restrict access to social media applications and communications tools throughout the western regions of the country. Earlier this month, the government of Ethiopia ordered an Internet shutdown affecting both the public and private sectors—this incident marks the third shutdown within the state over the last year. The incidents aren't simply disruptions in connectivity. These shutdowns are blunt political tools that are designed to control the flow of information over the networks, thereby stifling protests and other forms of legitimate expression. The impact is clear: Internet users' access to information is fundamentally constrained.

Internet shutdowns and other efforts to block or throttle access to particular content online are explicitly denounced in accordance with the international human rights framework. The Human Rights Council has condemned outright any measure to prevent or disrupt the exchange of information on the Internet.⁴

⁴ Human Rights Council, *Resolution on the promotion, protection and enjoyment of human rights on the Internet*, 2016, p. 2.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The WSIS Action Lines evaluate access to information and knowledge in limited terms, focusing on the number of resources to which Internet users can connect. It is not enough. Access to information must be open and unrestricted across the full diversity of content available on the Internet. The human rights framework emphasizes the discretion of Internet users to decide what information to access.

- **Meaningfully engage with the UN Guiding Principles on Business and Human Rights.** Protecting freedom of expression online is not solely the responsibility of the public sector. The majority of the Internet's infrastructure—as well as the applications running over it—are developed, operated, and maintained by the private sector. As governments increasingly turn to infrastructure to meet political aims, these intermediaries have been increasingly compelled to filter or block individuals' access to information online. At the same time, they may independently engage in practices that challenge the rights of Internet users, without transparency, clear guidelines to which users can refer, or appropriate mechanisms for appeal. WSIS stakeholders must take steps to address this accountability gap.

Recently, Vodafone—a telecommunications company based in the United Kingdom—announced its planned partnership with the government of Iran. This partnership will likely result in major improvements to Iran's existing telecommunications infrastructure, facilitating greater connectivity. However, concerns remain that Vodafone's activities in Iran will facilitate the ongoing censorship regime by abetting the infrastructural system of surveillance already in place. With little transparency, how can we consider the potential impacts of Vodafone and other private actors on the rights of users?

All WSIS stakeholders should recognize the 2011 UN Guiding Principles on Business and Human Rights (UNGPs). The UNGPs reaffirm states' responsibilities to protect human rights and to ensure access to effective remedy according to existing human rights obligations. However, the UNGPs also formally recognize the *corporate* responsibility to respect human rights, using the human rights framework to establish rigorous benchmarks. The UNGPs are designed to engender a process of due diligence within the private sector. As the first step in this process, private actors should develop and implement human rights impact assessments that systematically identify any adverse impacts of their policies and practices on human rights.

It is clear that the consideration of human rights is essential to ensuring inclusiveness and access to information and knowledge, and ultimately to ensuring the sustainability of economic and social development. Yet, the discussions of the WSIS Forum have yet to truly engage the UDHR and the international human rights framework as part of these efforts. The policy points above are not exhaustive. Corporate interests throttle fair use and other forms of expression under the pretense of innovation; states seek to stifle any online service that threatens to disrupt their hold over the market. But the brash

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

vision for a free and open Internet persists. As the information society looks forward to WSIS 2025 and the future of the Internet, it cannot lose focus of what exists at the core of this vision.

Uganda

H.E. Mr. Frank Tumwebaze Kagyigyi, Minister, Ministry of ICT and National Guidance

The Secretary General of the ITU, Mr. Houlin Zhao,
Mr. Chairman,
Your Excellences Honorable Ministers,
Distinguished delegates,
Ladies and Gentlemen

It gives me great pleasure to participate in the World Summit on the Information Society (WSIS 2017) forum and present this Policy Statement to you distinguished delegates. On behalf of the Government and People of Uganda, I congratulate the International Telecommunications Union and its partners for organizing this very important forum. This forum is particularly important for the world as it enables stakeholders discuss and identify ways in which the Sustainable Development Goals (SDGs) and targets can be achieved through leveraging on ICTs.

Mr. Chairman, the Government of Uganda has placed ICTs as one of the key drivers for the country's growth and development because it realizes the immense benefits and opportunities that ICTs create for the economy and its citizens. ICTs therefore form an integral part of the Country's development agenda.

Ladies and Gentlemen, through partnership with the private sector, Uganda has made great strides in extending ICT services all over the country. As of 2016, the country had achieved 100% area coverage for radio broadcasting services while voice telephony stood at 85% at sub county level. With regard to usage, penetration of voice telephony and internet stands at 63.4% and 51.9% respectively, largely driven by the mobile revolution.

Distinguished delegates, Uganda aims at having 100% access and usage of ICTs in the medium term. We however, like any emerging economy, continue to grapple with gaps in critical areas like; ICT infrastructure; ICT skills and relevant content among others. It is for this reason that we value such high

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

level fora like WSIS that provide an opportunity to all stakeholders to dialogue, share experiences and identify new ways to address the challenges that we are experiencing back home with regard to promoting usage and access to ICTs.

Ladies and Gentlemen, in implementing Action line C2, that focuses on ICT Infrastructure, the Government of Uganda is extending the National Backbone Infrastructure to cover all districts in the Country including major institutions like local government offices, health centers and educational institutions. This government infrastructure is being put in place to augment the already existing private sector infrastructure networks. We have also ensured that we have in place a favorable policy and regulatory framework to further encourage private sector investment in ICT infrastructure. We are also encouraging the private sector to adopt innovative ways of deployment of infrastructure to achieve efficient use of resources. This has already borne fruit with the emergence of operators exclusively providing infrastructure as a service to other operators.

Distinguished delegates, Uganda has a young population with over 70% below the age of 35 years. We recognize that in order for them to realize the full benefits of ICTs, there is need to create awareness and build capacity of these young citizens. As such, we have integrated ICTs in our education system though embracing the use of ICTs in the delivery of the education curriculum. This is in line with addressing SDG 4, which calls for ensuring inclusive and equitable quality education for all and ensuring lifelong learning opportunities for all. The government has established the requisite infrastructure in secondary schools, teacher training institutions and universities. To date, over 90% of the public secondary schools, teacher training institutions and universities have ICT laboratories equipped with the necessary content. This program also includes a teacher re-tooling program where school teachers are equipped with the necessary skills to impart ICT skills and knowledge to their students. We are working with the private sector, civil society organizations and development partners to ensure that the ICT in Education program is rolled out to all schools and hence achieve better appreciation of ICTs.

Ladies and gentlemen, in order to further promote the uptake of ICT services, the Government of Uganda is emphasizing the creation of an innovation driven ICT sector. Several initiatives are underway that aim at promoting and supporting the development of local ICT systems and solutions. We have further embarked on promoting the development of relevant local content to facilitate integration of ICTs in the social and economic sectors of Uganda. We believe this will encourage local users to embrace ICTs. We welcome the participation of various partners from the private sector, civil society and development agencies in achieving this objective.

Ladies and Gentlemen, we continue to explore other opportunities that will enable us realize our vision of achieving universal access and usage of ICTs. To further address access gaps, the government has embarked on leveraging existing infrastructure like post offices to enable access to e-services, including

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

e-government services. The traditional post offices are being upgraded with internet connectivity to enable them accommodate one-stop Centres where the citizens can access all the available e-government services. In addition, we are encouraging the private sector to adopt other models of infrastructure deployment and sharing, especially in the underserved and unserved areas as means of reducing the cost of network roll outs. Similarly, we have further adopted coordinated planning and deployment of ICT infrastructure with other complimentary services like roads as well as utilities like water and electricity in unserved areas.

Mr Chairman, Your Excellences, Distinguished Delegates, Ladies and Gentlemen, as I conclude, it gives me great pleasure to inform you that Uganda has made great strides in advancing the WSIS Action lines. The Government of Uganda reiterates its Commitment towards furthering the implementation of WSIS Action lines using a multi-stakeholder and multi-dimensional approach. We commit to further ensuring that our policy and regulatory frameworks address emerging technological and industry trends so as to ensure that we bridge the digital divide. I thank the ITU for organizing this forum and the Government of Switzerland for hosting us. I look forward to interacting with other distinguished delegates and drawing lessons, sharing best practices and identifying emerging trends on various topical issues that we shall be discussing during this forum.

For God and My Country,

Hon. Frank Kagyigyi Tumwebaze

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION FIVE: Bridging Digital Divides

High-Level Track Facilitator (HLTF): Dr. Nitya Khemka, Affiliate Lecturer, University of Cambridge

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Mr. Yushi Torigoe, Deputy Director, Telecommunication Development Bureau
3. **Ethiopia** – H.E. Dr. Debretsion Gebremichael Measho, Minister, Ministry of Communication and Information Technology
4. **Mexico** – H.E. Edgar Olvera Jiménez, Vice Minister of Communications, Secretariat of Communications and Transportation
5. **Japan** – H.E. Mr. Shigeki Suzuki, Vice Minister for Policy Coordination, Ministry of Internal Affairs and Communications
6. **Russian Federation** – H.E. Mr. Rashid Ismailov, Deputy Minister, Ministry of Telecom and Mass Communications of the Russian Federation
7. **Costa Rica** – Mr. Jaime Herrera, Member of the Board, Superintendencia de Telecomunicaciones (SUTEL)
8. **Pakistan** – Dr. Syed Ismail Shah, Chairman, Pakistan Telecommunication Authority (PTA)
9. **Portugal** – Ms Fátima Barros, Chair of ANACOM's Board of Directors, ICP - Autoridade Nacional de Comunicações (ANACOM)
10. **International Chamber of Commerce (AT&T)** – Mr. Virat Bhatia, Vice-Chair, Commission on the Digital Economy (France)
11. **Internet Society** – Ms. Constance Bommelaer, Senior Director of Global Internet Policy (Switzerland)

Introduction:

- The digital divide continues to remain a critical challenge.
- There are gaps in access and usage of ICT due to lack of infrastructure, affordability, adoption rates, awareness and relevant content.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Vision

- The digital divide is a problem not only of access to technology but also a serious social issue that has several interconnections with poverty and social deprivation.
- A holistic approach needs to be adopted to overcome the digital divide that is based on infrastructure development, good governance, capacity building and strong local communities that can support the ecosystem.

Fresh Priorities

- Building the next generation of ICT infrastructure and reducing cost of access.
- Improving broadband connectivity/ bandwidth especially in rural communities.
- The government can play an important role in providing the necessary enabling environment to facilitate competition amongst private players, to incent private sector to invest and to deploy resources in cases of market failure.
- Integrating breakthrough technologies into everyday life including healthcare, governance, education and smart cities.
- Human resources- skilling people and improving digital literacy so that they are able to take advantage of the internet.

Emerging trends

- Emergence of local access solutions such as community networks as a critical element in expanding internet access.
- A blended approach to leapfrog into greater digital access and adoption using a combination of government initiative, private sector investment/ competition, and cutting edge technology.

Opportunities

- Lack of access to connectivity is closely linked to poverty and hence the digital divide cannot be treated in a silo but has to be linked to anti-poverty and education programmes to improve digital literacy.
- In remote areas with low population densities where there is no business case for the private sector, the government needs to step in and ensure the development of infrastructure and connectivity through Public/Private partnerships that are open access.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Key Challenges

- Making sure that the connectivity is utilized in a way that adds value and can impact the economic/social status of the people using it.
- Ensuring there is enough local content and affordability of connectivity.
- Translating the success of cell phone penetration into improving internet access.
- Need to identify and overcome different types of digital divides caused by barriers due to affordability, efficacy, skill-levels, disability and gender.
- Challenges in rate of adoption of new technologies especially in areas with elderly populations with low digital literacy.

Link with the WSIS Action Lines and Sustainable Development Goals (SDGs)

- If we want to ensure universal access to the internet by 2030, we will require new approaches to ensure no one is left behind.
- In order to fully embrace the potential of ICTs to achieve the SDGs, countries must adopt a holistic approach in fields such as health, education and the environment.

Case Examples

- ITU's interactive terrestrial transmission labs that are a cutting edge ICT data mapping platform to highlight missing links in transmission.
- Mexico has amended its constitution to ensure that equitable access to ICTs is a human right.
- Japan has developed movable and deployable ICT resource units that can quickly provide connectivity in areas where there is low population density and in times of natural disasters.
- The e-library in Russia which is a free, open-access platform that pulls together resources from libraries all over Russia on to a single platform.
- The Government of India is doing several things under its Digital India programme including biometric access, smart cities and direct benefit transfers to improve access to the most vulnerable communities.
- Pakistan has a separate provision in its IT policy document that examines issues relating to bridging the digital divide for people with disabilities.
- Costa Rica has a fund financed out of resources from the spectrum assigned to the telecom and internet operators to ensure equity in digital access for the country.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Road ahead

- ITU has developed master plans for broadband networks for eight countries for high speed transmission of voice, video and data.
- Large scale infrastructure projects undertaken by the EU that can host electronic communications networks like roads, utilities and fiber optic networks.
- Report by Internet Society that maps community networks across Africa and identifies various initiatives to bridge the divide in the region.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Japan

H.E. Mr. Shigeki Suzuki, Vice Minister for Policy Coordination, Ministry of Internal Affairs and Communications

What is the best way to address “bridging digital divides” in a way that allows us to achieve SDGs?

- Asian Development Bank report says that Developing Asia needs an investment of 2.3 trillion US dollars in telecommunications for 15 years from 2016 to 2030, to maintain its growth momentum.
 - To secure this huge investment, investment from the private sector is the essential.
 - The role of the Government is to show the national ICT infrastructure development goal and plan, and to disseminate it to related stakeholders, make policy and regulations to encourage investment and competition, and build an environment that enables private sectors to invest actively.
 - Especially in the case of ICT infrastructure in non-profitable areas, low population density areas, it is necessary to use some public assistance and appropriate technologies to those areas, in a technology-neutral approach, such as fixed wireless, satellites and mobile network. TV white space frequency, multi-hop wireless technology.
- <Various initiatives tailored to each country>*
- In Japan, under free competition, telecom carriers and cable broadcasters develop network infrastructure.
 - In non-profitable for low population density areas, the government or local municipality assists private sectors, or build infrastructure by local government itself.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- At the same time, we developed a specially equipped unit known as MDRU (Movable and Deployable ICT Resource Unit), which can quickly restore telecommunications capabilities in disaster-affected areas. Even in normal times, it is very useful in rural area.
- Experimental implementation of using TV white space frequency in collaboration with Indonesia and the Philippines.
- Proving test of multi-hop wireless technology in collaboration with Cambodia.
- Pilot project in Nepal to provide wireless Internet access to schools and medical clinics in mountainous regions.

When we address “bridging digital divides”, what should we consider for sustainable growth of the Digital Economy and Society?

- For sustainable growth, we need to consider the long time perspective as well as geographical perspective of a covered area.
- From a long-term perspective, it is important we find the way to reduce Life Cycle Cost over 10 to 20 years, not only focusing on initial cost.
- Based on this long-term point of view, we Japan propose the concept named “Quality Infrastructure Investment”.
- This concept includes not only developing ICT infrastructure, but also appropriate training and support for the operation and maintenance for local people, capacity building, and technological transfer. These activities can create new employment opportunities in developing countries.
- The important thing is to consider every required item for sustainable growth, as an all-inclusive package including financing mechanisms.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Russian Federation

H.E. Mr. Rashid Ismailov, Deputy Minister, Ministry of Telecom and Mass Communications of the Russian Federation

Your Excellencies!
Dear colleagues and guests!

The December 2015 WSIS ones more highlighted that the digital divide in terms of gender, geographical and age criteria, and also based on income and for persons with special needs still has significant level, including both in countries and between countries.

Bridging the digital divide is closely related to sustainable development goals concerning infrastructure development, improvement of education and healthcare, capacity building, keeping and developing cultural heritage in all its country, religious and language diversity, and also concerning ICT use to eliminate poverty, combat the negative impact of climate change and assist in emergency situations.

57% of world population have no Internet access and cannot use huge economic and social benefits, which could be provided. The ITU initiative “Connect 2020” aimed at bridging this divide. Its goals and objectives are directly associated with the broadband development and implementation of one of SDG targets: significantly increase access to information and communications technology and strive to provide universal and affordable access to the Internet in least developed countries by 2020.

Nowadays Russia undergoes a technological revolution: almost 70% of the population uses Internet, 40 million of citizens are registered on the Unified Portal for State and Municipal Services, a half of population use smartphones.

Information technologies are provided through establishment of corresponding infrastructure, creation of digital content and preparedness of users, and this undoubtedly facilitates creation of conditions for improving education, medical service, social protection of population on a basis of development and use of information technologies that help real reduction of digital divide.

Our strategic goals in terms of ICTs coincide with the sustainable development targets set by the UN, and Russia is quite successful in implementing its own plan to increase the availability of broadband services. At the same time, we should consider huge territory of our country, its geographic and climatic conditions. Despite this, Russian mobile access to broadband services is one of the cheapest in the world. In small settlements with a population of 250 residents and more, subscribers pay only \$0.7 per month for the access to the Internet at 10 Mbit/s. This well represents affordability of services in Russia compared to other countries of the world.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Russian Ministry of Communications set ambitious goals: to achieve the availability of broadband services up to 97% for the whole country's population and to reach 70% of citizens using mechanism of obtaining state and municipal e-services, by 2018.

"Digital Economy in the Russian Federation" programme has been just finalized providing measures to establish legal, technical, organizational and financial conditions needed for the development of digital economy in the Russian Federation that would help efficiency of all sectors of the national economy with the assistance of ICTs, and establish at least 10 national champion companies being high-tech enterprises developing "end-to-end" technologies and managing digital platforms that operate in the global market and form a system of startups, research teams and industry-oriented companies around themselves.

We see establishing a favourable investment climate, reducing administrative barriers, encouraging small and medium-sized businesses, development of existing broadband Internet infrastructure and e-trade as the key issues of the digital economy development.

We are confident that implementation of the "Digital economy in the Russian Federation" Programme would allow establishing favourable environment for the development of the knowledge society, raising awareness of the population about new ICT opportunities, improving system of ICT skills education and update, thereby reducing risks when only a part of the population have access to up-to-date technologies, can use them and benefit from them. We believe that education, updating skills and advertising of new "information-driven" lifestyle, that involve larger segments of the population in the ICTs, aimed to play a major role in the development of the knowledge society.

Changes in the field of ICTs have a direct impact on the improvement of living standards of our citizens as well as on better quality of the services delivered by the State. We now see how the world changes around us and how borders disappear with the help of ICTs.

Development of ICTs, similar to the introduction of any other new technology, could not on itself level the opportunities for the populations of the developed and developing countries and in some cases even exacerbates the divide. We believe that crucial elements for bridging the digital divide should be international cooperation at the global and regional levels, increased investments and expanded relevant financing.

Russia is actively involved in the activity of UN system organizations, first and foremost of the ITU and UNESCO in the framework of the WSIS process and the 2030 Agenda for Sustainable Development. We have developed and are developing collaborative programmes with CIS and BRICS countries and in the frameworks of bilateral and multilateral relations aimed at bridging the digital divide in the interests of the national community as a whole. Only working together, we can resolve this challenge and ensure the implementation of the Sustainable Development Goals.

I wish all participants success, and new constructive decisions and ideas!
Thank you for your attention.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Costa Rica

Mr. Jaime Herrera, Member of the Board, Superintendencia de Telecomunicaciones (SUTEL)

ESTRATEGIA PARA EL CIERRE DE LA BRECHA DIGITAL EN COSTA RICA

OBJETIVO

Mostrar la estrategia que se sigue en Costa Rica, para cerrar la brecha digital en los territorios rurales, de difícil acceso o territorios indígenas, con poblaciones marginadas y/o de bajos ingresos.

CONTENIDO

- 1- Entorno del mercado de telecomunicaciones de Costa Rica
- 2- SUTEL – órgano regulador
- 3- Funciones de SUTEL
- 4- Estrategia de cierre de la brecha digital
- 5- Cinco programas integrados
- 6- ¿Qué sigue?

ENTORNO DEL MERCADO DE TELECOMUNICACIONES DE COSTA RICA

Como en todo país, hay diferentes participantes en el mercado de las telecomunicaciones de Costa Rica. Los principales son:

- 1- MICITT: Ministerio de Ciencia, Tecnología y Telecomunicaciones. Es el rector de las telecomunicaciones del Gobierno de Costa Rica. El deseo del Gobierno en cómo desarrollar el sector en el país queda plasmado en el PLAN NACIONAL DE DESARROLLO DE LAS TELECOMUNICACIONES (PNDT).
- 2- SUTEL, organismo independiente que tiene las funciones de regular el desarrollo del mercado de las telecomunicaciones en Costa Rica

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

3- OPERADORES PRESTADORES DE LOS SERVICIOS: Son las entidades encargadas de proveer los servicios de telecomunicaciones en un mercado en libre competencia, regulado por la SUTEL. Los más conocidos son Kolbi (ICE), Movistar, Claro, Tuyo Móvil, Full Móvil, pero existen más de 150 operadores con licencia para brindar sus servicios

4- USUARIOS, clientes de los operadores y fin último de SUTEL ya que su principal objetivo es proteger y beneficiar a los usuarios, para el desarrollo armonioso, accesible y de calidad al menor precio posible.

SUTEL – Órgano Regulador

Una institución anexa a la ARESEP, que es la Autoridad Reguladora de los Servicios

Públicos de Costa Rica. SUTEL es la autoridad reguladora del Sector de Telecomunicaciones, totalmente independiente de todos los operadores y proveedores de servicios.

La ley general de telecomunicaciones le ha otorgado a la SUTEL las siguientes funciones

1. Velar por los mayores beneficios para el usuario final de los servicios de telecomunicaciones
2. Asegurar una eficiente y eficaz administración del espectro radiológico
3. Asegurar los principios de universalidad y solidaridad en los servicios de telecomunicaciones
4. Promover la competencia en los mercados de telecomunicaciones
5. Fijar las tarifas para los servicios de telecomunicaciones

FONATEL – FONDO NACIONAL DE TELECOMUNICACIONES

Dentro de la estrategia de desarrollo de las telecomunicaciones de Costa Rica, la ley estableció el mencionado FONATEL, Fondo Nacional de Telecomunicaciones y le encargo a la SUTEL como órgano independiente, la administración de este fondo y la ejecución de los proyectos destinados al cierre de la brecha digital, evitando tener dos Costa Ricas, la conectada y la no-conectada.

La ley establece que el fondo se alimenta monetariamente de las concesiones del espectro radioeléctrico, de un impuesto especial del 1,5% del ingreso total de cada operador, y de las donaciones y transferencias que le puedan hacer.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Como objetivos del fondo están:

1- Promover el acceso a los servicios de telecomunicaciones a tiempo, eficientemente y de manera asequible para:

PREMIO

UIT

-Para los habitantes de zonas remotas (áreas donde la provisión del servicio no es rentable).

-Personas que no pueden pagar por los servicios.

-Individuos en condiciones vulnerables (población indígena, niños y adultos mayores, entre otros).

-Instituciones públicas (MEP, CCSS, CENCINAI y CECIS)

2- Reducir la brecha digital y asegurar las mismas oportunidades a toda la población de Costa Rica.

3- Promover la conectividad, el desarrollo de la infraestructura y la disponibilidad de terminales y servicios de banda ancha.

Cinco programas están siendo ejecutados por SUTEL.

CINCO PROGRAMAS EN EJECUCIÓN:

PROGRAMA No. 1: COMUNIDADES CONECTADAS

Consiste en la construcción de la infraestructura necesaria para proveer servicios de internet y telefonía en las zonas alejadas, donde los operadores comerciales no llegan pues no es negocio para ellos. El fondo provee una subvención para que se construya la infraestructura necesaria y se den las facilidades a escuelas, colegios, sitios públicos importantes como los centros de salud EBAIS, los CECIS que dan acceso a internet al público, los CENCINAI y Centros de Salud. Los operadores dan el servicio al público en general cobrando los servicios. Cuando el proyecto crece y se hace autosuficiente comercialmente, el fondo les quita la subvención.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Actualmente hay 34 proyectos ejecutados, varios de ellos ya sin subvención, con una población de más de un millón de beneficiados y una inversión que asciende a 150 millones de dólares de los Estados Unidos.

PROGRAMA No. 2: HOGARES CONECTADOS

Este programa está dirigido a los hogares de bajos recursos que no pueden pagar los servicios de internet ni adquirir los equipos terminales, ubicados en todo el país por lo que no va dirigido a zonas geográficas. Las familias no las escoge la SUTEL sino que son las de los quintiles más bajos que se ubican en la base de datos del IMAS (Instituto Mixto de Ayuda Social) del Gobierno Central.

Con este programa se les suministra a estas familias de escasos recursos, internet fijo, computadoras y contenidos digitales subvencionados. Hay 140.000 familias beneficiadas con una inversión de 128 millones de dólares de los Estados Unidos.

ESTE PROGRAMA HA SIDO PREMIDADO POR LA UIT.

PROGRAMA No. 3: CENTROS PÚBLICOS CONECTADOS.

Hay muchas escuelas de educación primaria y/o secundaria o centros públicos como los ya citados, que a pesar de que se les dé la conectividad de internet, no tienen las computadoras, impresoras y otros equipos terminales.

Este programa les provee las computadoras para las escuelas públicas de primaria y secundaria, a los CECIS, CENCINAIs, y Centros de Salud. Tiene una inversión de 20 millones de dólares de los Estados Unidos.

PROGRAMA No. 4: ESPACIOS PÚBLICOS CONECTADOS:

Se pretende tener una red de espacios públicos conectados con acceso a internet gratis. El programa busca cubrir espacios públicos donde hay aglomeración de personas, como los parques, las estaciones de ferrocarriles y buses de transporte público, plazas, bibliotecas públicas y otros.

Se espera tener 240 puntos de conexión en 177 comunidades beneficiadas, en su primera etapa, con una inversión de 20 millones de dólares de los Estados Unidos.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

PROGRAMA No. 5: RED DE BANDA ANCHA SOLIDARIA

Esta sería una red de banda ancha solidaria que atravesaría todo el país y daría conectividad a todos los puntos de los cuatros programas antes mencionados, en todas las zonas rurales.

El programa actualmente está en formulación y diseño, lo cual se hará durante el año 2017, para iniciar las licitaciones, adjudicaciones y construcción a partir del año 2018.

¿QUÉ SIGUE?

Como puede verse, los cinco programas son complementarios unos con los otros y con gran efectividad están ayudando a cerrar la brecha digital en Costa Rica.

A pesar de que FONATEL tiene comprometido casi todo su capital para los próximos años, el fondo crece todos los años. Este año en particular el país subaste una serie de frecuencias, y el producto de la subasta, por ley va íntegramente al fondo. Además, todos los años se recibe el 1,5% de las entradas brutas de todos los operadores licenciados para brindar sus servicios en el país.

Por tanto, y para cumplir con las obligaciones que le da la ley, se requieren nuevos proyectos, y para diseñar nuevos proyectos, se requieren nuevas ideas.

Nuestra participación en esta Cumbre Mundial de la Sociedad de la Información tiene como uno de sus objetivos el intercambio de experiencias para encontrar esas nuevas ideas aplicables en nuestro país

MUCHAS GRACIAS A LA UIT POR INVITARNOS Y DARNOS ESTA OPORTUNIDAD

Ing. Jaime Herrera

Miembro del Consejo de SUTEL.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Portugal

Ms. Fátima Barros, Chairperson of the Board, ICP - Autoridade Nacional de Comunicações (ANACOM)

Portugal is a successful case study regarding Next-Generation Access networks, as it ranks in 1st position in FTTP coverage and in the 5th position in Next Generation Access Networks in Europe⁵.

This was made possible through a set of regulatory and legislative measures focussing on eliminating barriers to the rollout of infrastructure for telecommunications, therefore effectively reducing investment costs in broadband networks. In fact, the regulatory authority – ANACOM - put in place the following initiatives:

- imposing asymmetric access to ducts and poles of the incumbent operator;
- elimination of barriers to the rollout of the infrastructures for telecommunications in buildings and concentrations of buildings, allowing consumers to easily churn their service provider.

Furthermore, the Government also imposed compulsory access to ducts and poles owned by other utilities — electricity and gas companies, water and waste companies, highway operators and railway operators as well as municipalities in the country.

In addition, in order to bridge the digital divide in rural and less dense areas where there is no commercial attractiveness, there were initiatives of public-private investments in open access dark fibre networks to ensure that population in these areas could have access to very high speed networks.

⁵ Source: European Commission, Broadband coverage in Europe, 2016

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The dynamics of competition in the domestic market were also very important. This was a driver for significant investment in broadband networks, generating effective competition at the infrastructure level. Currently more than 35% of households can choose services from at least three fixed network operators.

In spite of these policies and extraordinary NGN coverage, there is a significant digital divide in our society and territory. Specific digital literacy initiatives are being put forward targeting social and age groups with low or no digital competences, as well as capacity building to increase the safe usage of the Internet and improving accessibility and usability. The overall goal is to lower to 23% the percentage of individuals that have never used the Internet, and to 35% the percentage of individuals with low or no digital expertise by 2020.

Trust in ICT utilization is also a key factor to bridge the digital divide. Personal data, privacy and security features must be built-in in any device and service. This requires active, collaborative participation from all stakeholders. Hence, political coordination is the umbrella under which all other activities can develop. The ITU will remain a key organization in this field and Portugal is fully committed to work in partnership with the ITU and other UN agencies on the global effort to bridge the digital divide.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Internet Society (ISOC)

Ms. Constance Bommelaer, Senior Director of Global Internet Policy

“Support your local heroes”

The WSIS +10 Review made explicit the link between the WSIS process and the 2030 Agenda. A link that highlights the unprecedented ability for information technology to support human progress, and to reduce the world’s geographic and social barriers. A link that clearly demonstrates that connectivity enables socio-economic development.

The Sustainable Development Agenda and the Sustainable Development Goals focus on change and action. They recognize multi-stakeholder solutions. At the Internet Society - we strongly believe that **everyone** has a role to play in the implementation of these objectives. For example, the ITU through its membership and mandate has a leading role to play in examining key barriers to connectivity and together from local to global levels to find the solutions to overcome them. With partners - we can amplify change.

But change will not happen if we look to the past. We must look forward. We must take risks. To achieve the Sustainable Development Goals and connect the next billion business as usual won't work.

We know that the answer is that we need to do things differently, and to take our lessons from the core ingredients: A bottom-up approach and collaborative exchanges that have allowed the Internet to flourish in so many parts of the world.

None of us here this week, whether we are from government, the private sector, or from an NGO, can ever achieve our ambitions to support sustainable development if we try to do it alone. We can only do this through collective efforts, and **by supporting more local connectivity solutions** and access to information, markets, healthcare, and opportunities. We must recognize that the success of the Internet is inherently linked to **building the capacity** of those it connects. And, without connectivity, communities are disconnected.

We need to connect unserved and under-served communities.

Part of change we need to see is to make it possible for people to connect themselves through local solutions. Solutions like Community Networks, where anyone, anywhere - regardless of background - can

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

connect as long as they have the right tools and support. Regular people - local champions - local heroes - who do not think twice about what they are doing. Let's be inspired by these everyday heroes. People dedicate themselves to local connectivity. And, they work from within communities to build connectivity. They are part of a bigger connectivity puzzle, and they are a compliment to other efforts under way to connect people.

So where do we start? What can we do to promote local connectivity solutions - to support community networks?

The answer lies in partnerships. Support your local heroes who are developing these local connectivity solutions. Understand their needs. Because they need your support and they are part of your solution to connect more of your citizens, to enable social and economic growth and to enable opportunities.

For example:

- **If you are a regulator, consider** Community Networks as a legitimate alternative form of local connectivity. Recognize them as a sustainable means to connect people "from the village out". Where local people build, develop, and manage a community network, where many traditional networks do not reach. And, where sustainable development is strong as the community network has been developed By, For, and, With the Community.
- **If you are a policy maker,** consider ways that existing or new funding programs can support Community Networks, and make sure that they are recognized as a solution to your ambitions to develop an information society with more digitally literate citizens and future innovators - who can support economic and social progress. They are a partner for your development ambitions.
- **If you are from the operator community,** consider partnering with local community networks. See them as a complimentary means to empower the unconnected to connect, and consider what you can do to support their development through equipment donations, training opportunities, or through back-haul provision to reach the global Internet.

All of us need to take inspiration from these everyday heroes who are building connectivity by, for, and with local communities, because development, innovation and solutions are always local.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION SIX: Knowledge Societies, Capacity Building and e-Learning

High-Level Track Facilitator (HLTF): Ms Jessica Dheere, CO-Founder and CO-Director, Social Media Exchange (SMEX)

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Dr. Cosmas Zavazava, Chief of Department, Projects & Knowledge Management, Telecommunication Development Bureau
3. **Djibouti** – H.E. Mr. Abdi Youssouf Sougueh, Minister, Ministry of Communications, Posts & Telecommunications
4. **Kenya** – Mr. Samuel Itemere, Principal Secretary, Broadcasting & Telecommunications, Ministry of Information, Communication and Technology
5. **India** - Mr. Sanjay Kumar Rakesh, Joint Secretary, Ministry of Electronics & Information Technology
6. **Association of Scientists, Developers and Faculties** – Dr. Kokula Krishna Hari Kunasekaran, International Secretary (India (Republic of))
7. **Wiley Rein LLP** - Mr. Richard Beaird, Consultant

Introduction

- Building strong knowledge societies depends on multiple factors, including physical infrastructure, development of applications that enable use of that infrastructure, and development of skill sets to be able to use the applications and produce digital dividends
- E-learning is part of a broader knowledge ecosystem and touches on other sectors, such as e-health, agriculture
- Regulatory frameworks are changing to embrace e-learning to promote both traditional and digital literacy
- Modes of learning have changed

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- The environment for e-learning have common characteristics, such as needing to maintain a free flow of information; that e-learning processes should stimulate openness, and transparency; to emphasize private public sector cooperation; to develop entrepreneurial skills/apprentice programs; the use of e-learning as a tool in overcoming gender digital divide.

Vision/Fresh Priorities

- To build a knowledge society we need to make it free from fear of change and work with people to understand their issues, to impact their lives
- Build networks of networks, such as among universities
- Building knowledge societies should incorporate a global (rather than solely national) perspectives and void promoting “volatile individualism” that leads to silos of knowledge/action that are digitally connected but physically or socially separated

Opportunities/Partnerships

- Emerging technologies, such as Big Data, Internet of Things, Artificial Intelligence are new platforms that can be leveraged to embrace capacity building and e-learning and so some attention can be paid to developing the skill sets to leverage these technologies
- Mass-adopted technologies like mobiles have helped expand numero-literacy and English literacy even among rural, less literate populations, so targeting digital literacy for capacity building also helps overcome traditional literacy handicaps
- Develop and provide continuous learning opportunities for those responsible for building others’ digital capacity
- Partnerships among governments, academia, public and private sector are essential to build knowledge societies, including new e-learning opportunities
- Partnerships with universities are among the most well-known; they are key producers of learning content
- Joint ventures by multiple countries can promote cooperation/partnership, for example, on the SDGs

Key challenges

- Lack of physical infrastructure in some places

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Increasingly lack of traditional or digital literacy and necessary digital skill sets among women, rural, poor, elderly, people even where physical infrastructure exists, meaning that they are not able to convert ICT resources to yield digital dividends
- Fear of using digital technologies
- Lack of digital capacity among those responsible for educating others (teachers, trainers, municipal officers, etc.)
- Developing new, high-quality e-learning content is costly in terms of time and money

Case Examples

- ITU launched a project on using ICTs to combat Ebola in West Africa to educate people to learn about how the health sector copes with such epidemics. The project embraced Big Data to trace core data records. Can use similar approaches for agriculture, environment.
- ITU Academy as an online learning platform with knowledge on radiocommunication, the standardization bureau, and the development sector that trains thousands of people a year, in partnerships with more than 150 universities and just launched a master's degree in management communication management as well as setting up 32 centers of excellence across the globe.
- A large-scale program in India proposes to train 600 million people in the next three years on digital literacy.
- India provides online education through online courses called MOOCs (massively open online courses) to which anybody can go, learn, and earn a degree.
- The Association of Scientists, Developers and Faculties in India is creating a knowledge platform for patents, research publications, etc., in an effort to build a “think-tank society” and address some challenges presented by language diversity.
- To bridge the digital divide, Djibouti, has developed in 2013 a strategy that integrates ICTs and restructures the framework to make it feasible in the midterm to meet the need to bridge the digital divide. Djibouti Digital aims to make our country an ICT center within the region, building on the country’s geo strategy and the submarine cables that go across the country.

Road Ahead

- Must optimize learning processes based on information made available by new technology-- Internet search, libraries, flipped classrooms that spend more time on discussion and debate than

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- on rote memorization or recitation, encourage critical investigation and evaluation of information-
-including within schools
- Emphasize best practices for building knowledge societies based on aggregated experiences that can be shared in diverse environments and economies
 - Smart Cities or whole variety of smart environments can be thought of as centers of excellence and/or incubators, where innovation is encouraged and new ideas to help the society as a whole can be generated; and they should be connected to each other to learn from each other's experiences

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Association of Scientists, Developers and Faculties
Dr. Kokula Krishna Hari Kunasekaran, International Secretary

Your Excellencies, Honourable Ministers, The Secretary General of UN, The Secretary-General of the ITU, Distinguished delegates, Ladies and Gentleman. In a wider capacity as the Secretary General of The ASDF International, I am highly privileged to address at this event and to have an opportunity to bring ASDF inline to achieve the United Nations Sustainable Development Goals.

The Association of Scientists, Developers and Faculties (ASDF) is doing a massive job in creating a strong community of knowledge growth by providing the International platform for various Professional associations between Countries across the world. With a strong network of associates in almost 90+ countries, ASDF is growing everyday with seer leadership by enhancing the international cooperation between national and international organizations, universities, research bodies and individuals in all aspects of Research and Development.

Making a place holder with the advanced ICT had been as an important task for The Association of Scientists, Developers and Faculties in the past few years of its inception. The establishment has now grown into the well sustained organization with perfect internationalization is the victory achieved.

In this wide intellectual platform, I would like to extend my invitation to foster the socio-economic growth by all the Governmental Organizations and be as a part of ASDF. As a part of this upcoming strategy ASDF stands committed by making contribution in building the relationship between the equal valued bodies creating the framework and a strong expertise in measuring the progress along the WSIS action lines. The digital economy is a powerful catalyst for innovation, growth and social prosperity. The libraries have shrunk into a 3-kilogram book. It can serve our shared vision to promote more sustainable and inclusive growth focused on well-being and equality of opportunities, where people are empowered with education, skills and values, and enjoy trust and confidence.

The knowledge building is the important task and need for the hour. The cost of use of energy in the end user level is increasing widely creating a new metabolic activity. In the present trend, the information pandemic can be a vital threat, but educating the society about handling the data could be the righteous way.

The concept of virtualisation has now taken the floor and automation is being performed instead of relying on the human mechanisms. Thus, it has led to the digitally connected cars, provenance,

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

personalization of the content attributions, constant attention, increased flexibility of learning pattern, premiumisation and polarisation of the opportunity.

These days the individualism is growing worse than cancer which in turn increases the volatility of their growth scope. This is widening the gap between the haves and have nots. They don't share or transfer the knowledge. The uncertainty is expanding in all the possible means, and the key answer for this would be allowing the open access or providing the eLearning. The capacity building programs could cost the Governments a lot, but having the open access in the education system and advanced learning could be much better and convincingly cheaper than the conventional programs.

Mr Chairman,

In the outset of providing space for the other speakers, I would like to reiterate that we at The Association of Scientists, Developers and Faculties (ASDF) take this opportunity to thank all the Member States and Stake Holders for their efforts towards finalisation of the Outcome Document to be adopted by this high-level discussion of WSIS 2017 and recommit for future participation from ASDF into this WSIS.

I Thank you, Mr Chairman!

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION SEVEN: Bridging Digital Divides

High-Level Track Facilitator (HLTF): Dr. Habib Kammoun, Chairperson of the IEEE Tunisia Section & leader in the REGIM-Lab. (Research Groups in Intelligent Machines), University of Sfax

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Mr. Reinhard Scholl, Deputy Director, Telecommunication Standardization Bureau
3. **Iran (Islamic Republic of)** – H.E. Mr. Mahmoud Vaezi, Minister, Ministry of Information & Communication Technology
4. **Timor-Leste (Democratic Republic of)** – H.E. Mr. Gastão de Sousa, Minister, Ministry of Public Works, Transport and Communications (MOPTC)
5. **Uganda** – H.E. Mr. Frank Tumwebaze Kagyigyi, Minister, Ministry of ICT and National Guidance
6. **Viet Nam (Socialist Republic of)** – H.E. Mr. Phan Tam, Deputy Minister, Ministry of Information and Communications (MIC)
7. **Mexico** – Mrs. Adriana Sofía Labardini Inzunza, Commissioner, Instituto Federal de Telecomunicaciones (IFETEL)
8. **Moldova** – Mr. Grigore Varanita, Director, National Regulatory Agency for Electronic Communications and Information Technology (ANRCETI)
9. **50 More Ventures** – Mrs. Maya Plentz Fagundes, Executive Director (Switzerland)

Introduction

- Speakers presented their efforts to bridge the digital divide and their future plan.
- It was clear that digital divide remains a critical issue due to problems of infrastructure, affordability, skills, awareness and relevant content. These problems should be addressed rapidly in order to avoid the grow of digital divide.
- Clear unequal access to broadband opportunities between big cities and rural areas
- Bridging the digital divide is more challenging in the broadband era and especially when we are moving towards the digital economy

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Vision

Through introducing useful services in addition to providing broadband connectivity, and empower residents by providing them everywhere with a wide range of application and information methods.

Fresh Priorities

The priorities identified in the session included:

- Policy interventions should be designed and deployed, especially in rural areas
- Increase the investment in ICT and open data projects
- Improve the Internet infrastructure in rural areas
- Improve skills and work on capacity building in rural communities to address the digital divide.

Emerging trends

The emerging trends identified in the session included:

- Identification of recent innovations to help bridge the digital divide in certain countries
- Facilitate and encourage international cooperation in all matters related to the ICT
- Right of access to data and information, since the digital economy requires data collection and data generation everywhere

Opportunities

Opportunities that were identified in the session include:

- Diversify and improve the quality of services
- Establish data analytics everywhere and data service availability everywhere

Key Challenges

The key challenges to deal with the digital divide included:

- Investing in and building the infrastructure, reducing costs
- Develop services for rural communities, giving them the necessary digital skills to use the Internet in a useful manner
- Develop solid and secure high-speed and nationwide broadband
- Tackling barriers to competition
- Needs of mobile affordable smartphones
- Creating tools that empower consumers to compare prices, plans, and services

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Lack of experience with the private and the local authorities

Link with the WSIS Action Lines and Sustainable Development Goals (SDGs)

There are clear links to the WSIS Action Lines and the SDGs through this panel, especially building communities and building out broadband infrastructure.

Case Examples

Examples were identified in the session are:

- Iran provides broadband services to close to 28,000 villages and FTX connections to residential and business customers in metropolitan areas. Iran also created more than 100,000 ICT related jobs by actively supporting startups, R&D projects, and innovation by way of providing grants and low interest loans
- Uganda has invested close to \$100 million to put in place the national backbone infrastructure that connects all government installations both in the urban and rural areas. Uganda also established the universal service fund and equipped all laboratories and secondary schools
- Vitenam fosters the broadband deployment through encouraging investment framework and creates environment favourable for innovation and for entrepreneurship
- Mexico has dropped the prices of mobile services over 40% in three years, which has increased traffic and increased the number of subscriptions. Mexico also put in place an innovative open access called the wholesale shared network that covers 92.2% of the population
- Moldova set targets of at least 60% of households connected with high-speed access technologies over 30 megabits
- 50 More Ventures worked with startups in developing area. They engaged and educated young women to become active creators of content and of uses of technology

Road ahead

The panel identified:

- Need to promote partnerships
- Need to develop new technologies, new applications, and new services
- Need to support local ICT innovators and companies by putting up universal hubs, and linking them with other mentors, and the multinational companies of this world
- The broadband must be used as a powerful tool for online learning and for lifelong learning

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- The government has to have new economic resources through the system which equips its people with lifelong learning capabilities and the ability to innovate for themselves in the fast moving digital world

Even though there are challenges, there is a very positive vision for the future and that by working together to achieve the Sustainable Development Goals.

Thank you very much.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Iran

H.E. Mr Mahmoud Vaezi, Minister, Ministry of Information & Communication Technology

In the Name of God, Most Compassionate, Most Merciful

Mr. Chairman

Honorable Ministers

Excellencies

Distinguished Delegates

Ladies and Gentlemen,

Let me begin by thanking the ITU Secretary General Mr. Houlin Zhao, and all other officials and individuals for their dedication in implementing WSIS goals and objectives. Let me also share with you some information on the progress we have made in our efforts to reap the benefits of introducing ICTs in the daily life of each citizen in Iran. Our policy has been to improve the quality of services, to diversify services and at the same time make them more affordable by promoting competition, partnership with the private sector and attracting foreign investment, to expand the reach to the remote and rural areas, to facilitate and actively support innovations, and to embrace advanced technologies to improve efficiencies in all aspects. All of the above are embodied in our National Information Network, which is being implemented to provide ubiquitous and affordable broadband services to residents.

I am happy to inform you by implementing the above policies, we now provide broadband services to close to 56,000 villages, the number fixed lines is more than 48 million, the number of active mobile subscribers is in excess of 85 million. The number of broadband users is close to 44 million, where 34 million use 3G and 4G mobile broadband. The utilized international capacity of data services now exceeds 1 Tera-bits-per-second and the domestic backbone IP capacity is close to 7 Tera-bits-per-second. In addition, we have established 7 IXP nodes across the country. Recently, we started to provide fiber-to-the-home connections to residential and business customers in metropolitan areas and will accelerate such efforts in future. Besides, we are moving fast on narrowing the digital gap by utilizing USO funds to expand ICT networks and services to less affluent and remote areas. In doing so, our aim is to introduce useful services in addition to providing broadband connectivity so as to empower residents by providing them with a wide range of applications and informational material. In addition, last year we created more than 100,000 new ICT related jobs by actively supporting startups, R&D and innovations by way of

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

providing grants and low-interest loans. In the past three years, the ICT market size in Iran increased three folds, and we expect to achieve similar expansion in the next five years.

Mr. Chairman, Honorable Ministers,

Our policy is to embrace, facilitate and encourage international cooperation in all matters related to ICTs. We have actively participated in different international conferences, study group meetings, and other fora; and contributed to such meetings in a positive and constructive manner. We shall continue to do so in future, as we firmly believe that only by joining hands, we will be able to make this world a better place not only for us, but for generations to come.

Let me finish by emphasizing on the importance of joint projects with partners from abroad in developing new technologies, new applications, and new services. This is an important pillar of our policy and will promote such activities by giving priorities in our future transactions to those who respond positively to this call. There are many Iranian ICT-related companies that are ready to cooperate at international level in all fields.

Excellencies, Distinguished Delegates,

This gathering is an excellent opportunity to network with other stakeholders, to exchange views, and to benefit from each other's experiences. I welcome your views on our way forward, and thank you for your attention.

Moldova

Mr. Grigore Varanita, Director, National Regulatory Agency for Electronic Communications and Information Technology

Distinguished Excellences, Ladies and Gentlemen,

We are witnessing important changes that are happening in the ICT world, with the advance of Internet of things. These changes are going to determine ways of how people will produce, consume, interact, communicate, do business or just organize their lives.

Our Government believes that high speed fixed and mobile broadband networks are the core infrastructure for a new economy and society that we tend to be. Due to appreciable investing initiatives made by operators, we have obtained good high-speed

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

broadband footprint in cities, with as much as 90% of the subscribers having a high-speed capable access. But the spread of the high-speed broadband networks is uneven throughout our country. The Republic of Moldova has a predominantly rural population and investing in rural areas is not as attractive as in urban areas.

Thus, thinking on developing a modern country, it is obvious that currently leading fixed optical and 4G networks must be further developed to reduce the technological gaps. Also, we must especially keep in mind that the next mobile radio generation with higher bandwidth, 5G, is expected to appear soon and it is going to play a tremendously important role.

As the practice shows, developing broadband networks to cover all citizens and regions is a very challenging task to implement. For example, it is widely recognized that civil engineering works can account for up to 80% of the cost of deploying high-speed networks. Thus, our Government has considered that reducing the need for such works would make broadband roll-out cheaper and would produce more incentives to investing operators.

I would like to mention that, after the Republic of Moldova signed the association Agreement with the European Union, the country took over the regulatory model of the European Union. One of the important European Union's achievements is the Directive on measures to reduce the cost of deploying high-speed electronic communications networks (2014/61/EU), which aims at facilitating and incentivizing the roll-out of high-speed electronic communications networks.

The Republic of Moldova has adopted a national law on access to properties and shared use of the infrastructure associated with public electronic communications networks, which tends to adjust the national framework to that existing in the European Union.

According to the above mentioned law, some important changes to national legislative framework have been made:

- a) The national electronic communications operators have been granted the right of access to public and private properties, including physical infrastructures, in order to deploy their network elements.
- b) The public and private entities have been imposed the obligation to negotiate and offer access to their properties and physical infrastructures at the operators' reasonable requests. Still, some limitations on this obligation apply.
- c) The conditions of such access must be objective, non-discriminatory and at cost oriented prices.
- d) Minimum technical requirements for the newly built multi-dwelling buildings, hotels, offices etc. were set so, that these must be equipped with high-speed access infrastructure and multiple operator access is possible.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- e) Efficient coordination of civil works by making information on such planned works available.
- f) Faster, simpler and more transparent permit-granting procedure.

This must ensure that where suitable infrastructure exists, operators can choose to reduce capital expenditures on civil works, potentially spending more on network infrastructure and enabling more rapid network development.

The National Regulatory Agency for Electronic Communications and Information Technology (ANRCETI) is the national electronic communications regulator of the Republic of Moldova and, according to the above mentioned law, it was invested with several important tasks to perform in order to help operators to reduce their costs of high-speed network deployment.

First of all, ANRCETI became a body that can address disputes between electronic communications operators and public or private entities, which hold properties or physical infrastructure potentially suitable for electronic communications network roll-out.

Secondly, it is an authority responsible for enabling an info center on existing network and physical infrastructures, on public properties with open access for electronic communications operators and conditions applicable to such access, on existing plans and initiatives of major civil works. For the fulfillment of this task, ANRCETI must develop an open database on conditions to access established by public entities and develop a digital inventory on existing network infrastructures.

ANRCETI has already developed a set of normative acts in order implement the above-mentioned law:

- a) the standard Contract for access to public or private property for the construction (installation), maintenance, removal, replacement, transfer or retrofitting of existing public electronic communications networks and infrastructure elements;
- b) the Methodology on the tariffs for the right of access to public properties and/or shared use of physical infrastructure. This Methodology has been approved by the Government.
- c) the Guidelines on access to properties, to help operators better understand the provision of the law and allow them to effectively apply for access.

I must say that measures I mentioned above are seen as capable to remove the bottlenecks and reduce the inefficiencies, thereby reducing the costs of rolling out high speed broadband infrastructure in the Republic of Moldova and creating synergies among different industries.

For us, the need for such developments is very challenging and charming at same time. Also, it is likely that similar changes will be performed in many other countries, if not such are not yet under way. Thus,

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

let me express my high appreciation of the World Summit on Information Society 2017 and thank for the opportunity to share our experience on this important matter.

I thank you for your kind attention.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION EIGHT: Applications and Services

High-Level Track Facilitator (HLTF): Ms Gayatri Khandhadai, Project Coordinator, Association for Progressive Communications (APC)

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Mr. Yushi Torigoe, Deputy to the Director, Telecommunication Development Bureau
3. **Azerbaijan (Republic of)** – H.E. Mr. Elmir Velizadeh, Deputy Minister, Ministry of Communications and High Technologies of the Republic of Azerbaijan
4. **Iran** – H.E. Mr. Nasrollah Jahangard, ICT Vice Minister and Chairman of ITO, Information Technology Organization of Iran (ITO)
5. **Bangladesh** – H.E. Mr. Mohammad Shafiul Alam, Cabinet Secretary
6. **Liberia** – Ms. Angelique E. Weeks, Chairperson, Liberia Telecommunications Authority (LTA)
7. **Clean Development Group (CDG)** – Mr. Scott Phipps, President and CEO (Canada)
8. **Nokia** – Mr. Marc Vancoppenolle, Global Head of Government Relations

Special announcement on a new cooperation agreement between ITU and MIC Japan:

H.E. Mr. Shigeki Suzuki, Vice Minister for Policy Coordination, Ministry of Internal Affairs and Communications of Japan and Mr. Brahima Sanou, Director, Telecommunication Development Bureau, ITU

Introduction

- ICT Applications and services are what makes the internet real and experiential.
- Improving ICT applications and services is a situation of egg and chicken, because better services will automatically lead to more demand for better infrastructure and vice versa

Vision

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- ICT applications have the potential to solve many of our existential problems and social issues
- Each user make use of different kinds of applications services during the daily activities
- A holistic approach needs to be adopted to improve ICT applications to reach people with different needs

Fresh Priorities

- addressing emerging challenges relating to environment
- ensuring that ecommerce reaches all and benefits all through applications and services

Emerging trends

- People using online tools and services for payments- integration of people in the rural area into the broader market
- Use of ICT applications and services for governance
- Use of ICT applications to tackle disaster and health emergency situations

Opportunities

- Lack of access to connectivity is closely linked to poverty and hence the digital divide cannot be treated in a silo but has to be linked to anti-poverty and education programmes to improve digital literacy.
- In remote areas with low population densities where there is no business case for the private sector, the government needs to step in and ensure the development of infrastructure and connectivity through Public/Private partnerships that are open access.

Key Challenges

- The most significant challenge to ICT services is access and the fact that many remain unconnected
- Second is cyber security, unless there is trust between states and the people that they are safe and that their information is safe it will be hard to promote ICT applications
Privacy of users being compromised
- Ideologies interfering with the development of a free internet

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Case Examples

- Bangladesh – 200,000 saplings were planted and rivers were cleaned up with the help of mobilisation on Facebook
- Bangladesh – Moti – a e-filing system for government services which has considerably reduced costs and improved efficiency
- IRAN – emoney services for transfer of money

Road ahead

- Governments should rely, develop and use ICT applications and services for delivery to citizens
- For ICT services to improve we need trust and cyber security and for that states must cooperate with each other
- While we promote ICT applications we must guarantee the safety of personal information and privacy
- Sharing of information and infrastructure as well as data

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Bangladesh

H.E. Mr. Mohammed Shafiul Alam, Cabinet Secretary, Cabinet Division, Government of Bangladesh

How is Bangladesh's model of civil servants using social media as a problem-solution tool so unique?

The Bangladesh Civil Service is harnessing the power of social media to discover creative ways to attain effective citizen engagement in the process of improving public service delivery. For instance, a sub-district created history by having 300,000 saplings planted on a single day by locals under a social media based campaign. Again, 40,000 locals brought together by a DC office Facebook page volunteered to do a clean-up drive of a 3.2km long canal that is the lifeblood of an entire district.

Facebook is now being used as a peer-support platform to encourage the spread of ideas and interaction among experienced senior civil servants and junior officers with innovative ideas and ambition. More than 15,000 civil servants are regularly discussing issues around improving public services in 1 central Facebook page named 'Public Service Innovation Bangladesh' – that is accessible only to civil servants.

With direct monitoring from the Cabinet Division, the Bangladesh Civil Service is institutionalizing and managing the practice of citizen-centric innovation by breaking down hierarchical barriers across all ministries, departments and agencies. The local government were the early adopters of social media as all 64 districts opened up their own DC Office Facebook pages. Convinced by the success and acceptance, more than 5,000 government offices have opened up their own citizen facing Facebook pages through which over 2 million citizens have been engaged through where citizens can ask for help or post complaints 24/7.

How do you think your "less paper office" initiative will enable better service delivery?

Prime Minister's Office and Cabinet Division have combined their strengths to come up with a robust electronic file management and archiving system called Nothi that has provided for quick decision making and service delivery from government offices. Since the roll-out of the system, more than 3000 offices from sub-division level to ministry have installed this system thus improving transparency and citizens' convenience.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Citizens can now do electronic/virtual communication with the government offices sitting at home allowing them to lodge their demand/requirement and track them real time online which was literally impossible in the traditional paper-based filing system. This saves the citizens a huge amount of money and time required previously to obtain a service from government offices.

An office or its relevant section could process only 5-10 files a day in traditional filing system, but now with Nothi this number moved up to around 30-35 files. More than 21,000 users who are already registered in the system can save their valuable work hours since they can now deliver triple the services that previously they couldn't carry out in the traditional filing method.

To improve coverage and sustainability of the initiative, the government has already facilitated capacity development of its civil servants on the use of the e-filing system in their offices so that they can easily embrace it. This initiative is part of an e-government strategy focusing on applications aimed at innovation, promoting transparency and effectiveness in public administration and in strengthening relations with citizens.

Liberia

Ms. Angelique G. Eupheme Weeks, Chairperson, Liberia Telecommunications Authority

ICT in Disaster Management

A Policy Reflection on the Use of ICT in the Ebola Crisis in Liberia

1.0 Abstract

Mankind has often faced disasters, not as a consequence of its wishes or actions, but due to outbreaks of diseases, floods and other forms of tragedy. The Ebola Virus Disease (EVD/Ebola) that hit Guinea, Liberia and Sierra Leone in 2014 and claimed over 11,000 lives, infected over 30,000 people and collapsed the economies of the affected countries was one of such disasters.⁶ While mitigating the tragedy involved different solutions, ICTs played a critical role. In addition to connecting responders, health workers and other stakeholders, it enabled the sharing of data that provided critical inputs in managing the disaster. Amidst these positive interventions, data security, individual privacy and

⁶ McDonald, Sean M. (2015), Ebola: A Big Data Disaster – Privacy, Property, and the Law of Disaster Experimentation

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

other ethical concerns have been raised regarding the extent to which access to personal information available on various ICT platforms is permissible in disaster management. While acknowledging the validity of these concerns, there are compelling reasons that the general good of the society is better served in the careful use of available ICT tools in disaster management. Therefore, the challenge for policy makers and other stakeholders is to find acceptable ways to address these concerns.

2.0 Introduction

In early 2014, the West African countries of Guinea, Liberia and Sierra Leone experienced the largest outbreak of Ebola in history. This disease wiped out many households, left communities devastated, society traumatized and economies deflated. It tortured the affected nations, leaving about 30,000 persons infected and also killed over 11,000 persons. It posed severe danger to the survivability of people across those nations. It took less than 14 days to kill its victims and had less than 15 percent survival rate. As a sickness, it had no boundaries, unleashing a heavy death toll even on health workers, usually presumed to be safe. After 19 months of its gruesome reign in a region with poor medical infrastructure and low human capital in the health sector, the disease had succeeded in shutting down the health sector across the sub region.

The effort to overcome the Ebola Virus Disease came too slowly. National health authorities in the affected countries initially took the outbreak for granted. Their attitude could have been a result of lack of the necessary capacity or a lack of insight regarding public health safety. These factors arguably contributed to the inability of stakeholders to prevent a tragedy that was preventable. Other factors such as the late involvement of specialized global health bodies on outbreaks such as Ebola, and the subsequent involvement of other responders in an uncoordinated way initially, all contributed to the high impact of the tragedy.⁷

The first contribution of this policy paper is to demonstrate how the use of ICT was effective in mitigating the Ebola tragedy across the affected nations. Second, it will show the common forms of ICT platforms that were adopted along with the strategies applied to make them effective. It will then assess the

⁷ Liberia President Ellen Johnson Sirleaf's Letter to the World (Delivered Via the BBC World Service). See, <http://www.guardian.co.tt/news/2014-10-17/liberian-president-sirleafs-letter-world-calls-ebola-aid>; downloaded 5 June 2017.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

challenges that were encountered while using ICT to manage the Ebola tragedy. It will also illustrate how a failure in one sector can impact many other sectors in human society. It will then present its findings, which confirms the perceived vulnerabilities of health systems across the region and showcase how gaps in ICT services, which is sometimes the consequence of lack of infrastructure, can have a direct impact on wellbeing. It will conclude by making recommendations that essentially consider the lessons learnt in putting in place systems to prevent such tragedies from ever taking place again.

3.0 Essence of ICT in disaster management

ICTs have various functionalities. From innovation to entertainment and employment, it is also a tool that supports the security of an individual, a group or a whole nation. When people are in a disaster situation, ICT can be applied as a part of the solution to meet their security needs. This is how crucial ICT is in managing disaster. During the Ebola outbreak in Liberia, ICT was effective in helping the responding community to gather and analyze data while at the same time, it became a platform that safeguarded people from getting in harm's way. ICT is therefore essential in managing disasters, as has been seen in Liberia, and in other countries that have experienced national disasters.

A. Rationale

The scale of a national disaster usually makes it a complex problem. National disasters do not only affect persons in terms of their physical security, they can also affect community safety, national economies, the environment and the culture of a people. Ebola began like a simple problem for a household. It subsequently grew bigger, affecting individuals, the people's way of life, the environment and the national economy. The security risk associated with Ebola, proves that every society is interconnected, given the threat it posed to international security systems. While other interventions such as logistics, medical supplies, health workers and the military, among others, in part contributed to the solution; each depended on Information Communication Technologies for optimization. Using ICT in the fight against Ebola was therefore not one of choice but an issue of compelling necessity. The rationale of applying ICT in the fight against Ebola was to ensure an efficient sharing of resources, timely dissemination of information and reliable collecting and analysis of data for evidence-based decision making.

The fight against Ebola could not have been successful in the absence of real-time data about critical aspects of the response regarding where EVD transmissions were occurring, case notifications, geographic spread of the EVD, health service availability and infection control options.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

ICTs were used to highlight areas of risks, vulnerabilities and potentially affected populations, by producing geographically-referenced analysis. ICTs were also required to ensure better coordination of response efforts and avoid the duplication of efforts and resources and data fragmentation.

B. Some ICT platforms and services

Mobile network platforms of the three Mobile Network Operators (MNOs) in Liberia provided a vital set of tools to access hard-to-reach populations of infected individuals and affected households; and provided them with life-saving information, financial support, and monitoring of vital epidemiologic surveillance information. ICTs were therefore used to map and geo-locate EVD outbreaks as well as to collect and share data in near real-time. The ICT tools used by the response community included tools for point-of-care diagnostics, case management, logistics management, community mobilization, payment and financial support distribution, and data analytics solutions for Ebola responders and affected communities. mHero, a suite of open-source mobile phone-based communication systems, was used for contacting, informing, surveying, and polling facility-based and community health workers on information, such as training materials, Ebola lab test results, and equipment/supplies. Similarly, the District Health Information System 2 (DHIS2), a web-based open-source district health information system was adopted by the Ministry of Health and Social Welfare (MOHSW) as the government's repository for all aggregate health data. Visualization features that were helpful included dashboards, GIS, charts, and pivot tables.⁸ While these ICT platforms were adopted in Liberia, similar tools were also applied in countries that experienced Ebola cases as well.

4.0 The absence of ICT platform and services in disaster management as a challenge

ICT can become a tool of convenience or a platform of necessity depending on its functionality. Prior to the Ebola outbreak in Liberia, access to ICT was optional. When the need to have access to real time information regarding the spread of the virus became evident, ICTs then became a necessity in the context of individual and group security. Every country, particularly so in sub Saharan Africa needs to develop its IT infrastructure, content and service for the good of the society. The absence of the requisite IT infrastructure can create the impression that ICT services and tools are for elites; and this is not the case. One of the factors that made the Ebola virus last longer was in part due to the absence of the ICT Platforms

⁸ USAID Technical Brief (November 2014): Use of Technology in the Ebola Response in West Africa

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

and services in other parts of the country. *No one can effectively manage a disaster without making use of ICT platforms.*

5.0 Findings of the impact of ICT in managing the Ebola disaster

There were critics who believed that the use of ICTs in the fight against Ebola compromised data security and privacy and did not conform to some ethical guidelines.⁹ Others raised concerns regarding the inability of authorities in the affected countries to swiftly put in measures to prevent the tragedy. They suggested that specialized international bodies should have intervened earlier to mitigate the gap. A lot more critiques on what ought to have happened, but did not happen still abound! What has not changed is that the EVD epidemic had a devastating socio-economic impact on the affected countries. The World Bank estimated that the equivalent of US\$3.3 billion in gross domestic product (GDP) of the three countries was lost due to the outbreak.¹⁰ The graphic details show lower investment, substantial loss in private sector growth and declining agricultural production, leading to concerns about food security during the period.

Associated with the loss was over 3.6 billion US Dollars that USAID estimated the international community had donated to provide personnel, technical expertise, and resources to the EVD response and the establishment of emergency operations centers in Guinea, Liberia, and Sierra Leone. This huge sum of money was not invested to enhance development – it was rather spent to contain a health crisis! To prevent this kind of tragedy, government and development partners will need to invest in social and physical infrastructures and the parallel agencies to man those infrastructures.

6.0

Conclusion

Most disasters that take place with a terrible consequence could be mitigated, or possibly prevented. The Ebola outbreak across Liberia, Guinea and Sierra Leone is one of those tragedies that became a near global disaster. In contending with disaster, the use of ICTs to ensure an efficient sharing of resources, timely dissemination of information and reliable collection and analysis of data for evidence-based decision making in managing the disaster, has provoked a new wave of concerns. Data security, individual privacy

⁹ McDonald, Sean M. (2015), Ebola: A Big Data Disaster – Privacy, Property, and the Law of Disaster Experimentation

¹⁰ USAID Technical Brief (November 2014): Use of Technology in the Ebola Response in West Africa

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

and other ethical concerns have been raised regarding the extent to which access to personal information available on various ICT platforms is permissible in disaster management.

While acknowledging the validity of these concerns, there are compelling reasons that the general good of society is better served in the careful use of available ICT tools in disaster management. Therefore, the challenge remains for policy makers and other relevant stakeholders to find acceptable ways to address concerns, such as the use of algorithmic data anonymization to remove privacy related information. The Government of Liberia remains mindful of citizens' rights but would take measures as provided under its laws to protect the collective safety of the State. Big Data initiatives such as the CDR analysis project undertaken by ITU in Sierra Leone, Guinea and Liberia, would complement our policy in keeping the society safe.

Thank you for listening.

Nokia

Mr. Marc Vancoppenolle, Global Head of Government Relations

The emergence and accelerated adoption of digital technologies is leading to a social and economic transformation as well as to positive impacts on inclusion, education and wellbeing. As such, policy makers all over the world are grappling with common questions on how to optimally guide the path to digitalization.

While connectivity remains the foundation for digitalization, no longer can we focus solely on the policies and regulations that enable connectivity. Rather we need to think more broadly and work with those responsible for policy in areas like transportation, agriculture, health, education, and more to ensure that barriers are removed and incentives accelerated for the use-cases to flourish. Policy and regulatory environments in each of those sectors, sometimes written over a generation ago, must be assessed and revised to enable the benefits of digitalization to come to life as more people and things get connected.

To support governments on the road to digitalization, the Broadband Commission Working Group on Digitalization Scorecard, chaired by Nokia, issued [a report](#) on June 5th 2017 with following recommendations:

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Governments should create a mechanism for cooperation across existing institutions. An adequately resourced and empowered (collegial) body dedicated to driving digitalization should greatly contribute to accelerating the progress of digitalization. Such a body, given its horizontal role across sectors, should have an easy access to appropriate departments responsible for sector specific initiatives and a clear mandate to consult with all relevant stakeholders to create an inclusive strategy.
- Responsible data sharing should be enabled by adequate policy frameworks to enable big data and analytics that will help optimize business processes and be better stewards of scarce resources.
- Governmental funding may kick-start the digitalization progress. An initial public funding for digitalization projects can act as seed money and further mobilize private sector investments. Moreover, governmental funding could steer the development of innovations into areas with most societal benefits.
- National strategies provide clarity of vision on digitalization's critical elements – beyond National Broadband Strategies, also National Digital Economy Strategies, National Cyber-security Strategies, and National Smart Cities policies, are important for a country to advance critical elements of digitalization.
- Education and awareness raising are critical to effectively implement digitalization policies. Sector-specific campaigns will more effectively help raise awareness about opportunities brought by digitalization, as well as encourage greater acceptance of digital solutions among stakeholders.

Regardless whether a country is of high, middle or low income, there is no room for complacency. Some countries are more mature in their approach to digitalization, and have already done well to establish policies and regulations for digitalization. Yet even there, continued action is required to encourage digitalization initiatives to thrive and scale. For those countries lower on the adoption curve, focus on more constructive policy and regulatory frameworks and appropriate governmental interventions presents an opportunity to unleash digitalization at a faster pace, and leapfrog.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION NINE: Enabling Environment

High-Level Track Facilitator (HLTF): Mr. André Lucas Fernandes, (Youth Representative) / Lawyer and researcher on Law and Technology at the Federal University of Pernambuco, ISOC's Youth SIG

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** - Mr. Kemal Huseinovic, Chief, Department of Infrastructure, Enabling Environment and E-Applications (IEE)
3. **Congo (Republic of the)** – S.E. M. Léon Juste Ibombo, Minister, Ministère des Postes et des Télécommunications
4. **Sudan** – H.E. Mr. Ibrahim Ahmed Mohamed Osman, State Minister of Communications and Information Technology
5. **Paraguay (Republic of)** – Eng. Mirian Teresita Palacios Ferreira, President, Comisión Nacional de Telecomunicaciones (CONATEL) (Represented by Nicolas Evers, Advisor, CONATEL)
6. **ASIET** – Mr. Pablo Bello Arellano, Secretary General (Spain)
7. **Microsoft** – Dr Carolyn Nguyen, Director, Technology Policy, Microsoft

INTRODUCTION

The enabling environment is a complex and interdisciplinary theme. It requires joint effort and real appreciation of the multistakeholder technique, as has been occurring in several national and international initiatives.

The evolution of the strategies should take into account not only the digital divide and national regulation (law sphere) issues, but also the social dimensions, the local contexts and the capacity building processes for the self representation (gender divide, human rights, real access to the infrastructure).

VISION

There is a consensus on the catalytic capacity of ICTs and the potential to strengthen all sectors of society, with the need to reduce barriers and bring together the efforts of the various stakeholders.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The countries are taking various initiatives to act in the last mile; creating innovative and effective access solutions.

There is also a consensus on the challenge of building bridges and contextual projects to empower the future content and knowledge producers, not only in developing countries, but in developed countries too and how they relate to issues such as big data and cyber security.

The changes of the information society happen in an accelerated way compared to the regulation process. It is not the case to make a confrontation of paradigms, but to rethink the form of regulation and construction of regulation.

FRESH PRIORITIES

The coordinated collaboration of the various agencies of the United Nations with data crossing treatment for focused actions, in the attempt of an effectively enabled environment.

The need to reflect on the full presence of the Internet of Things in cities of the developed and developing world, affecting regulatory processes and also the absence of regulation - a joint effort by the public and private sectors is necessary to build a clear action panorama .

The connection of the last mile by different types of devices and not just by the heavy infrastructure is a reality that should be considered.

The phenomenon of the Internet of Things can provoke a widening of the digital divide between countries and between groups inside the countries.

The question of digital divide needs to be treated as urgency and not just as a another issue in forums and policies.

EMERGING TRENDS

The need for capacity building programs “included” in a training process that takes into account their reality, context and a critical point of view.

The TICs as catalysts of a new economic model post-exhaustion of the dynamics of commodities - changing the market standard of a “consumer internet” for a “production internet”.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Creation of projects that guarantee not only the infrastructure in the last mile, or the best connection in the localities, but the accessibility of people and devices in a general sense.

The notion that the environment is an interconnected ecosystem whose production of action and politics passes through the multistakeholder arena.

The issue of cybersecurity appears as a base element for the construction of the enabling environment process.

OPPORTUNITIES/LINK WITH THE SDGs

ICTs act directly and synchronously on all issues listed in Agenda for 2030, which means that all Sustainable Development GOALS (SDGs) are present in the discussion.

The projects executed in each country can be coordinated in joint initiatives that learn from their similarities and differences – using tools offered by the same stakeholders (like ITU tracker).

It is therefore necessary to act locally, thinking globally and taking into account that each SDG only addresses one aspect of a system that requires simultaneous and complex action - as in the example of the gender issue, quoted in the session and forum several times.

The flow of information at the global level allows the creation of jobs, qualified debates and economy growth in the process of synthesizing more efficient regulations for the environment.

KEY CHALLENGES

Ending the different aspects of digital divide is the biggest challenge put for everyone today.

Ensure not only infrastructure, but legislation capable of strengthening economic processes and dynamizing the activities of individuals.

Strengthen the multistakeholder debate as the primary form of policy building at all levels regarding Internet scale.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Structuring action plans so that an enabled environment is an environment where subjects not only consume information but produce knowledge - they are, therefore, individuals.

CASE EXAMPLES

Mr. Ibombo, from Congo explained that they launched a Governmental program for free Internet and have made available public bus lines so that young people can connect to the internet in hotspots, for free. It is a measure for democratization.

Mr. Nicolas, from Paraguay, explained that they have defined a number of conditions to strengthen cellular telephony. They are using the 1700 to 2100 band for 4G, aiming the granting of licenses. So that it is possible to draw upon the advantages of fourth generation. They have a number of mobile telecenters with the structure necessary for training for children, young people and broadly speaking this all citizens over the next years.

Ms. Carolyn Nguyen, from Microsoft, explained that they had a project in Kenya, which its main purpose is to go out to the remote areas where there is no electricity and the project was developed, in partnership with the government and a local system operator. They began to think about the communities and the challenge of the first step and maintenance of a digital ecosystem. They also empower, by Internet, libraries and schools around the world with the local people.

ROAD AHEAD

The structuring and strengthening of all multistakeholder experiences around the world in policy-making appears as a focal point.

The need to create effective regulatory models in which the public and private sectors take into account the effective connection of unconnected, simple and effective legislation *pari passu* with factual data.

Apply the data produced by ITU and several other organizations in a coordinated way with the aim of producing multifocal and accessible static data to all stakeholders.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Congo (Republic of the)

S.E. M. Léon Juste Ibombo, Minister, Ministère des Postes et des Télécommunications

Monsieur le Président,
Monsieur le Secrétaire Général de l'Union Internationale des Télécommunications,
Excellences Mesdames et Messieurs ;

En prenant la parole devant cette auguste assemblée, je voudrais tout d'abord m'acquitter d'un devoir, celui de remercier au nom du Gouvernement de la République du Congo, Monsieur le Secrétaire Général de l'Union Internationale des Télécommunications, pour son invitation à participer au Forum 2017 du Sommet mondial sur la Société de l'information, (SMSI) en sigle.

Monsieur le Président,

Conscient du rôle essentiel des technologies de l'information et de la communication pour l'avenir de l'humanité, le monde est engagé depuis plus d'une quinzaine d'années, dans la mise en œuvre de programmes de développement durable fondés sur un principe fondamental établi lors du premier SMSI à Genève en **2003**, à savoir **"la Société de l'Information doit être fondée sur la possibilité donnée aux individus, aux communautés et aux peuples de créer, d'obtenir, d'utiliser et de partager l'information et le savoir, en favorisant leur développement durable, en améliorant leur qualité de vie ainsi qu'en respectant pleinement les droits de l'Homme "**.

Fort de ce principe et du plan d'actions du SMSI, le président de la République du Congo, **Son Excellence Denis SASSOU NGUESSO** a intégré en **2004**, les Technologies de l'Information et de la Communication comme élément catalyseur de sa stratégie de réduction de la Pauvreté dans le Document intérimaire de Stratégie de Réduction de la Pauvreté, avec comme objectif stratégique : **« assurer la couverture nationale en matière de communication et des TIC afin de garantir un accès universel aux services de la téléphonie et à l'Internet d'une part, et d'accélérer l'introduction du Congo dans la société de l'information d'autre part »**.

C'est ainsi qu'à l'échéance **2015** précédemment fixée pour l'atteinte des objectifs de développement pour le millénaire dernier, le Congo s'est arrimé à la société de l'information grâce à la mise en œuvre de projets

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

gouvernementaux structurants financés sur fonds propres ou avec l'aide des partenaires tant bilatéraux que multilatéraux; projets réalisés suivant deux axes stratégiques fondamentaux, à savoir :

- Premier axe stratégique : La mise en place d'un nouveau cadre juridique et institutionnel adapté aux objectifs de l'édification d'une société de l'information. La réalisation de cet axe a donné le gage d'une bonne gouvernance du secteur qui a attiré des investisseurs, notamment en téléphonie mobile, qui d'une part ont créé plusieurs emplois et ont permis de doper la croissance dans le secteur et d'autre part ont rendu disponible partout sur toute l'étendue du territoire national plusieurs services de communications électroniques innovants, notamment ceux de la technologie 4G lancée en **janvier 2017**.
- Deuxième axe stratégique : Le développement d'une infrastructure nationale des TIC, ouverte à la sous-région et au monde, dont la mise en œuvre a notamment permis :
 - le maillage du territoire national en infrastructures de base de télécommunications à très haut débit, à travers l'installation d'un backbone national en fibres optiques duquel sont déployées des bretelles optiques vers l'intérieur du pays ;
 - la connexion du Congo au réseau mondial de câbles sous-marins à fibres optiques ;
 - l'interconnexion sous-régionale par liens optiques avec le réseau des télécommunications du Gabon. L'opération se poursuit actuellement avec le Cameroun et la République Centrafricaine.

Dans le cadre de ce programme de développement d'infrastructures de base au Congo, il sied de signaler qu'en matière de connectivité Internet, le Congo a construit en **2013**, le premier point d'échange Internet CGIX ; ce qui lui a valu d'être choisi par l'Union Africaine pour abriter le nœud Internet sous régional d'Afrique centrale.

Monsieur le Président,

Concernant la réalisation des 17 objectifs de développement durable fixés par les Nations Unies à l'horizon **2030**, et qui constitue le thème central du présent forum, au Congo, la contribution du secteur des technologies de l'information et de la communication y est projetée à travers la mise en œuvre de la nouvelle vision politique sous-tendant l'action gouvernementale en la matière, à savoir « **Arrimer le Congo au développement de l'économie numérique** ».

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Ainsi, après avoir construit le socle d'une économie numérique dont l'éclosion véritable est tributaire du développement des multiples usages et services à valeur ajoutée qu'offrent les TIC et accessibles à tous, l'enjeu pour le Gouvernement de la République du Congo est de parfaire et de consolider l'ancrage du pays dans la société de l'information par le développement de vastes projets TIC structurants susceptibles d'infuser aussi bien le tissu administratif qu'économique du Congo.

A cet égard, plusieurs chantiers contenus dans le programme gouvernemental, dénommé **la Marche vers le Développement**, sont actuellement en cours de réalisation dans le cadre de divers partenariats, notamment :

- la création du cadre juridique et institutionnel de la société congolaise d'information ;
- le déploiement du dernier kilomètres, autrement dit, "last mile" en fibre optique, afin de faire bénéficier de l'accès au très haut débit aux ménages et aux entreprises ;
- l'installation d'un Datacenter, prélude à de l'Intranet gouvernemental ;
- la création d'un incubateur et d'un technopole.

Monsieur le Président,

En vous transmettant les chaleureuses salutations du Gouvernement de la République du Congo qui suit avec grand intérêt le déroulement de nos travaux, permettez-moi de réaffirmer la détermination de mon pays à promouvoir et développer davantage les technologies de l'information et de la communication au service du développement durable conformément aux dispositions de la Résolution 70/125 de l'Assemblée Générale des Nations Unies.

Monsieur le Président,
Excellences Mesdames et Messieurs,

Avant de clore mon propos, je me fais le devoir de rendre un hommage solennel, au nom du Gouvernement de la République du Congo, aux organisateurs de ce forum et à l'UIT qui ne cessent d'avoir un regard bienveillant en direction de l'Afrique.

Je vous remercie!

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

بين الشعوب وتحقيق التنمية المستدامة ، وتجسير الفجوة الرقمية بين البلدان والشعوب ، ومن هنا يطيب لي أن أعلن عن إلتزام السودان بمبادئ وأهداف التنمية المستدامة وبكل نتائج القمم السابقة لمجتمع المعرفة .

السيدات والسادة الضيوف الكرام،

على الرغم من التحديات التي واجهت السودان بسبب الحصار الإقتصادي والتكنولوجيا ، إلا أن قطاع الإتصالات وتكنولوجيا المعلومات قد حقق نجاحات مميزة خلال الفترة السابقة ، وأرجو أن تسمحوا لي أن استعرض بعضا مما تحقق في القطاع :

ففى مجال البنية التحتية فقد بلغ طول الإلياف الضوئية أكثر من (31 الف كلم مربع) بنسبة تغطية بلغت 85% من المساحات المأهولة ونسبة 64% من مساحة السودان الكلية حوالي 2 مليون كلم2 وهذه البنية التحتية يمكننا ربط القارة الأفريقية، وبلغ مشتركى الهاتف السيار (27.919.731) مليون ، وتجاوز مستخدمى الانترنت (17.000.000) مليون وفى مجال الربط الشبكي فقد زادت المؤسسات التى تم ربطها عبر الشبكة القومية لتصل لأكثر من الفى مؤسسة حكومة وتعليمية وصحية عبر الألياف الضوئية .

وفى إطار التشريعات والسياسات والإستراتيجيات والحوكمة فقد تم إعداد إطار عام للحكومة الإلكترونية وإصدار السياسات الوطنية للمعلومات والإتصالات والبريد ، وإصدار عدد من التشريعات المعلوماتية وتحديثها

وفى مجال الخدمات الإلكترونية والنظم والتطبيقات فقد تم إطلاق النسخة الثانية المطورة من بوابة السودان الإلكترونية ، وتطبيق نظام للسداد الإلكتروني فى كل انحاء البلاد عبر نظام موحد ، بالإضافة الى العديد من التطبيقات والنظم المتخصصة فى مجالات التعليم والصحة وغيرها ، عبر البوابة

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

ومنصات الهاتف الجوال. وقد فاق عدد المواطنين المسجلين بالسجل المدني أكثر من ثلاثين مليوناً، ووضع الإستراتيجية الوطنية لأمن المعلومات . وهذا جزء مختصر من الانجازات التي تحققت والتي لايسع المجال لسردها ونؤكد بأننا سنمضي قدماً نحو تحقيق المزيد من المكاسب والإنجازات، ويحفزنا في ذلك النتائج الإيجابية التي تحققت واثرت على أداء الخدمات ورضا المواطن وعلى الاداء الاقتصادي ، مما حفز الدولة باعتماد برنامج الحكومة الإلكترونية والتحول الرقمي واحدا من أربعة عناصر تمثل عماد برنامج الإصلاح في السودان.

الحضور الكريم

إننا في السودان بقدر ما نحرص على بناء مجتمع للمعلومات يكفل للمواطن حقه في الوصول للمعلومات والحصول على الخدمات ، ويضمن إنسياب المعلومات وتداول المعرفة بدون حواجز أو قيود، بقدر ما نرى ضرورة ضبط معايير أخلاقية عالمية تكون بمثابة الجدار الواقي لمجتمعاتنا من الإستخدامات السالبة لوسائل الإتصال الحديثة، وعلى مستقبل الأجيال القادمة ، لذا فلا بد من رؤية موحدة شاملة تراعى خصوصية الدول والشعوب نلتزم بها جميعاً ، حفظاً على حقوق الإنسان وقيمه ومثله ، وعلى حقوق الدول وأمنها .

الحضور الكريم :

إن من أبرز التحديات التي تواجه الجميع تحدى امن المعلومات Cyber Security ، فلقد أصبحت الهجمات الإلكترونية تهدد مختلف المجالات ، وأصبح الفضاء الإلكتروني مجالاً مفتوحاً أمام الأعمال الإرهابية وأعمال القرصنة الإلكترونية ، ومن هذا المنطلق يصبح الحرص على حماية الأنظمة والشبكات وتأمين سلامتها مسؤولية أخلاقية جماعية تشترك في تحملها المجموعة الدولية بأسرها، من أجل المحافظة على المكتسبات التي تحققت ، وهنا لابد من تضافر الجهود وتكامل الأدوار الدولية في مكافحة أعمال القرصنة

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

السادة والسيدات،

إن أملنا كبير في أن يكون هذا المنتدى السنوي، محطة حاسمة في بلورة الحلول للموضوعات المطروحة والتوصل إلى نتائج على مستوى التحديات

وفي الختام أمل أن تتوج أعمال المنتدى بنتائج تستجيب لتطلعات شعوبنا، وآمالها في التنمية والرفاه والأمن والإستقرار

والسلام عليكم ورحمة الله .

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Paraguay (Republic of)

Ms. Mirian Teresita Palacios Ferreira, President, Comisión Nacional de Telecomunicaciones (CONATEL)

Señor moderador, apreciados miembros de la Unión y múltiples partes interesadas

Damas y caballeros

Ininterrumpidamente y sin descanso desde la invención de la rueda hasta lo más reciente del Internet de las cosas o del Internet de Todo; los dispositivos que se fueron creando nos han brindado el poder de llegar más lejos, más profundo, más en el detalle y con más precisión en la tarea de mejorar nuestras condiciones de vida y alcanzar y superar la cobertura de las

necesidades básicas de estos tiempos.

El Paraguay reconoce todos los esfuerzos en las investigaciones, las invenciones y las oportunidades que este nuevo escenario de la comunicaciones abre para cada individuo sin distinción de pensamientos o condiciones sociales incluso de discapacidades y por eso desea participar de ello en el sentido de que todos los habitantes del territorio del cual es responsable soberanamente tengan todas y cada una de las oportunidades disponibles para su aprovechamiento.

En la Unión somos estados miembros que han sabido llevar sus problemas hacia las soluciones por medio del dialogo, el esfuerzo sin descanso de comprender el punto de vista de los demás miembros y sus genuinos intereses, por dichas razones el Paraguay ha avanzado en su participación más activa en los diversos foros y reuniones que la Unión ha propiciado, siempre en la defensa de sus intereses como País en situación de desventaja con relación a los que tienen costas sobre las aguas internacionales del mundo y con los espacios que hemos ganado y nos han permitido participar, presentamos nuestra posición y de acuerdo a nuestro entender la posición de un gran número de estados miembros con nuestra situación, algunos de estos países han podido superar en su totalidad todos los obstáculos, así como han podido construir confianza y consenso para la superación de todo tipo de barreras, sin embargo hay otros estados miembros que aún siguen bregando por mejores momentos y tiempos de reconocimiento de estas necesidades.

No podemos dejar de entender e incluso de admirar a países que en su situación de alta complejidad de intereses globales, realizan el esfuerzo sin cansancio de comprender y tratar de adecuar sus acciones a fin de ayudar en la medida de sus posibilidades a países como el Paraguay.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Deseamos informar a la comunidad internacional que hace dos años la CONATEL, con la ayuda de la Unión Internacional de Telecomunicaciones, elaboró el Plan Nacional de Telecomunicaciones 2020, enmarcado en las directivas del Gobierno Nacional contenidas en el Plan Nacional de Desarrollo Paraguay 2030.

El Plan Nacional de Telecomunicaciones contempla objetivos ambiciosos para que las telecomunicaciones constituyan un factor de soporte e impulso a la educación, a la salud, a la economía y a la seguridad en nuestro país. El Plan refleja la determinación de un Gobierno que desarrolla su labor, por y para la gente.

El conjunto de iniciativas vinculadas con el Plan Nacional de Telecomunicaciones tienen la marca del Gobierno Nacional denominada “Paraguay Digital”.

La determinación del Gobierno Nacional de maximizar los beneficios para la gente se trasladó en la definición de las condiciones establecidas en el Pliego de Bases y Condiciones de la Licitación para el otorgamiento de licencias del Servicio de Telefonía Móvil Celular y de Acceso a Internet y Transmisión de Datos utilizando la banda de frecuencias 1700-2100 MHz facilitando el acceso a las telecomunicaciones de 4ta. Generación.

Si bien el objetivo primario del otorgamiento de las licencias ha sido que la población pueda aprovechar los beneficios de la cuarta generación de comunicaciones móviles, lo cual ya lo viene haciendo. No obstante, es pertinente destacar que fueron impuestas obligaciones regulatorias de compromiso social.

66 telecentros fijos instalados en instituciones educativas y 6 telecentros móviles que recorrerán el país. Los telecentros cuentan con instructores para desarrollar programas de capacitación y formación a niños, jóvenes y a la ciudadanía en general, por un periodo de 4 años.

9.900 paquetes subsidiados destinados no solo a los estudiantes de institutos de formación docente, sino también a estudiantes de universidades nacionales.

1152 computadoras con acceso a internet de alta velocidad, destinados a escuelas y colegios, a centros de salud y hospitales, y a comisarias del país.

Tenemos mucho aún por hacer y también que aprender de los demás miembros de la Unión sin distinción del grado de desarrollo porque todos tenemos algo que aportar, razón por la cual debemos seguir participando activamente en todos los foros posibles.

El Paraguay desea expresar su interés en continuar apoyando las gestiones de la Unión en todas sus áreas técnicas e institucionales y también de seguir aportando su participación como estado miembro en el Consejo de la UIT llevando siempre la voz desde su condición de país en desarrollo sin litoral marítimo.

Gracias.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

ASIET

Mr. Pablo Bello Arellano, Secretary General

ASIET would like to thank the ITU for this opportunity to share their views on this important issue.

Speaking on behalf of Latin-American telecom operators, ASIET (Interamerican Association of telecom enterprises) believes that an enabling environment is **essential** to reach the social and economic advantages of the Internet, and consequently, of the Information Society and for the achievement of the Sustainable Development Goals (SDG).

At the end of 2016, 3.2 billion people were using the Internet, representing 47% of the world's population. Internet access is a catalyst for economic and social welfare, give access to the remaining

53% is a need to complete the revolutionary potential of the Internet.

Innovation, building and developing ICTs and infrastructure are crucial, but it requires that the necessary legal, policy and regulatory frameworks and approaches that are in place at national levels be revised in order to be adapted to the new scenario and so continue promoting investment in ICTs and infrastructure, fostering entrepreneurship and innovation.

An Enabling Environment requires a flexible and light touch regulation for emerging and innovative technologies and business models, that means to apply the **same rules** for all the players in the Digital Ecosystem value chain.

The new actors like OTTs have changed radically the value chain in the Digital Ecosystem, they are practically in any link of the chain except in providing connectivity, OTTs and Telcos are important actors, they need one the other in order to improve the Digital Ecosystem. It is necessary to achieve a balance in their responsibilities on the infrastructure capacity.

An harmonious development is paramount, telecommunications networks are essential to Internet, the innovation is produced both in the networks as over the network, a **Level Playing Field** policy in order to avoid asymmetries and to preserve the **sustainability** of the Digital Ecosystem is a need that could not be ignored.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

However, this is not possible without a regulatory environment and public policies which encourage new privacy investments in infrastructures.

A regulatory **light touch** approach progressing to an ex-post model should be applied, encouraging competition and enabling the entrance of new players in the ICT ecosystem, while permitting the promotion of innovative business models.

To achieve the full power of the Internet and ICTs, **the connectivity** is a paramount key. The connectivity will occur over networks and with technologies funded primarily by private industry investments and for long time the established communication services are based on global and universal connectivity (interoperability) through numbering and open standards, however, these doesn't occur with Internet-based proprietary applications and services (e.g. VoIP, Messaging) which are increasingly **substituting** such established communication services, but **interoperability** is rare. Policy makers and regulators should promote interoperability between communication and messaging services to foster competition and improve consumer experience.

In order to foster private sector resources and attracting both foreign and domestic investment to achieve an Enabling Environment administrations have to consider among others these key policy issues:

- A technology neutral laws and regulation (same services same rules)
- A regulatory framework which promotes competition and fosters entrepreneurship;
- Transparency;
- Effective measures to combat corruption;
- Rule of law;
- An stable legal system;
- A digital literacy and ICT education

And in the other side, an Enabling Environment has to be founded on **security**, in this sense international cooperation between governments and stakeholders is essential to protect consumers and businesses. Governments should be more transparent about national security measures and must respect human rights and the rule of law.

Administrations must:

- Improve the legal framework and cooperation between states to eliminate loopholes that cyber criminals can use due to the global nature of the Internet;
- Develop cyber-security standards and homologation processes that must be met by personal devices vendors in order to trade their products.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Intensify its efforts for “security by design”, especially for personal devices and in social networks, to secure customer experience;
- Enhance ways of collaboration to define and update standards and best practices that allows maintaining a secure cyber space;
- Agree on the adoption of a single cyber-security standard to establish an appropriate security and privacy baseline.

As was underlined in the outcomes of the ten-year review of the implementation of World Summit on the Information Society (WSIS) by United Nations General Assembly (UNGA) in December 2015, the **multistakeholder model** has demonstrated be very successful. When governments work together with other stakeholders significant progress can be made in raising capacity, knowledge, and understanding of the issues.

Therefore, we believe in strengthening the multi-stakeholder dialogue on Internet public policies, in a transparent way and based on mutual trust, putting at the centre of the debate the closure of the digital divide. This requires to understand the technological and economic dynamics of the Digital Ecosystem and put the focus on the "unconnected" rather than the ones already connected.

This collective and cooperative approach is essential for furthering the progress and ensuring the on-going stability and continuity of an inclusive, people-centred Internet that can foster ICTs for knowledgeable societies and sustainable development.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION TEN: Digital Economy and Trade

High-Level Track Facilitator (HLTF): Ms. Dominique Lazanski, Public Policy Director, GSM Association

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator** - Mr. Torbjörn Fredriksson, UNCTAD
3. **Portugal** – H.E. Mr. Guilherme W. d'Oliveira Martins, Secretary of State of Infrastructure, Ministry of Planning and Infrastructure
4. **Singapore (Republic of)** – Mr. Leong Keng Thai, Deputy Chief Executive, Infocomm Media Development Authority of Singapore (IMDA)
5. **United Kingdom of Great Britain and Northern Ireland** – H.E. Mr. Julian Braithwaite, UK Ambassador and Permanent Representative to the United Nations and Other International Organisations in Geneva
6. **World Economic Forum** – Mr. Fadi Chehadé, Senior Advisor (Switzerland)
7. **Intervale** – Dr. Yury G. Grin, Deputy Director General (Russian Federation)

Introduction

- There are a number of challenges to enabling the digital economy.
- Different countries are at different points in their development, but all countries and regions will need involvement of all stakeholders to enable a digital economy.

Vision/Fresh Priorities

- Create an enabling environment for both innovation and investment.
- Focus on skills and capacity building not just in schools, but at all levels of education and training.
- Create opportunities for developing and ensuring trust through data privacy, data protection and cybersecurity.

Opportunities/Partnerships

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Opportunities for governments to share experiences and successes with each other in general especially on how policies to enable a digital economy can help the digital economy to grow.
- Institutions in Geneva – both multilateral and non-governmental – have a role to play in terms of convening all stakeholders and especially governments to share experiences and discuss issues.
- Partnerships are key to developing the digital economy further.
- Data is the new currency and this presents both opportunities and challenges both, but it is a reality as it is borderless.

Key challenges

- How to grow the digital economy and enable trade?
- Investment and infrastructure development for connectivity still issues.
- How to enable trust especially with respect to data privacy and cybersecurity?
- How to avoid duplication of work to support the growth of the digital economy and digital trade?

Case Examples

- Portugal – development of digital competence for all ages of education
- Singapore – supports research and experimentation with 5G while waiving spectrum fees
- UK – Girls First and She Means Business to encourage digital skills development for girls and women
- WEF – In China, will convene insurance companies and manufacturers of IoT devices to agree to standards and a way forward
- Intervale – Focus Group on Digital Financial Services brought together all stakeholders to discuss issues in this area

Road Ahead

Overall, there are a number of opportunities to learn from governments and all stakeholders. Key issues continue to be how to ensure trust, privacy and data protection while enabling innovation, education and growth. A lot has been done, but as emerging technologies and 5G roll out there is a need to ensure that countries that are at varying degrees of development in their own digital economies take advantage of all opportunities.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Singapore

Mr Leong Keng Thai, Deputy Chief Executive, Infocomm Media Development Authority

“Growing the Digital Economy”

Mr Chairman
Mr Secretary-General
Honorable Ministers
Excellencies
Ladies and Gentlemen,

Singapore would like to first express our utmost appreciation to the International Telecommunication Union (ITU) and the various United Nations agencies for their efforts in bringing together the different stakeholders for the World Summit on Information Society Forum 2017. With today’s rapid pace of digitalisation, it has become ever more crucial for governments and the various stakeholders to work together to ensure that the most appropriate policies are put in place to enable everyone to reap the benefits of the Digital Economy.

Digitalisation is one of the most seismic changes of our time. If harnessed well, the Digital Economy promises many exciting opportunities for the bold and enterprising, from small merchants providing their products and services to the world through e-commerce platforms, freelancers contributing their skills to crowdsourced projects, to vibrant start-ups aiming to be the next Google or Baidu.

Success in Digital Economy as a key pillar of Singapore’s Smart Nation Vision

The Digital Economy has seen tremendous growth over the last few years and is affecting countries regardless of their state of development. In Singapore, we believe that our ability to succeed in the Digital Economy is integral to our Smart Nation Vision. We have always looked at Information and Communications Technology or ICT as a key driver of growth given our limited resources. To harness the full spectrum of benefits from the Digital Economy, we have to ensure that technology brings about sustainable and inclusive growth – where every business, worker and citizen can be transformed, empowered and connected by technology.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

To sustain the growth of the Digital Economy, Singapore believes that governments must and can co-create the digital future with their businesses, people and community. This can be achieved through open and progressive regulatory frameworks and future-ready connectivity infrastructure that spurs new services, supports positive disruptions and enables new business models. While governments take into account incumbents who have to operate within existing regulatory guidelines, flexibility must be provided to allow new players with disruptive technologies and business models to flourish.

Regulatory sandboxing is one such initiative where Singapore hopes to spur innovative policy-making. The Monetary Authority of Singapore (MAS) has launched a regulatory sandbox for financial institutions and FinTech players. The aim is to provide a conducive space where certain regulatory requirements are relaxed so that firms have some leeway to test out their innovations. Currently, PolicyPal, a Singapore-based insurance startup, have come on board to test their product through a partnership with insurance providers.

Further, a key enabler of Singapore's digital vision is pervasive connectivity delivered through ICT infrastructure that is fast, reliable, and secure. As early as 2006, Singapore invested in a national fibre network, which offers one of the world's fastest broadband speeds at affordable prices. Today, a 1Gbps broadband plan cost as low as US\$28 per month while a 10Gbps plan cost just over US\$130.

The Infocomm Media Development Authority (IMDA) also recently kick-started industry consultations to seek feedback and ideas on spectrum requirements of 5G late May this year. We hope to get industry's views on 5G spectrum requirements and regulatory provisions, and on how policies can move in tandem with technology and address the industry's needs. IMDA will also waive frequency fees for 5G trials to lower the regulatory barrier and to encourage industry trials in 5G technology.

We have also invested in a pervasive public wifi - *Wireless@SG* - that offers free and fast Internet access in public locations all over the island. Last month, IMDA has enhanced *Wireless@SG* to enable automatic login for non-SIM devices such as tablets and laptops. With this enhancement, users can connect to *Wireless@SG* more conveniently, without having to key in your username and password.

To reshape itself for the future, Singapore has developed the Committee for Future Economy Report outlining several strategies spanning across the areas of building deep digital capabilities and skills, innovation and the transformation of sectors.

As Small and Medium Enterprises (SMEs) make up more than 90% of our economy, we are seeking to help our SMEs to use technology to leapfrog, digitalise and thrive in the digital age. We are developing industry transformation maps (ITMs) for 23 sectors to address issues within each industry and deepen

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

partnerships between Government, firms, industries, trade associations and chambers. Through this, we hope to provide stronger support for innovation and internationalisation for our companies.

Having new and re-designed jobs is also a desired outcome from the ITMs. Human capital is our key asset. In Singapore, the question we face beyond the availability of jobs, is the kind of jobs and whether these can meet the aspirations of our people. As such, as we strive towards being a Digital Economy, we also encourage our people to acquire ICT expertise and skills through the TechSkills Accelerator initiative, designed to develop a skilled ICT workforce and enhance employability outcomes by supporting individuals in training and job placement facilitation.

In the months to come, we will also be launching a Skills Framework for ICT professionals. So far, about 80 ICT skills have been identified by the industry and we envision that the Skills Framework can be used by hirers to develop career maps and articulate job requirements, by individuals to guide their development to stay relevant and by training providers to devise ICT courses.

Harmony and Inclusivity in a Digital Society

The second pillar that makes up a Smart Nation is a Digital Society. We believe that no one should get left behind as we move into a Digital Economy. Hence, equipping our people with the ability and agility to adapt, learn and prepare for a digital world is a continuous effort, even from young. Our Digital Maker Programme, for instance, provides entry-level codable microcontrollers known as the micro:bit to inspire both students and adults to explore the possibilities of digital making. Through initiatives such as this, we aim to nurture a new generation of digital natives, empowering them to be creators and makers with tech and media, so as to cultivate real-world problem solving, encourage digital creativity and innovation.

At the same time, we must also not forget the needy and less fortunate. To empower them, Singapore has introduced various digital inclusion programmes for low-income, needy families, persons with disabilities as well as the elderly. For example, the Home Access Programme provides affordable broadband bundle package to low-income households. As for our seniors, we have the Silver Infocomm Initiative, that is meant to promote IT awareness and literacy so that seniors can be actively engaged in the digital age.

Above all, we believe that our people, businesses and organisations must have the fundamental mindset that technology can make a big difference to us, and we have the right people at every level – leaders, managers, promoters and people who may not be in professions related to ICT, but with sufficient appreciation of technology in order to harness its benefits. At the fundamental level, it is the ethos of the society, we need to be forward looking, prepared to change and be able to have open conversations about the challenges we face and how to solve them.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Digital Government

The last pillar in our stride towards a Smart Nation is a truly Digital Government. Even for a small city state like Singapore, we have found that it takes effort to have industry sectors and regulators come together to synergise policies and initiatives with the same national agenda.

We have also undergone changes to the way we work, from restructuring and the formation of new agencies, to internal reorganisations to better meet the challenges of the digital economy and to guide the development of our Smart Nation. For example, the Infocomm Development Agency had merged with the Media Development Agency to form the Infocomm Media Development Agency on 1 October 2016 so as to enable Singapore to seize the new opportunities in the converged infocomm media landscape.

To enable the Singapore Government to be more integrated and responsive in our strategy and processes for Smart Nation and Digital Government, Singapore has also formed the Smart Nation and Digital Government Group (SNDDG), comprising the Smart Nation and Digital Government Office (SNDGO) and GovTech recently. These organisations come under the Prime Minister's Office to ensure that there is a whole-of-government strategy and implementation of a Digital Government.

All these changes are necessary and reflective of the need for governments to be agile, in order to react and respond quickly to changes in the operating environment.

Trust and security in the Digital Economy

Trust is an important bedrock upon which a successful Digital Economy functions. Data has become the lifeblood of the Digital Economy. Increasingly, governments are using data to provide public services more efficiently and effectively, while businesses are collecting and analysing data to better understand customer behaviour, create personalised value propositions and improve operations. While consumers appear to be the biggest beneficiary, there are mounting concerns about the misuse of digital data. Establishing public trust is therefore essential. This means upholding high standards of data protection. As the Digital Economy expands, we must also enhance cybersecurity, so that cyber-attacks do not undermine trust in the Digital Economy. Cyber security is an overarching consideration that will have an impact on the success of our digitalisation efforts. The IMDA, working with the Cyber Security Agency (CSA) has embarked on various initiatives to strengthen and uplift our cyber security posture and readiness to better prepare ourselves to meet the evolving cyber threat landscape.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The other challenge is how to facilitate the beneficial use of data but at the same time ensure adequate protection against its misuse, especially personal and sensitive data. There is a need for frameworks to protect personal data and intellectual property. In turn, this will facilitate the building of greater trust and confidence which is vital to the greater sharing and use of data. Singapore's Personal Data Protection Act (PDPA) requires a comparable standard of protection for personal data that moves outside of Singapore. At the same time, it also sets out various avenues for an organisation to legitimately transfer personal data overseas.

Conclusion

For us to reap the full economic benefits of the Digital Economy, we need to work together to tackle the challenges that digitalisation brings and WSIS Forum is well-placed to ensure that such discussions and sharing of best practices in the implementation of WSIS outcomes continue. Singapore does not have all the answers, but we hope that by sharing with you our experience, we can harness the immense growth potential of the digital economy to achieve sustainable development for all.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION ELEVEN: Building Confidence and Security in the Use of ICTs

High-Level Track Facilitator (HLTF): Ms Brenda Aynsley, Chairman IP3 ACS Fellow and Honorary Life Member, CP, International Federation for Information Processing (IFIP)

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Mr. Reinhard Scholl, Deputy Director, Telecommunication Standardization Bureau
3. **Ukraine** – Mr. Leonid Yevdochenko, Chairman, State Service of Special Communications and Information Protection of Ukraine
4. **India** – Ms. Aruna Sundararajan, Secretary, Ministry of Electronics & Information Technology
5. **Mexico** – Mr. Eber Betanzos Torres, Viceminister of Public Administration
6. **International Federation for Information Processing** – Prof. Mike Hinchey, President (Austria) (Represented by Dr. Yuko Murayama, Vice President)
7. **Asia-Pacific Telecommunity (APT)** – Ms. Areewan Haorangsi, Secretary General (Thailand)
8. **Association for Proper Internet Governance** – Dr. Richard Hill, President (Switzerland)
9. **Systemics-PAB** – Ms. Anna Szóstak, Deputy CEO and Commercial Proxy (Poland)
10. **Microsoft** – Mr. Jan Neutze, Director of Cybersecurity Policy, Microsoft EMEA

Introduction

- Cybersecurity is becoming central to technology use and economic growth
- Confidence in the use of ICTs by business and community will be the limit or enabler to that growth
- More needs to be done to improve trust in both the technology and amongst the human actors. Trust is actually multi-disciplinary concept which includes not only our security but safety, reliability, and the usability.

Vision/Fresh Priorities

- Information security awareness becoming manifest

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Trusted threat intelligence sharing and collaboration are the best tools to fight cyber security
- Cybersecurity 'Geneva Convention'
- ICT professionals independently certified as to qualification, currency and ethical commitment to act in the public interest

Opportunities/Partnerships

- Governments as customers, governments as regulators
- Governments as defensive/offensive instruments in cyber attack
- Industry collectives working in the public interest to increase trust and grow business/the economy
- Cooperating international organisations in the regulation, standards and professional spaces can facilitate cross border issue identification and solutions

Key challenges

- Overcoming the degradation in trust that emerges with each cyberattack
- As a consumer you have no way of evaluating the security of the providers of the services you are using
- Reassuring cybersecurity is present, at every and each level – creation, maintenance and use of ICTs
- Continuous nature of building confidence and trust requires ongoing commitment to resourcing and enforcement. It never stops!
- Digital literacy is a prime motivator, the more you know the better you can protect yourself and contribute to the growth of the economy

Case Examples

- Uber or amazon holds your credit card detail, how safe is that?
- Wannacry ransomware came from government hacker toolkit
- Your phone is tracking your every move, on or off
- 3rd party independent certification authorities for professional practitioners

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Cross border trust in ICT infrastructure eg Ukraine collaboration with the EU
- Large scale projects of eGovernment, e-declaration system for official assets and public e-procurement system in nation states. Demonstrate the key elements of cooperation between state and Civil Society in the fight against corruption. Together with the adoption of best practices in electronic identification and electronic trust services.

Road Ahead

- A call on Governments to do more, to agree on a set of binding norms of nation state behaviour in cyberspace
- Governments to legislate for data breach reporting to assist consumers understanding risk and reward
- Develop a reference model for personal data protection guidelines
- Governments and Civil Society to really understand the contribution to each economy of the use of ICTs in terms of money, health, education, well-being and safety.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Ukraine

Mr. Leonid Yevdochenko, Chairman, State Service of Special Communications and Information Protection of Ukraine
Excellencies,

Distinguished delegates,

Ladies and Gentlemen,

It is a great pleasure and honour for me to be here today as an active participant to the WSIS Forum. I would like to thank Forum organizers for their tireless commitment, active assistance and generosity in hosting.

The important outcomes of the WSIS and WSIS+10 are supplemented annually with new ideas and decisions, which demonstrate the determination of all countries, including Ukraine, to contribute to further progress of the information society and maximize the benefits of ICT innovation for the prosperity of economies and states.

On behalf of the Government of Ukraine let me also express gratitude for the international support to Ukraine in pursuance of building the digital environment of confidence and security, bridging the digital divide, reaching the highest point of technological development of information and knowledge society.

I would also like to take this opportunity to brief you on key strategies for the information society development in Ukraine as well as cyber security challenges countered by Ukraine in hybrid war.

Distinguished colleagues,

Enabling the successful development of our State and demonstrating compliance with the international obligations assumed by Ukraine, representing overall results of involvement into the EU integration processes and evolution of secure information space, Ukraine is gradually implementing a package of reforms, restoring the economy and financial stability, overcoming corruption. Conclusion of the Association Agreement between the European Union and Ukraine, establishment of a free-trade zone and also introduction of visa-free regime with the EU are extremely important success criteria the way towards the United Europe.

Nowadays necessary large-scale projects for providing e-government platform are being implemented in Ukraine; thereby Ukraine's position in the ranking EGD I has been already increased by 25 points. Recently

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

launched e-Declaration system for officials' assets and public e-procurement system are the key segments of the cooperation between the State and the civil society in the fight against corruption.

Following the call of WSIS to develop appropriate national strategies and enforce the policy of ICT distribution, Ukraine gives special priority to the implementation of the best practices in electronic identification and electronic trust services, which are the basis for e-governance, e-medicine, e-commerce and other e-services, cross-border cooperation and improvement in the common level of network and information systems security. Development of digital technology, e-communications and e-services, building trust and security in the use of ICT, ensuring cyber security, confidentiality, privacy and personal data protection, enforcement of human rights guaranteed by advanced information society, all these strategic priorities are the basic concepts and essentials of the Digital agenda for Ukraine 2020, draft of which is being completed by joint efforts of the IT sector, the public and the State.

Ladies and Gentlemen,

Russia's violation of the international law, illegal annexation of Crimea, destabilisation of eastern Ukraine – these are only the visible spectrums of hybrid warfare against Ukraine. This war is the point of highest intensity in a wider Russia's conflict with the EU and the USA in which information space has become a major field of combat. Use of IT technologies for cyber-attacks, psychological pressure and information influence through propaganda and misinformation, became known as "fog of war", have been already experienced by some countries. Ukraine is currently withstanding threats of hybrid warfare, probably performing its historic mission to become a barrier to Russia on its way, to protect civilization from aggression and expansion of hybrid provocative technologies of the Russian Federation to the West.

Cyber security is an integral part of the national security of Ukraine. Ukraine actively adopts the best cyber defence practices, works together with such partners as the EU, the USA and NATO for strengthening international cooperation in this area, and also interacts with competent institutions around the world on protection from cyber threats. Ukraine develops a national cyber security system, following the UN statement on Internet access and adhering to the European principles of a public private partnership to provide open, free and safe cyberspace.

We believe that productive cooperation among all stakeholders of cyber security is the foundation and driving force for global cyber culture spread and development as well as for building trust and security in the information society. Professional engagement, interaction and persistent cooperation will bring the world closer to the era of global free and safe information and knowledge society.

I wish all participants success, new ideas and constructive solutions!

Thank you for your attention.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Asia-Pacific Telecommunity (APT)
Ms. Areewan Haorangi, Secretary General

Information and Communication Technology (ICT) has transformed modern lifestyles. It has provided us with real-time communications, borderless and almost unlimited access to information and a wide range of innovative services. ICT has become an integral tool and facilitator for social and economic development. The full potential of ICT can only be realized through a broadband digital economy that will stimulate sustainable economic growth and prosperity. Such an economy should be characterized by policy and regulatory regimes that support innovation, improve confidence and provide security for industry and people and establish a system that promotes investment in digital economy.

However, the successful implementation of the digital economy will firstly require the confidence of its stakeholders. The users, suppliers, investors and the governments need to have confidence in the use of ICT in our daily business and social interactions, and for the enhancement of livelihood without fear. We need to ensure that the ICT involved in digital economy is safe and secure to use. While providing broadband connectivity for all is an important aspect to provide ICT services, it is equally important to ensure that the use of ICTs is safe and secure to deliver the desired services.

It is prerequisite for the development of digital economy to enhance confidence and security in the networks. Guarding people from cyber-attack, hacking and spam mail, protection of personal information and privacy should be priorities in building the digital infrastructure. Further, in order to achieve benefit from digital economy, governments should be aware of needs to ensure legal environment for facilitating implementation of digital economy and preventing cyber-crimes over on ICT services. Additionally, appropriate protection should be ensured for intellectual property rights. Further, data sovereignty and protection of individual data has become an important concern in the context of digital economy.

Since the issues of confidence and security in the use of ICTs, most of which are interconnected by the Internet transcending geographical borders, this requires to be dealt with at the regional and international level. Cooperation among countries in the region and in the global context is necessary.

From WSIS 2003, APT has taken the building trust and security as one of its important issues. APT had organized Ministerial meetings every 4 – 5 years to provide high-level policy guidelines on the development of telecommunication/ICT and its critical role in enabling creative economy and socio-

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

economic development. Ministers had addressed this issue as an urgent and key priority issue in order to achieve sustainable development using ICT.

In 2009, in the Bali Statement of the Asia-Pacific Ministers on Strengthening Regional Collaboration towards a Broadband Economy in the Asia-Pacific, Ministers identified objectives that were crucial for a successful broadband economy in Asia-Pacific region. One of these objectives was: “to provide a secure, safe and sustainable environment through ICT initiatives”. Later in 2014, in Brunei Darussalam Statement adopted by the ICT Ministers from Asia-Pacific, “Trust and confidence in ICT” is one of the 6 key priority areas.

The current Strategic Plan of the APT for the period of 2015-2017 specifies that the safe and secure use of ICT devices and applications has been an area of significant importance and identifies a work item on “cyber-security” with associated strategic actions for the implementation. These strategic actions of the APT include:

- Assist members to collaborate to build and strengthen trust and confidence in the use of ICT so that the people can use ICT for their progress and prosperity without any concern;
- Encourage cooperation among governments and the private sector to address safety and cybersecurity;
- Assist members to develop cyber-legislation;
- Support Computer Emergency Response Team/Computer Security Incident Response Team (CERT/CSIRT) activities through close coordination and technical assistance in various forms, including developing relevant guidelines and recommendations;
- Assist Members in setting up CERT/CSIRT in countries which have no such institutions;
- Encourage increased exchanges and cooperation in anti-spam field by taking corresponding initiatives at the regional and national level;
- Encourage governments and other stakeholders to proactively take initiatives to increase the users’ awareness and capacity in online privacy protection;
- Enhance reliability and confidence in the use of ICT applications by helping Members to develop guidelines for the secure flow of information;

To convert the policy and plan into implementation, APT has several work programmes to serve its members.

Apart from having preparatory meetings to coordinate and facilitate regional position and views on major ICT issues for the world conferences, APT also organizes meetings to discuss ICT policy and regulatory issues, ICT development, etc. as well as capacity building programmes for APT members.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

From 2010, APT has been organizing APT Cybersecurity Forum (CSF) annually in order to provide platform for its stakeholders to discuss exclusively the issues of confidence and safe use of ICTs. We invited experts from other organizations to share knowledge and experience to tackle the issues of cyber incidences. The forum also includes the practical drill in such incidence. Participants from APT member countries also shared information on practical experiences, knowledge, and expertise on cyber security including public awareness. Last year, the CSF-7 focused on this emerging trend with the theme "Emerging Trend: IoT, Big Data and Security".

Further, the issues of confidence and safety features of ICTs have been addressed in APT Policy and Regulatory Forum (PRF) organized at the regional and sub-regional level.

In addition, APT had started a Joint Research on Personal Data Protection with KISA (*Korea Internet & Security Agency*) in 2016. We think that the research is necessary to understand the current situation of, and to promote cooperation on personal data protection among APT members. Last year the research was for collecting information on laws on personal data protection from 10 member countries. This year, we are going to expand to cover all 38 member countries. We expect to develop a reference model for personal data protection guideline for APT member countries.

I believe other regional organizations are also having similar initiatives and activities in these aspects. We now know the wide spread roles of the regional organizations like APT, Arab Group, ATU, CEPT, CITEL and RCC in developing regional interest and proposals in the major ITU conferences like PP, WRC, WCIT, WTSA and WTDC. The collaborative approach taken by these regional organizations has facilitated the work of those conferences to a great extent.

In that context, I believe that the combined efforts and initiatives by these regional organizations together ITU will accelerate the work of implementation ITU's Global Cybersecurity Agenda. I believe the regional issues will be well understood and taken by the regional organizations and all will work together under the umbrella of ITU without duplicating the efforts. With collaborative efforts, a safe and secure ICT will be the key facilitator for achieving the 2030 Agenda for Sustainable Development.

Thank you for your attention.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Association for Proper Internet Governance

Dr. Richard Hill, President

Security experts have long recognized that lack of ICT security creates a negative externality.¹¹ For example, if an electronic commerce service is hacked and credit card information is disclosed, the users of the service users will have to change their credit cards. This is a cost both for the user and for the credit card company. But that cost is not visible to the electronic commerce service. Consequently, the electronic commerce service does not have an incentive to invest in greater security measures.¹² Another, very concrete, example is provided by a software manufacturer's decision to stop correcting security problems in old versions of its software, with the consequence that a large number of computers were affected.¹³ The cost of the attack was borne by the end-users, not by the software manufacturer.

As the Global Internet Report 2016 of the Internet Society puts the matter¹⁴:

There is a market failure that governs investment in cybersecurity. First, data breaches have externalities; costs that are not accounted for by organisations. Second, even where investments are made, as a result of asymmetric information, it is difficult for organizations to convey the resulting level of cybersecurity to the rest of the ecosystem. As a result, the incentive to invest in cybersecurity is limited; organisations do not bear all the cost of failing to invest, and cannot fully benefit from having invested.

There can be little doubt that many organizations are not taking sufficient measures to protect the security of their computer systems, see for example the May 2017 attack¹⁵ that affected a large number of users and many hospitals.

¹¹ https://www.schneier.com/blog/archives/2007/01/information_sec_1.html ; a comprehensive discussion is given in pages 103-107 of the Global Internet Report 2016 of the Internet Society, see in particular the examples on p. 101. The Report is available at: <https://www.internetsociety.org/globalinternetreport/2016/>

¹² See also pp. vii and 66 of GCIG.

¹⁴ See p. 18 of the cited Global Internet Report 2016.

¹⁵ https://en.wikipedia.org/wiki/WannaCry_cyber_attack

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

As the European Union Agency for Network and Information Security (ENISA) puts the matter¹⁶: “Today we are seeing a **market failure for cybersecurity and privacy**: trusted solutions are more costly for suppliers and buyers are reluctant to pay a premium for security and privacy” (emphasis in original).

As noted below, the externalities arising from lack of security are exacerbated by the Internet of Things (IoT)¹⁷. As a well known security expert puts the matter¹⁸: “Security engineers are working on technologies that can mitigate much of this risk, but many solutions won't be deployed without government involvement. This is not something that the market can solve. ... the interests of the companies often don't match the interests of the people. ... Governments need to play a larger role: setting standards, policing compliance, and implementing solutions across companies and networks.”

Recent research shows that a perceived lack of security is reducing consumer propensity to use the Internet for certain activities.¹⁹

Some national authorities are taking some measures.²⁰ In particular, the President of the USA issued an Executive Order²¹ on 11 May 2017 that states:

[certain high officials will lead] an open and transparent process to identify and promote action by appropriate stakeholders to improve the resilience of the internet [sic] and communications ecosystem and to encourage collaboration with the goal of dramatically reducing threats perpetrated by automated and distributed attacks (e.g., botnets).

...

http://www.nhtsa.gov/About-NHTSA/Press-Releases/nhtsa_cybersecurity_best_practices_10242016 .

For a general approach see Directive (EU) 2016/1148 of the European Parliament and of the Council of 6 July 2016 concerning measures for a high common level of security of network and information systems across the Union, at:

http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=uriserv:OJ.L_.2016.194.01.0001.01.ENG&toc=OJ:L:2016:194:TOC

²¹ Presidential Executive Order on Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure, available at: <https://www.whitehouse.gov/the-press-office/2017/05/11/presidential-executive-order-strengthening-cybersecurity-federal>

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

As a highly connected nation, the United States is especially dependent on a globally secure and resilient internet [sic] and must work with allies and other partners toward maintaining the policy set forth in this section.

ENISA is recommending²² the development of “So called **baseline requirements** for IoT security and privacy that cover the essentials for trust, e.g. rules for authentication / authorization, should set **mandatory reference levels for trusted IoT solutions.**” And it is recommending that the European Commission encourage “**the development of mandatory staged requirements for security and privacy in the IoT, including some minimal requirements.**” (Emphases in original)

Despite those national or regional initiatives, at present, there does not appear to be adequate consideration of these issues at either the national (in many countries) or international levels.

We recommend to invite IETF, ISOC, ITU, UNCITRAL, and UNCTAD to study the issue of externalities arising from lack of security, which has technical, economic, and legal aspects. In particular, UNCITRAL should be mandated to develop a model law on the matter.

Further, as stated by the President of a leading software company (Microsoft)²³:

The time has come to call on the world’s governments to come together, affirm international cybersecurity norms that have emerged in recent years, adopt new and binding rules and get to work implementing them.

In short, the time has come for governments to adopt a Digital Geneva Convention to protect civilians on the internet.

...

... governments around the world should pursue a broader multilateral agreement that affirms recent cybersecurity norms as global rules. Just as the world’s governments came together in 1949 to adopt the Fourth Geneva Convention to protect civilians in times of war, we need a Digital

²² Sections 2.1 and 2.3 of <https://www.enisa.europa.eu/publications/enisa-position-papers-and-opinions/infineon-nxp-st-enisa-position-on-cybersecurity>

²³ <https://blogs.microsoft.com/on-the-issues/2017/02/14/need-digital-geneva-convention/#sm.00017arazqit2faipqg2lyngzmx4>

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Geneva Convention that will commit governments to implement the norms that have been developed to protect civilians on the internet in times of peace.

Such a convention should commit governments to avoiding cyber-attacks that target the private sector or critical infrastructure or the use of hacking to steal intellectual property. Similarly, it should require that governments assist private sector efforts to detect, contain, respond to and recover from these events, and should mandate that governments report vulnerabilities to vendors rather than stockpile, sell or exploit them.

In addition, a Digital Geneva Convention needs to create an independent organization that spans the public and private sectors. Specifically, the world needs an independent organization that can investigate and share publicly the evidence that attributes nation-state attacks to specific countries.

While there is no perfect analogy, the world needs an organization that can address cyber threats in a manner like the role played by the International Atomic Energy Agency in the field of nuclear non-proliferation. This organization should consist of technical experts from across governments, the private sector, academia and civil society with the capability to examine specific attacks and share the evidence showing that a given attack was by a specific nation-state. Only then will nation-states know that if they violate the rules, the world will learn about it.

In a press conference on 11 May 2017²⁴, the official presenting the cited US Executive Order²⁵ stated:

... I think the [security] trend is going in the wrong direction in cyberspace, and it's time to stop that trend We've seen increasing attacks from allies, adversaries, primarily nation states but also non-nation state actors, and sitting by and doing nothing is no longer an option.

...

... [several] nation states are motivated to use cyber capacity and cyber tools to attack our people and our governments and their data. And that's something that we can no longer abide. We

²⁴ <https://www.whitehouse.gov/the-press-office/2017/05/11/press-briefing-principal-deputy-press-secretary-sarah-sanders-and>

²⁵ Presidential Executive Order on Strengthening the Cybersecurity of Federal Networks and Critical Infrastructure, available at: <https://www.whitehouse.gov/the-press-office/2017/05/11/presidential-executive-order-strengthening-cybersecurity-federal>

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

need to establish the rules of the road for proper behavior on the Internet, but we also then need to deter those who don't want to abide by those rules.

Following the WannaCrypt attack²⁶ in mid-May 2017, Microsoft reinforced its call for action, stating²⁷:

Finally, this attack provides yet another example of why the stockpiling of vulnerabilities by governments is such a problem. This is an emerging pattern in 2017. We have seen vulnerabilities stored by the CIA show up on WikiLeaks, and now this vulnerability stolen from the NSA has affected customers around the world. Repeatedly, exploits in the hands of governments have leaked into the public domain and caused widespread damage. An equivalent scenario with conventional weapons would be the U.S. military having some of its Tomahawk missiles stolen. And this most recent attack represents a completely unintended but disconcerting link between the two most serious forms of cybersecurity threats in the world today – nation-state action and organized criminal action.

The governments of the world should treat this attack as a wake-up call. They need to take a different approach and adhere in cyberspace to the same rules applied to weapons in the physical world. We need governments to consider the damage to civilians that comes from hoarding these vulnerabilities and the use of these exploits. This is one reason we called in February for a new “Digital Geneva Convention” to govern these issues, including a new requirement for governments to report vulnerabilities to vendors, rather than stockpile, sell, or exploit them.

We recommend to invite the UN General Assembly to consider the appropriate ways and means to convene a treaty-making conference to develop and adopt a binding treaty on norms to protect civilians against cyber-attacks, in particular on the Internet, in times of peace, and to consider whether to develop a new treaty, or whether to invite the ITU to integrate such norms into its own instruments, for example the International Telecommunication Regulations.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Internet of Things (IoT)

In the current environment, it can be expected that networked devices (the so-called Internet of Things – IoT)²⁸ will transmit data to manufacturers and service providers with little or no restrictions on the use of the data.²⁹ The recipients of the data could then correlate the data and resell it, as is currently the case for data collected by so-called free services such as search engines. Further, national surveillance programs could acquire such data and use it to construct profiles of individuals.

Such uses of data that are collected automatically for a specific purpose could have wide-reaching and unforeseen consequences.³⁰

Further, interconnected devices may make decisions affecting daily life,³¹ and this may call for the development of a regulatory framework to protect the interests of citizens. In particular, the issue of product liability may require changes to existing legal regimes.³²

Increasingly, the safety of IoT devices will be affected by their security.³³ Thus, the security risks³⁴ posed by interconnected devices may require government actions.³⁵ For example, there may be a need to

²⁸ A good overview of the technology, and the issues it raises, can be found at:

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

provide incentives to those who make interconnected devices to make them secure: such incentives might be penalties for failure to build-in adequate security³⁶. In this context, it is worth considering past experience with various devices, including electrical devices: they all have to conform to legal standards, all countries enforce compliance with such standards. It is not legitimate to claim that security and safety requirement stifle technological innovation. It must be recalled that the primary goal of private companies is to maximize profits. The purpose of regulation is to prevent profit-maximization from resulting in the production of dangerous products. As IBM Resilient Chief Technology Officer Bruce Schneier puts the matter³⁷, cybersecurity risks associated with the IoT require governmental intervention, as “the market is not going to fix this because neither the buyer nor the seller cares”.

Since IoT products will be interconnected, at least to some degree, chaos can ensue if the products are not sufficiently secure³⁸ (e.g. all medical systems fail to work). Thus it is important to ensure that the products are sufficiently secure for mass deployment.

This is not a theoretical consideration. Insufficiently insecure IoT devices have already been used to perpetrate massive denial of service attacks, and such attacks could be used to bring down critical infrastructures.³⁹ As one security manager put the matter⁴⁰: “In a relatively short time we’ve taken a system built to resist destruction by nuclear weapons and made it vulnerable to toasters.” A thorough study of the matter, which identifies gaps and contains recommendations for remedial actions, was published on 8 February 2017 by ENISA, see:

<https://www.enisa.europa.eu/publications/enisa-position-papers-and-opinions/infineon-nxp-st-enisa-position-on-cybersecurity>

⁴² <http://www.itu.int/rec/T-REC-Y.3013-201408-I/en>

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION TWELVE: Applications and Services, Digital, Economy and Trade, Climate Change

High-Level Track Facilitator (HLTF): Mr. Shernon Osepa, Regional Affairs Manager for Latin America & The Caribbean Bureau, Internet Society (ISOC)

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator:** Dr Cosmas Zavazava, Chief of Department, Projects & Knowledge Management, BDT, ITU
3. **Indonesia** - H.E. Mr. Samuel Abrijani Pangerapan, Deputy Minister, Ministry of Communication and Information Technology
4. **Mexico** – Ms. Yolanda, Martinez Mancilla, Chief of the Digital Government Unit, Ministry of Public Administration
5. **MEDICI Framework of Cooperation** – Prof. Alfredo M. Ronchi, Secretary General (Italy)
6. **Subah Infosolutions** – Mr. Birendra Sasmal, Chief Executive (Ghana)
7. **World Summit Award** – Mrs. Nora Wolloch, Manager (Austria)
8. **CYBERLAW ASIA** – Mr. Pavan Duggal, President (India (Republic of)) (Digital, Economy and Trade)
9. **Research ICT Africa/ University of Cape Town** – Prof. Alison Gillwald, Executive Director, Professor (South Africa (Republic of)) (Enabling Environment)
10. **Earth Aid** – Mr. Syed Tarek, Founder (United Kingdom of Great Britain and Northern Ireland) (Climate Change)

Introduction

- ICTs applications form the basis for (economic and social) development
- If used in smart ways successful businesses(trade) can be conducted through ICTs,
- But, there are risks involved as well, that's the reason online users should be aware of these risks
- It's not enough just to be aware of these risks but concrete measures should be undertaken to ensure that assets (both material and intellectual) are secured
- We only have one planet, while focusing on technological development, measures should be taken to preserve this one natural and scarce resource called: the world

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Vision/Fresh Priorities

- More people need to be connected to the Internet and to take full advantages of ICTs
- Globally seen, still 57 percent of the population is not connected
- The telecommunications infrastructures (wired, wireless, satellite) should be protected to ensure reliable communications
- Business and research skills should be taught in order for new entrepreneurs to be formed especially in developing countries
- Technological developments (IoT) should be used to protect the world regarding climate change and to detect possible disasters beforehand
- Continues education is necessary to equip citizens to cope with today's world challenges

Opportunities/Partnerships

- Emerging technologies (with special focus on IoT) can be used to transform all sectors, especially in developing countries;
- IoT can be used to detect natural disasters beforehand in regions that are vulnerable;
- Focus must be on how to develop new businesses and to generate income;
- We need to move away from the consumers' mentality and to think as entrepreneurs;
- Local content development should be promoted;
- Education focusing on reducing of illiteracy should be promoted;
- Awareness regarding climate change and its consequences for the future of the world should be raised;
- All stakeholders such as Governments, Private sector, Academia, Civil society all should work together to address challenges of mutual interests;
- Global cybersecurity strategies should be explored to avoid national governments drafting national laws, that can harm fundamental human rights.

Key challenges

- Investment in ICTs infrastructures
- Cybersecurity
- Trust in the Internet to conduct e-commerce
- Development of local content
- Protection of the planet (climate change)

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Case Examples

- Indonesia,
 - Infrastructure development;
 - Data and privacy protection laws;
 - several access projects in rural areas;
 - cybersecurity initiatives;
 - reduction of illiteracy;
 - Digital Economy through SMEs (Small Medium Enterprises)
- Mexico, focusing on a state of the art telecommunications network, which should become the base for all kinds of economic and social developments

Road Ahead

- Education and awareness on all the topics (Business, Digital, Economy and Trade, Climate Change) are necessary.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

MEDICI Framework of Cooperation

Prof. Alfredo M. Ronchi, Secretary General

The WSIS Forum is the key forum for discussing the role of ICTs as a means of implementation of the Sustainable Development Goals, is there any relevant ICT sector not yet adequately taken into account?

If we consider ICTs as powerful means to implement SDGs we must include and adequately take into account ICTs applied to safety and security in a broad sense, they are relevant part of SDGs as outlined many times both within the UNGA Overall WSIS Review and the UNDP

2030 Agenda for Sustainable Development SDGs.

A number of SDGs are tightly connected or rely on safety and security: SDG 2, SDG3, SDG6, SDG7, SDG8, SDG9, SDG11, SDG16, SDG17. Some of the specific fields are: food & water security, human security, safety, critical infrastructure resilience, drugs security and more.

Safety and security are integral part of human rights as well; we must provide all the efforts in order to guarantee such rights (as stated in art 3, 22, 25 - The Universal Declaration of Human Rights).

Nowadays the demand for "safety & security" in all its forms has increased, especially quantitatively and qualitatively, making clear the need for new approaches to enable the entire sector to ensure better results.

Looking from a different perspective: we outline the role of ICTs in risks assessment and management. They are playing key roles in a number of "risky" scenarios from health and children abuse to homeland security and law enforcement, crimes, trafficking (humans, drugs, weapons, artefacts, etc.) and even safety on working places and mobility.

Internet of things, machine learning, grids, network of sensors, remote sensing as well as near field communication and, why not, unmanned vehicles glued by networking are some of the building blocks of safety and security in different fields.

Of course technology it is not enough to solve problems, it is well known and demonstrated that a holistic, interdisciplinary approach and a culture of "safety & security" are the basis in order to obtain good results in this area.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

How can WSIS better support these issues?

We hope that WSIS will act as a global reference point for all those working in these sectors and those who may take advantage from their outcomes.

We must promote an interdisciplinary approach and a “culture” of safety & security, they are the basis in order to obtain good results in this area; foster the exchange of experiences and best practices among countries and promote research thanks to the WSIS.

On the occasion of previous editions of the WSIS Forum (e.g. 2014, 2015, 2016) some eminent speakers underlined the key-role played by ICTs on the occasion of natural disasters and other critical events, they said that cyber technologies have fuelled the hope of people affected by the natural disaster. The availability of low price high performance devices and the proactive activity of clever developers have boosted the production of a number of smart solutions spread in different countries all-over the world. Due to the actual “silos” segmenting these sectors it is quite difficult to have a comprehensive vision on these resources and success stories, there is a need for a holistic approach and best practice sharing.

We suggest to establish in the WSIS framework a global observatory on ICTs for safety, security and disaster recovery and to extend the scope of action line C5 “Building Confidence and Security in the Use of ICTs” or create an additional action line devoted to ICTs for safety, security and disaster recovery;

In conclusion I would like to stress the positive effects due to the WSIS process and its outcomes, and suggest to include and to promote a wider range of “security” topics under the WSIS umbrella endorsing a holistic approach to the “Safety, Security, Disaster Recovery and Management” sector.

World Summit Award
Ms. Nora Wolloch, Manager

The World Summit Award is part of the WSIS initiative since the opening evening in Geneva since 2003. How has this initiative contributed to actionline C7 over the past 14 years and what are the plans until 2025?

Thank you!

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The World Summit Award is unique in a number of ways.

Firstly, it was initiated even before the Action Lines were written, right here in Geneva at the first conference of the World Summit on the Information Society in December of 2003, initiated by the Republic of Austria.

WSA's objective was then and is today to focus on an aspect of WSIS which is often overlooked, if not ignored: the importance of content. WSA implements action line 7 by demonstrating the richness and diversity of e-applications and digital content from around the world.

This makes WSA also unique. It is a civil society initiative and it operates in 178 UN member states and does so in a democratic global contest.

WSA invites every year all UN member states to reach out to their local networks and we receive nominations of the best digital application and interactive contents in the global contest.

Following the UN principle each country nomination has the same weight in the contest and WSA provides each year a unique overview how creative producers, start-ups and social entrepreneurs use ICT to tackle the SDGs and action line C7.

WSA works with and through a global network of volunteers, representing us locally currently in 178 UN member states.

The 8 WSA categories reflect the C7 eApplications directly and include business & commerce, government & participation, learning & education, health & well-being, environment & green energy, culture & tourism, smart settlements & urbanization and inclusion & empowerment.

WSA addresses the digital divide not in terms of access – but focusses on the content divide and the gender divide, the social divides, the knowledge divides. There are still many countries, with almost no quality local content in local language.

WSA focusses on content driven innovation in digital solutions and applications and highlights the importance of local content, developed locally for local communities.

We also make sure that we have in all steps in the WSA yearly process a balance in regions, professional background and gender and all that in a transparent and democratic manner.

In the past years WSA experienced that the most innovative solutions often were submitted from young social entrepreneurs and tech-startups. Therefore we also want to communicate their needs and support them with network, skills, visibility and credibility.

To provide them with a platform of knowledge transfer and social franchising WSA organizes international events and activities to connect them with mentors, jurors, speakers, experts, government leaders, academia and civil society.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

They learn from each other, find new usecases for invented technology in other regions or start to cooperate to have an even stronger impact.

These young entrepreneurs demonstrate each day that ICTs are a powerful tool to implement the SDGs. But technology is only a tool – networks have to be built, sustainable business models created in a time where no one is ready to pay for content and multi-stakeholder partnerships developed.

On Monday we had a workshop with 4 of our recent winners here at the WSIS and featured their best-practice solutions. None of them asked for funding, but partnerships and networks to make sure that the right people use the resources they provide.

Technology without high quality content is useless and applications that don't solve a real societal issue as well– so join WSA to make sure that we share best-practices and learn from each other and build a smart and inclusive knowledge society.

Research ICT Africa/ University of Cape Town
Prof. Alison Gillwald, Executive Director, Professor

The policy challenge in Africa is to address the paradox that as we increase ICT access and use so digital inequality is amplified. While the provision of access to the internet remains a key public policy issue —a necessary condition of digital participation in the economy and society — it is not a sufficient condition for digital equality. Connectivity alone does not reduce information inequality. Even where enabling environments conducive to investment have been created for the extension of networks, the limited demand-side data available in Africa illustrates how the socially and economically marginalised – particularly those at the intersections of class, gender, race or ethnicity – are unable to harness the Internet to enhance their social and economic wellbeing.

For these reasons addressing digital inequality can no longer be viewed as a supply-side, infrastructural issue alone. Supply-side assessments of the role and effects of internet reflected in the digital divide discourse and expressed in policy objectives of affordable access to communications are no longer sufficient. Measuring progress in terms of the economic value in growth indicators that mask inequality will also not create the conditions for sustainable development. The demand-side value of infrastructure development recognises the value generated by information infrastructure as inputs into a wide range of productive processes. The outputs not only produce economic value but public and social goods that benefit society. As we have shifted globally from public utility to private provisioning of communications infrastructure we have increasingly ignored these beneficial outputs in policy, focusing only on outputs with appropriable returns. We need to shift this consumptive lens to one that includes production, and from technological deterministic policy approaches to a rights-based understanding of the role of internet if critical resource management is to be transformative.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

To redress digital inequality far more attention will need to be paid to demand stimulation measures. The limited demand-side data available on the continent shows that besides affordability, human development – particularly education and therefore income – are the primary determinants of access, intensity of use, and utility of internet. The development of relevant local content in local languages and applications, the enhancement of citizens' e-literacy are all important demand stimulants. But until fundamental inequalities off-line are addressed they will be replicated and indeed, amplified on-line.

Nor can public policy have a narrow sectoral focus any longer. Information and communication technologies (ICTs) cut across modern economies and societies. Policy formulation needs to deal with the internet as a general-purpose technology, a cross-sectoral issue, necessary for effective citizenry and economic engagement.

Although not explicit, these imperatives underlie the SDGs and inform the imperative of SDG9 ICT target of universal internet access by 2020. The problem is that to measure this at the global level we are forced to deal with the patchy, outdated, supply-side data that are unable to measure digital inequality in the predominantly prepaid mobile markets in developing countries. Further, from a policy point of view, the optimal points of policy intervention are context specific and to be effective need to be located in the political economy of the country. The truth of the matter is that across the Global South we do not know where we stand now, nor can we ascertain if, and when, we will have progressed toward the goals and targets of the SDGs. What we do know with the high-level supply-side data available is that at the speed with which we are connecting people to the Internet today, we can never meet the 2020 target and the lag will continue to be from Global South, and Africa in particular.

This reality calls for innovative policy that understands the need for a new interplay between state and market with new access, service delivery, investments and risk models that leverage community know-how and low cost technology innovations. It will require even greater regulatory agility and insight to manage the tensions between the different policy objectives of competitive efficiency, innovation and consumer welfare, and the safeguarding of public and social value of the Internet.

To get Africa connected will require doing things differently from what we are doing now. We need to explore alternative policy and regulatory interventions that do not assume mature, competitive, effectively regulated markets operating within guaranteed human rights frameworks – though of course we may continue to aspire to these. Recognizing the constrained institutional endowments and resources generally that exist in African countries, we need to identify multiple strategies across the ICT ecosystem that will enable Africa to reach the critical mass and intensity of use needed for the network effects associated with broadband expansion.

What might these include? Consider just two possible game changers. Build the public statistics that are missing in most African countries to inform an evidence base for policy making. This cannot be based on narrow, unaudited administrative data, extracted under conditions of extreme information asymmetry from operators by regulators as in the past. In this increasing complex and dynamic environment, it requires leveraging all existing and anticipated data, particularly aggregated, anonymised big data for public policy and planning.

Starting with an open data framework, a governance framework for the management of complementary supply-, demand-side and big data in a transparent and accountable way that is available for individual,

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

collective, public and private use – a traditional public good; non-rivalrous, non-exclusionary needs to be developed. This would unleash information flows and enable knowledge-building and innovation in many of our countries where national ICT statistics either do not exist – or are held secretly by national statistical offices, regulators and private companies. If governments recognise the high value of data and data analytics in the information age, they could better direct universal access obligations to provisioning of this data in usable formats by operators. This would be far better rather than adding to the cost of communications with secondary taxes that are historically poorly administered, and where expended have supported often extremely profitable companies by extending their businesses into so-called uneconomic areas. Funds, if they exist, though they should not necessarily be created for this purpose with their intractable inefficiencies, could also be better used to support low cost access solutions identified in the second area of intervention proposed – spectrum.

The critical resource for internet expansion in Africa in most jurisdictions is locked into technologically determined licenses – even when referred to as technologically neutral – or in ideologically constrained notions of state or national resources rather than public resources. In most of our countries, most of the spectrum is largely unused outside of the main metropolitan areas. In the sharing-economy of the internet era, we are already seeing voluntary infrastructure sharing by operators. G5 essentially operates within a spectrum sharing environment with data off loads on to proprietary and open public wi-fi. From a critical resources management perspective, this should be embraced by governments. Enabling secondary spectrum use would enable new dynamic spectrum sharing, which operates at a fraction of the cost of GSM network to be deployed on new business models in the largely unused spectrum in rural areas, which could instantly provide low cost, high quality bandwidth there.

Accepting that large numbers of Africans will not be able to afford to be optimally online even if GSM broadband prices were cost-based, deploying spectrum to create and extend the Commons (unlicensed spectrum) would be a key enabler. Extending commercially available public wi-fi from elite urban areas, possibly through deploying poorly utilised universal service funds or other public resources to all public spaces, is a way of increasing the intensity of use in urban areas and enhancing network effects that would contribute to more inclusive digital development.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Earth Aid
Mr. Syed Tarek, Founder

Excellences, Distinguished WSIS delegates, colleagues, stakeholders, ladies and gentlemen, it is a great honour and pleasure to be a part of the WSIS Forum 2017.

On behalf of Earth Aid, I would like to thank the organiser (the ITU) and co-organisers (UNESCO, UNCTAD and UNDP) of the WSIS Forum 2017. WSIS continues to be a leading forum to bring together stakeholders and share the best practices around the globe. I also congratulate this year's WSIS Prize winners and also

all the nominated projects. These are lenses through which we can see the progress we are making in ensuring our next generations have a better and brighter future.

In 2015, we witnessed the historic Paris Agreement, and within two years now 195 UNFCCC members have signed the agreement and out of them 148 have ratified it. The Paris Agreement was a monumental achievement, and it demonstrated the world cares about the growing concerns of climate change and its impact. On June 1, 2017, we have also come to know the US will be withdrawing from the agreement. With the withdrawal, the US will be joining three other UNFCCC member states Holy See, Nicaragua and Syria who are non-signatories of this agreement. To the non-signatories, on behalf of Earth Aid, I would like to forward that, the climate change is real, it is happening, and it is going to make a profound impact on our environment. We need to act on it before it is too late.

Earth Aid was primarily set up to collaborate in achieving UN-SDGs. Since its inauguration, we are running innovative projects to deal with climate change impact. We live in a world where 775 million adults are illiterate and another 152 million children will soon join with the existing illiterates because they aren't attending school. It is a monumental task to include them in developmental projects. At Earth Aid, we believe in bringing positive change to those. We are reaching out to those less literate population with our localised content and technology-enhanced training programmes.

From our field engagement in the developing region, various policy suggestions have emerged. These are:

1. Emphasis on the green energies and offer incentives to those who adapts those energies.
2. Work on improving infrastructures for power supply and connectivity in the rural areas.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

3. Strengthening the ties between the top-down management and bottom-up management in ensuring there is clear, concise communication between both tiers.
4. Make provisions to include climate change as a topic of discussion at all levels of academic engagement. Considering there are many drop outs after primary schooling, there needs to be a greater coverage of climate change in the primary school curriculum. This coverage should also include teaching basic lifesaving skills.
5. These exist countries where 'Technology literacy' is not clearly defined within their national policies, which is a barrier to any technological intervention in those countries. Such countries should consult with the private and public sector, local NGOs and learned societies to define what 'Technology literacy' means for them.
6. Promote inclusive education in all sectors of the academic engagement.

The potential of ICTs for achieving sustainable development is endless. As I write, there are almost as many mobile phone subscriptions (6.8 billion) as there are people on this earth (seven billion) with a subscription rate of 90% in the poorer countries. Earth Aid wants to promote that, disbursing the knowledge of climate change should be an international priority. We admit, it is a mammoth undertaking, but it is achievable.

Let's work together and take advantage of the global information and knowledge society to lead innovations and innovative ideas to bring a positive change within our national boundaries and beyond.

Thank you for your trust in me, in Earth Aid.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION THIRTEEN: Gender Mainstreaming

High-Level Track Facilitator (HLTF): Ms. Shuchita Thapar, Project Manager Cybersecurity Team, National Law University, Delhi

High-Level Track Facilitator (HLTF): Ms. Shuchita Thapar, Project Manager Cybersecurity Team, National Law University, Delhi

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator ITU** – Ms. Doreen Bogdan-Martin, Strategic Planning and Membership Department
3. **UN Secretary-General's High-Level Panel on Women's Economic Empowerment** – Ms. Verona Collantes-Lebale, Deputy Chief, Secretariat
4. **International Trademark Association (INTA)** – Ms. Tish Berard, President-elect
5. **Bangladesh Institute of ICT in Development** – Mr. Shahid Akbar, Chief Executive Officer (Bangladesh (People's Republic of))
6. **Health and Environment Program (HEP)** – Dr. Madeleine Scherb, President (Switzerland)
7. **eWorldwide Group** - Ms. Salma Abbasi, Chairperson and CEO
8. **Ernst & Young Germany** - Dr. Beate Degen, Partner
9. **Facebook** – Ms. Flavia Alves, Global Public Policy Manager

Introduction

- At the WSIS forum itself, there has been increased diversity – no more manels and 38% female participation. However, worldwide, the digital gender gap is still growing – especially in LDCs - and needs to be bridged immediately
- The problem is not unique to LDCs – mature markets too have major problems with equal pay for equal work and other issues

Vision

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Moving towards gender equity through increased education
- Major opportunities for information, training, awareness raising and investment in the ICT space
- Increased understanding of local challenges to promote gender mainstreaming at all levels
- Continued advocacy and communication aimed at the public sector, the private sector, and young women

Fresh Priorities

- Collection of gender disaggregated data and tracking policies, plans and budgets with gender targets – encouraging ongoing assessment/auditing of how women are progressing along the digital inclusion continuum, and how programs aimed at gender mainstreaming are functioning
- Addressing barriers to access, linked to affordability, security and lack of digital skills
- Enhancing co-operation across stakeholders
- Bridging the skill gap - training women and children in the use of digital technologies
- Enabling women's voices to shape digital and financial property products

Emerging trends

- 90% of new jobs are going to be in areas that are either related to digital technologies or involve the use of digital technologies – women can fill these jobs if the skill gap is bridged
- Efforts in place to institutionalise gender mainstreaming – such as the introduction of gender focal points, gender budgeting, gender sensitization training, prioritization of women's education

Opportunities

- Governments and international bodies are putting gender mainstreaming at the top of their agendas
- Involving men in women's rights movements
- Increasing skill training which is not necessarily linked to formal education
- Educating policymakers on gender issues
- Women have not always been treated as subjects of the law but remained within the private sphere – ICTs have the potential to change that and promote inclusion

Key Challenges

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- The digital gender gap is rooted in complex economic, social and cultural aspects of society
- Challenges include poverty, unpaid work, barriers to education, security and others
- Specific challenges in the global south include child marriage and limited educational opportunities for women
- Limited recognition for women's work
- Tokenism and stereotypes in programs targeted towards women
- Resource gaps in funding programs relating to gender mainstreaming
- Women are still not sufficiently included in the process of policy creation
- The numbers are getting worse – in 2015 the WEF suggested we will reach gender parity in 117 years

Link with the WSIS Action Lines and Sustainable Development Goals (SDGs)

- Gender equality and women's empowerment is indispensable to achieving the SDGs – we will not achieve SDG 5 or any other SDG unless the digital gender gap is bridged
- Governments are urged to enhance the use of ICT to promote the empowerment of women and girls as part of SDG 5(b)(1)

Case Examples

- **ITU**
 - Girls in ICT day – 166 countries this year, impacting 300,000 girls
 - Women in standardization group
 - EQUALS: Global partnership to bridge the digital gender gap with goals in three main tracks looking at access, skills and leadership
- **UNWOMEN**
 - Innovation program aimed at building market awareness, and calling for industry wide action to grow the innovation market for women and girls – supports women innovators and calls for a gender responsive approach through the innovation cycle
- **International Trademark Association**

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Promotes personal branding to allow women to progress well through their careers and utilizes women in powerful roles. Also focuses on outreach, career development and growth within the company. Uses trademarks to promote the work of women entrepreneurs – exemplified by the GI mark for Moroccan Argan oil

- **India/Nigeria**

Women from untouchable families in Andhra Pradesh villages have created small businesses through the use of cell phones, gaining economic power and leveraging that into social power

12 Nigerian girls have become web designers, clothes designers, app designers and have been able to sit at the table in global conferences after training

- **Facebook**

Women in Business program training women entrepreneurs in 15 countries on how best to evolve their businesses online

Road ahead

- Promote personal branding for young women entrepreneurs and SMEs
- Include other (intersectional) marginalised communities in the fight for gender mainstreaming, including the disabled and the elderly
- Gender sensitization at the grassroots level, targeting both genders
- Increasing digitalisation combined with gender mainstreaming has the power to raise GDPs and make progress visible – but only when combined with skills training
- Increase mentoring and training for young women in careers to allow them to climb up career ladders
- Promote safety of women online as a priority through the use of technology

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

UN Secretary-General's High-Level Panel on Women's Economic Empowerment

Ms. Verona Collantes-Lebale, Deputy Chief, Secretariat

Introduction

Global leaders, in adopting the 2030 Agenda for Sustainable Development, recognized gender equality and women's and girls' human rights and their empowerment as fundamental for pursuing sustainable development trajectories. Along with the stand-alone SDG Goal 5 – *Achieve gender equality and empower all women and girls*, gender equality concerns are integrated throughout the other priority areas and goals of the 2030 Agenda, with clear targets and indicators, including in bridging the digital divide. Target 5.b calls on governments to “enhance the use of enabling technology, in particular information and communications technology, to promote the empowerment of women.”

The just- concluded G7 Leaders' Declaration Outcome Document explicitly recognized women's entrepreneurship as “a key driver of innovation, growth and jobs.” The International Labour Organization this year stated that “women's ever increasing participation in the labour market has been the biggest engine of global growth and competitiveness.” If women's employment were to match men's employment – we could increase GDP everywhere –by 5 per cent in the United States, 12 per cent in the United Arab Emirates and 34 per cent in Egypt.

These notwithstanding, gender inequality remains pervasive, most notably in terms of ICT connectivity and in the development of content. *Worldwide, some 2.3 billion women do not have any Internet access, and more than 1.7 billion do not own a mobile phone. Women entrepreneurs are also less likely than men to use online technology for their business.* The global gender digital divide has widened by 1.2 per cent since 2013, equivalent to a total gap of some 257 million more men online than women. This has an impact on the way in which goods and services are created, produced, distributed and accessed in the digital environment. Women are not adequately represented as stakeholders, co-creators, and beneficiaries of technology-based interventions and often lack access to technology, digital skills, and media and information literacy.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

This gender digital divide does not exist in a vacuum. It is shaped by existing inequalities such as gender differences in ownership and control of assets, weak representation or gender imbalance in decision-making spheres. On the average, close to 80 per cent of positions in government are taken up by men, who shape or implement laws or policies. Gender norms and stereotypes continue to disadvantage women and girls' access to and active participation in the use and development of ICT. With women and girls performing the bulk of unpaid care and domestic work -- on average, women spend 19 per cent of their time daily on unpaid care work, compared with 8 per cent for men, they work longer hours but without commensurate remuneration, and have less time for learning, including about technology and use of technology, or to engage in community or political activities.

There is a need for more data on the gender digital divide but we have enough evidence of the gender gap to urge us to act; there is political will and concrete actions that have demonstrated *results to promote gender equality and women's and girls' empowerment, including in the field of ICT.*

The WSIS mandate to address the gender digital divide

The outcome document of the high-level meeting of the General Assembly on the overall review of the implementation of the outcomes of the World Summit on Information Society held in December 2015 drew attention to the gender digital divide with implications on women's access to and use of information and communications technologies in education, employment and other areas of economic and social development. It recognized that ending the gender digital divide and the achievement of SDG Goal 5 on gender equality and women's and girls' empowerment are mutually reinforcing efforts.

*The Ministers and heads of delegation participating in the HL meeting **committed to mainstreaming gender in the WSIS process including through a new emphasis on gender in the implementation and monitoring of the action lines and reaffirmed commitment to ensure women's full participation in decision-making processes related to information and communications technologies.** They called for immediate measures to achieve gender equality in Internet users by 2020, especially by significantly enhancing women's and girls' education and participation in ICTs as users, content creators, employees, entrepreneurs, innovators and leaders.*

Most recently, at the WSIS 2017 High-level Opening, all the High-level speakers underscored the importance of addressing the gender digital divide and called on all stakeholders to step up their efforts and put in place concrete actions to ensure that ICT engages, delivers and benefits girls and boys, women and men alike.

Actions addressing the gender digital divide

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Beyond political commitments and statements, concrete steps are already being undertaken – by governments, UN system entities, private sector and civil society to ensure the mainstreaming of gender in sustainable development plans broadly and/or put in place specific programmes to address the gender digital divide.

In an effort to strengthen institutional effectiveness to achieve gender equality and empower all women and girls, a number of Member States in their voluntary reporting to the High-level Political Forum reported prioritizing gender mainstreaming in SDG implementation through establishing gender equality as a cross-cutting priority in national sustainable development plans.

UN-Women, as a global champion for women and girls in the United Nations family, has identified innovation, and information & communication technologies (ICTs) as one of the key drivers of change underlying its new strategic framework (2018-2021). Through its **Innovation Programme**, UN Women puts emphasis on leveraging innovation and technology to address the barriers to gender equality and women's empowerment. Specifically, through digital platforms and technology, it builds market awareness, investment and industry wide action to grow the innovation market for women and girls; supports a gender-responsive approach throughout the innovation cycle; promotes women as innovators; and directly creates innovative solutions that meet the needs of women and girls.

Beyond addressing gender inequalities, it is crucial for women and **girls to be educated on, have access to and use ICT** because today, 90 per cent of jobs require some digital competencies. Access to and use of financial instruments/documents – credit card, bank statements, mortgage application and payments etc., will all require ICT systems. A lot remains to be done. Only 18 per cent of undergraduate computer science degree-holders and 26 per cent of computing jobs are held by women. Less than 25 per cent of the tech workforce is made up of women and even fewer are in senior management positions. This has resulted in a critical global talent shortage of 38 per cent. Gender stereotypes in the area of STEAM influence girls from an early age both within families and at school. Girls also tend to lack role models of influential women leading successful engineering careers.

UN Women introduces its **Virtual Skills School** as a response to new demands for ICT skills. The VSS incorporates in its curricula foundational skills, vocational training and 21st century IT skills. It aims to offer interactive and collaborative learning, interdisciplinary curricula, real-world projects, experience-based learning and gamification. It combines the expansive online platform with offline instruction, engagement, projects and assignments. Recognizing the economic constraints of many women and girls, the services will be provided free of charge. Through the programme, UN Women will link the VSS graduates to employers (UN Women partners) and educational institutions for jobs.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The Virtual Skills School relies on **partnerships**. UN Women is already working with the International Telecommunication Union (ITU) on a joint initiative called EQUALS that will deliver for women's access to the internet, digital literacy and coding and leadership in technology-driven sectors. UN Women is also partnering with the G20's e-skills for girls initiative under the leadership of the Government of Germany.

UN Women is working with close partnership with the government of Rwanda and the World Food Programme to pilot the **Buy from Women Enterprise Platform**. This is a data-driven, enterprise platform that combines an open source end-to-end cloud-based, and mobile enabled supply chain system to connect women farmers to information, finance and markets.

Key findings and recommendations of the UNSG's High-level Panel on Women's Economic Empowerment on digital inclusion

The High-Level Panel (HLP) for Women's Economic Empowerment (WEE) was established by the UN Secretary General to bring together global leaders to accelerate action on jobs, incomes and economic opportunities for women. Specifically, the HLP was tasked with developing an action-oriented agenda in support of women's economic empowerment in the context of the 2030 Agenda for Sustainable Development. The initiative is supported by the United Nations Entity for Gender Equality and Women's Empowerment (UN Women) with funding from the United Kingdom Department for International Development (DFID).

With powerful and influential membership representing governments, the private sector, civil society and the global multilateral institutions, and co-chaired by President by H.E. Luis Guillermo Solis Rivera and Ms. Simona Scarpaleggia, CEO of IKEA Switzerland, the HLP produced two reports and accompanying toolkits.

In its **first report**, the Panel identified seven drivers of transformation. For each of these, the Panel highlighted concrete actions and interventions that have demonstrated impact in reducing gender gaps focusing on four areas of work – women in informal work, formal sector employees, agriculture, and women-owned enterprises.

The seven drivers are: 1) Tackling adverse norms and promoting positive role models; 2) Ensuring legal protection and reforming discriminatory laws and regulations; 3) Recognizing, reducing and redistributing unpaid work and care; **4) Building assets – Digital, financial and property**; 5) Changing business culture and practice; 6) Improving public sector practices in employment and procurement; 7) Strengthening visibility, collective voice and representation.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The **second report** identified the top priority recommendations under each of the seven drivers of change and for the broader enabling environment. **Toolkits** were also prepared to provide compendia of resources, case studies and good practices for each driver to facilitate implementation of the practical recommendations in the second report. Each toolkit is accompanied by a working group paper with specific recommendations for transformational change.

Investments in quality, lifelong education and training of women and girls are essential for their success. **More young women need to be encouraged to work in science, technology, engineering and mathematics (STEM)**, and governments need to support women's full and equal participation in a digital economy that is already transforming the world. This can be done through economic policies and by reforming education policies and frameworks to challenge the harmful norm of women as inferior in STEM subjects and incentivize more women to pursue STEM careers.

The Panel underscored the **importance of ensuring that women and girls have access to assets, including digital assets** and recognized that governments, international organization, the private sector and civil society in partnership can accelerate current trends and innovations in digital technology and finance to expand women's economic opportunities.

As much as digital technologies have implications on improved sex-disaggregated data and gender analysis, effective decision-making relies on timely and high-quality data. The data revolution called for by the 2030 Agenda must have women and girls at its heart. There is also a **need for improved data and analysis** on issues of particular importance to women's economic empowerment, such as unpaid work, paid care work, informal work, part-time work and domestic work. Digital technologies, which are changing data collection and analysis capabilities faster than expected, can be—and already are being—leveraged.

In the first report which was a call to action, the Panel members led by example and made concrete commitments on the seven drivers.

In their second report, they laid out concrete recommendations on each of the seven drivers. On Driver 4 -- Building assets – Digital, financial and property, the Panel recommended the following:

1. *Ensure women's equal access to and control over productive resources, including land, labor and capital.*
2. *Encourage stakeholders of a country to assess how women are progressing along the digital inclusion continuum.*

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The working group on digital and financial inclusion of the HLP underscored that it was not enough to ensure that women have mobile phones. It was imperative to **think of digital inclusion as a continuum** through which women need to be able to **ACCESS** digital devices and financial instruments in an **AFFORDABLE** manner and to be **AWARE** of their uses before they can **ADOPT** them. Any effort to strengthen digital inclusion must address all these aspects.

3. *Enable women's voice to shape digital, financial and property products, services and policies.*

Ensuring sustainability and women's empowerment through these efforts also requires that women continue to contribute to and benefit from the growth of digital technologies and services **not only as users and customers** but also as operators and providers, policymakers, program designers, implementers and evaluators.

Progress on Panels' commitments:

A year after the commitments were made, the Panel members demonstrated leadership by delivering on their commitments. Some examples directly relevant to digital inclusion include:

- **Buy from Women Enterprise Platform**, a partnership of UN Women, the government of Rwanda and the World Food Programme. This is a data-driven, enterprise platform to connect women farmers to information, finance and markets. It maps farmers' land plots, generates yield forecasts and provides farmers with real-time reports of key performance indicators.
- **Launch of the MALAIKA campaign**, a partnership between UN Women and the Government of Tanzania and the Tanzania Women's Bank and other banks. With the partnership, loans and mobile phones are provided to low-income women to support financial and digital inclusion.
- **World Wide Web Foundation's campaign to close the gender digital divide**. Through the leadership of Ms. Nanjira Sambuli, deputy panel member, a women's rights online network was established to gather data on digital gender gap impacting on women's economic empowerment. With the data they have gathered and analyzed, they are disseminating their findings to governments and offering them some concrete recommendations in the form of roadmap on how to close the gender digital divide. They are also rolling out some training on digital technology for women, raising visibility through events at international conferences and intergovernmental meetings and conducting research.

Conclusion

We are aware of the problematique – there is a gender digital divide. There is also an acknowledgement of the imperative to address the gender digital divide. The mandates exist to mainstream gender and

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

empower women and girls from WSIS review outcome document and the 2030 Agenda for Sustainable Development. Concrete actions are already underway. It is time to scale up and step up these actions, with partners from governments, UN entities, other international and regional organizations, the private sector, leading technology companies, the civil society, to realize gender equality and empower women and girls in the field of ICT and to make digital technologies real assets for women's and girls' empowerment in all spheres of life.

International Trademark Association (INTA)
Ms. Tish Berard, President-elect

I am pleased to represent the International Trademark Association (INTA) as a High-Level Track speaker during the WSIS Forum 2017 in Geneva, Switzerland. INTA thanks the Secretary General, the Chair, this WSIS Forum organizers and participants for convening a diverse and meaningful dialog on the state of ICT's for development (ICT4D). Founded in 1878, INTA is the global association of trademark owners and professionals dedicated to supporting trademarks and related intellectual property to protect consumers and to promote fair and effective commerce. Trademarks signal the quality and good will of the goods and services they identify. INTA's goals include the promotion and protection of trademarks as a primary means for consumers to make informed choices for the products that they purchase and enable businesses to protect critical assets including their name and online reputation.

INTA's members represent more than 7,000 organizations from 190 countries and collectively contribute almost US \$12 trillion / €8.8 trillion / ¥73 trillion to global GDP annually. For comparison, the 2015 annual GDP of the top three markets was \$10.9 trillion (China), \$16.2 trillion (European Union) and \$17.9 trillion (United States). The Association's member organizations represent some 30,000 trademark professionals and include brand owners from major corporations as well as small- and medium-sized enterprises, law

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

firms and nonprofits. There are also government agency members as well as individual professor and student members. INTA undertakes advocacy work throughout the world to advance trademarks and offers educational programs and informational and legal resources of global interest. As a leading voice of trademarks owners within the Internet Community, INTA is a founding member of the Intellectual Property Constituency of ICANN. Headquartered in New York City, INTA also has offices in Brussels, Santiago, Shanghai, Singapore and Washington D.C. and representatives in Geneva and New Delhi.

Trademark protection plays a critical role in the stable and reliable functioning of the domain name system, digital trade and e-commerce. In terms of the United Nation's Strategic Development Goals (SDGs), trademark law and policy relate to: SDG 8 (promote inclusive and sustainable growth, employment and decent work for all); SDG 9 (build resilient infrastructure, promote sustainable industrialization and foster innovation); and SDG 16 (promote just, peace and inclusive societies). Public and private means of securing and enforcing trademark rights allow businesses to protect their innovations and protect consumers from fraud and abuse.

Trademark protection at the start of a business venture promotes long term and sustainable growth for small and emerging businesses. Failure to protect critical assets may result in cybersquatting, counterfeiting and in an inability to enforce one's rights should a business fall prey to numerous unfair business practices.

Trademark assets and their associated good will become the basis for sustainability by enabling the business to license its products or services and to expand into complementing streams of commerce. This benefits the proprietor, the consumer and the community-at-large. A successful business and brand can reflect positively on the country of origin and its economy and employment prospects. Trademarks are what connects the business to its customers and to its country. Famous brands may immediately identify a country. If we look at marks like Sony, Ford, Lego, and Heineken, most of these businesses started with

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

a small unknown trademark and an individual entrepreneur. Their trademarks have become famous and intertwined with the business, its products and brand presence and a source of national pride in the countries of origin.

Recently, INTA and Asociación Interamericana de la Propiedad Intelectual (ASIPI) collaborated on the study to determine the impact of trademark-intensive industries on the economies of Chile, Colombia, Mexico, Panama, and Peru. Overall, the results of the study are positive. Across the five countries, trademark-intensive industries generated 8 to 26 percent of total employment; and 10 to 21 percent of GDP. This is equivalent to 18.5 million jobs and a value added per person of US \$2,390 annually. These results underscore the huge potential for economic growth that can be unlocked by promoting trademarks within the business communities, and by further developing national trademark systems and trademark-intensive industries.

INTA is pleased to organize the WSIS Forum 2017 Workshop *Using ICT's to Support Development Opportunities by Building an Online Brand Presence for Small and Emerging Businesses*. The session focuses on business and nonprofit ventures that emphasizes women and youth opportunities. Economic empowerment is achieved through the development of powerful brands. Such brands identify the sources of businesses that rely on ICT's for dissemination and growth. Whether it's through a mobile application, text messaging, social media platform or technology training, the aim is to promote capacity building and infrastructure to create viable, inclusive and sustainable enterprises. Such programs enhance infrastructure by creating networks that enable the production and distribution of goods and services through ICTs. These sources are identified by their trademarks. By building a strong brand presence using ICTs, entrepreneurs can ensure that users know how and where to find them whether in a local village or an ocean away. Building protections around local resources sustains the value of the goods and services and helps businesses develop brick and mortar establishments and virtual networks that create jobs.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The backbone of brand development is trademark protection. Trademark protection is a system of local, national and international laws that allow entrepreneurs to protect their assets and combat fraud. The consumer has the right to know the source of the goods and services that they are purchasing or the charity to which they are donating. Trademarks are the legal means by which reliable sources are identified. The consumer can then return again and again for the same high quality experience. NGO's benefit from trademark protections in the same manner as for-profit business. Like a business, a charitable venture survives by the strength of its name and the quality of its output thus ensuring long term growth and sustainability. Therefore, it is imperative that ICT4D policies consider trademarks and consumer production as a part of regulatory regimes and educational programs that promote innovation, growth, fair trade and long term sustainability.

Thank you.

Bangladesh Institute of ICT in Development
Mr. Shahid Akbar, Chief Executive Officer

Gender equality is much complicated development agenda than many other challenges we are facing. The challenge has diverse aspects and exceptionally critical dependent on multiple factors, starting from policy issues to social norms & practices, education to religious aspects. So there is no short cut road to reach the destination of SDG 5.

Countries like Bangladesh achieved significantly in the gender equality domain through continuous efforts and commitment. Bangladesh also pursuing to achieve the goal set in SDG 5 by 2030. The SDG 5 specifically set indicators to measure the achievements under Gender Equality which need extensive efforts and

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

collaboration among different stakeholders. The initial steps should be concentrating on education component and social behavior along with framing appropriate strategies.

The key tool of addressing the gender equality is to ensure & facilitate quality education to the girls and economic opportunities to the women in a sustainable manner. Proper education will build the right skill to build the capacity of the girls to take right decision about her life. The existing education system needs to be reviewed critically from the gender perspectives. Similarly, if the women can be employed, both as entrepreneur or job, economic empowerment is the most powerful element to influence the gender equality agenda.

Engaging men in gender equality is very important and can play critical role to take the issue at family level where still women are most commonly deprived as a decision maker. The *He for She* approach can ensure more inclusive and effective to address the social taboo of gender mainstreaming. So any initiative targeting gender mainstreaming needs consider active engagement and ownership of men to achieve the SDG 5.

Women First can be another strategic step of the government and other organizations may adopt in the national development agenda. Unless the gender issue is properly addressed, special measures can be introduced in service proposition and delivery women may get some additional advantage with basic standards fulfillment. Specially, in access to finance, business licensing and education, women can be patronized through alternate channels and priority desks in the regular service channels.

Most of the developing countries signed all major international guiding agreements on gender and also developed national women policies, but very few could make significant development of implementation of the recommendations and commitments. To make these gender policies more in to action oriented activities and properly reflected in to implementation, one major intervention needs to be adopted to follow up the progress and report regularly. At the same time, these policies need to be available among different stakeholders and capacity of the relevant authorities should be developed aligning with the policies.

Incentivizing gender responsive organizations and initiatives can also be an effective tool to promote enabling environment in gender domain.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Health and Environment Program (HEP)
Dr. Madeleine Scherb, President

Le droit romain vu et mis en rapport avec la société d'internet par une camerounaise

Ce sujet m'a appelé à voir comment la femme depuis l'époque romaine a été au centre d'une complexité dogmatique de droits et d'obligations. De la contiguïté antique d'une société de l'information basée sur la conception archaïque de la femme à une société moderne à l'ère d'internet, les étapes du changement du statut de la femme d'un millénaire à l'autre sont remarquables. La plupart de ces femmes étaient illettrées et ne communiquaient que verbis, par la parole. La femme n'est pas une personne libre à l'époque, elle n'a pas les pleins droits, elle n'est pas autonome donc pas sujet de droit, car restant sous l'autorité du pater familias (le père de famille), son mari, son frère ou son père. La coutume et les mœurs effaçaient toute règle générale et abstraite. La dot est un patrimoine versé au mari par sa belle-famille afin d'alléger les charges provenant de la femme et des enfants communs en droit romain. Bien que certaines femmes aient porté le titre d'impératrice comme Livie, 3^e épouse de l'empereur romain Auguste au 1^{er} siècle, il n'en demeure pas moins qu'elles étaient éloignées de la vie publique et des carrières politiques.

L'invention de l'imprimerie vers 1440 (15^{es}) va révolutionner notre ère, un nouveau média de communication va naître l'écriture, ce qui va marquer un grand tournant dans la diffusion de l'information. Dès 1830 (19^{es}), c'est l'apparition des techniques électriques (télégraphe) et électromagnétiques (radio, téléphone) qui favorisa l'accès à l'éducation et à la maîtrise de ces outils. La dimension sociale de la femme sera déterminante et préoccupante, elle devra sortir de la torpeur, de l'aliénation, bref elle devrait se sentir libre de ses choix, s'instruire et utiliser les outils de communication tout en gérant sa vie de famille.

Je fais cette analyse basée sur ma propre expérience tout en m'inspirant de la théorie romaniste du droit. Le droit romain est la source de la civilisation qui s'est étendue dans le monde en devenant le ius gentium (le droit des gens). La question de la femme reste cruciale, Les romains qui la réduisaient à une personne incapable (alieni iuris) sous la tutelle du pater familias prescrivant un ensemble de règles auxquelles la femme étaient soumises de par même sa nature de femme. Qu'on parle aujourd'hui de la promotion de la femme ou plutôt de l'échec de l'expérience romaine et l'émancipation de la femme en ce 21^{ème} siècle ne serait pas indécent. Il est néanmoins observé que le droit romain s'applique encore dans certaines sociétés traditionnelles au Cameroun de tradition orale essentiellement.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Ma grand-mère me disait qu'il était une fois les Allemands vinrent au Cameroun et apprirent aux populations à parler allemand, puis vinrent les français qui leur apprirent le français. Ainsi commença l'émancipation, les femmes s'intéressent à d'autres professions autres que les tâches ménagères. A l'aune du 21^e siècle, c'est l'arrivée d'Internet au Cameroun plus précisément en 1997. La même année, je fonde en faisant mes études, la Health and Environment Program. Je concilie mes études et mon engagement humanitaire en me rendant dans plusieurs pays d'Afrique et européens où j'ai donné des conférences et fait de la recherche académique. Il s'agit du Kenya, de l'Afrique du Sud, du Lesotho, Botswana, Gabon, Sénégal, puis des pays européens: Autriche, Allemagne où j'ai eu mon diplôme doctoral et la Belgique. La HEP fête ses 20 ans cette année. Ma volonté et ma détermination m'ont porté à atteindre mon objectif, à savoir la défense des intérêts de ceux qui sont dans le besoin. Je n'ai pas hésité à travailler au-delà même de minuit pour donner de ma voix dans l'approche des parties prenantes de la société de l'information en vue de l'élaboration du plan d'action de Genève et de la tenue de la manifestation de haut niveau, le SMSI +10.

Si je suis compté parmi les femmes leaders de Suisse, c'est aussi à cause de mon inspiration des coutumiers médiévaux allemands encore influents à notre époque, des glossateurs de l'école de Bologne du XII^e siècle et des principes de liberté et d'égalité vis-à-vis de la femme. Bien qu'établie en Suisse de par mon mariage avec un suisse, je sais d'où je viens. Je viens du Cameroun, un pays de 23 millions d'habitants, un pays d'Afrique centrale, encore appelé l'Afrique en miniature, regorgeant d'hommes et de femmes oeuvrant pour le développement et offrant des opportunités favorables à l'information, l'éducation, la sensibilisation et l'investissement des nouvelles technologies de l'information.

Women and Information Society NGO
Mrs. Narine Abazian, President

Excellencies,
Distinguished Delegates,

Colleagues and partners,

Ladies and Gentlemen,

I would like to thank the International Telecommunication Union and other UN organizations for holding the annual WSIS High Level Event.

It is a great honor for me to have an opportunity to express my thoughts for WSIS high level platform.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Since 2012 our organization “Women and Information Society” has been initiating the Celebration of Girls in ICT International Day in Armenia.

International Girls’ in ICT Day is an initiative launched by ITU Members in Plenipotentiary Resolution 70 (Guadalajara, 2010) with the idea of creating a global environment that will empower and encourage girls and young women to consider careers in the field of information and communication technologies.

Under ITU's auspice Girls' Day is celebrated worldwide. **To date, over 240,000 girls and young women have taken part in more than 7,200 celebrations of International Girls in ICT Day in 160 countries worldwide.**

We propose “Girls in ICT” day to be set as an International UN Day. Why?

To expand our message to women and girls on this day, that we are building Information and knowledge Society. Women and girls have to become key actors in building Information and Knowledge Society.

Let me explain it:

In the industrial economy, strategy was executed in the top-down fashion. Those in the top figured out what needed to be done, and communicated it through the chain of command, to those at the bottom. People at the bottom didn’t need to understand the strategy they just needed to do what they were told.

In Information and knowledge economy, this isn’t true. You can’t execute strategy in a knowledge-based society, unless those with the knowledge understand what the strategy is. Those at the top have to formulate the strategy, but then they have to educate the workforce – every person in the workforce – about what the strategy is.

Strategy must become everyone’s job. Every woman and girl has to be understand what Information and Knowledge Society are and to benefit from it.

By creating a special observance, day the United Nations will promotes international awareness and action on these issues. UN other agencies with ITU will actively participate to supporting women and girls to be key actors in building Information and Knowledge Society.

In 2014 during WSIS+10, UN Women and several women’s organizations across the world, as well our organization proposed an action line on gender. It was not supported by MPP participants. Every discouragement negatively influences on activities. You cannot always work with enthusiasm. We have noticed that even in 2016 and 2017, no high level speakers from UNWOMEN have participated in WSIS.

No accepting the fact that girls and women are underrepresented in building Information Society, we limit the opportunities of our society.

World Summit on the Information Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The pattern of under-representation of women in Information Society (IS) Development will continue if more steps are not taken to educate, support and encourage girls and women.

The “Women and Information Society” NGO has initiated several projects in Armenia directed to help underserved women, youth, especially girls to become innovators and leaders using ICT. The Sample projects are: Girls in ICT, Technovation, Digital Literacy for Women Entrepreneurs in Rural Areas of Armenia. One of the core steps towards girls and women’s empowerment through technologies is to raise awareness on technology entrepreneurship education. The project is more important and valuable when technological entrepreneurship knowledge and skills and suggested solutions to a number of Sustainable Development Goals, concerning local communities acquired. In other words we have to use knowledge to solve community problem.

From this point of view WSIS-SDG Matrix is an excellent tool. WSIS-SDG Matrix linking WSIS Action Lines and Sustainable Development Goals (SDGs) was developed by all the UN system organizations at the WSIS Forum 2015. This is excellent instrument, which is more tangible for achievement SDG goals.

We propose to develop a similar mini matrix which will link WSIS Action Lines with only Gender issues of SDG and relevant targets, activities and finance. This way to highlight special attention to women and developing unified international instrument.

Everything possible to achieve in case of political will, desire and financial support.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

SESSION FOURTEEN: Ethical Dimensions of Information and Knowledge Societies and Media

High-Level Track Facilitator (HLTF): Ms. Mehwish Abid Ansari, Programme Assistant at Digital Programme, ARTICLE 19

High Level Speakers:

1. **Chairman of WSIS Forum**
2. **WSIS Action Line Facilitator UNESCO**
3. **Russian Federation** – Mr. Mikhail Rodionov, Deputy Director, Russian State Library
4. **University of Dhaka** – Prof. Khondkar Siddique-e Rabbani, Honorary Professor

Introduction

Session 14, on ICT applications and Ethical Dimensions of Knowledge and Information Societies and Media, brought together stakeholders from the public sector of the Russian Federation and from academia in Bangladesh. The session was more intimate than most, with just two panelists in conversation. However, the moderated discussion was followed by robust engagement from the audience, which fostered true dialogue among the panelists.

Vision

Though the projects presented by both panelists were different in scope and objective, both sought to address the development of a robust information society that draws knowledge and expertise from local contexts. Mr. Mikhail Rodionov, the Deputy Director of the Russian State Library, presented on the National Digital Library, which is an initiative that forms part of the Russian Federation's broader information society development strategy. This National Digital Library is designed to be a new platform that facilitates access to all available information in a digital form, enabling not only knowledge creation but also, in the long term, advanced knowledge extraction. Professor Khondkar Siddique-e Rabbani of the University of Dhaka continued the conversation by discussing the development and adoption of e-health technologies in Bangladesh. Caution should be paid to one-size-fits all approaches that underpin Global North-Global South technology adoption trends. Developing states such as Bangladesh experience specific

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

challenges that make technologies in developed states more difficult to adopt, such as infrastructure provision, the local availability of goods and resources, and proprietary exclusion.

Fresh Priorities

The projects presented by both panelists prioritized a more nuanced understanding of the information society: it is not simply a global monolith, but a collection of stakeholders that is fundamentally informed by local contexts, capacities, and expertise. As such, the aims of the projects each advocated for a shift in focus. Beyond providing a repository of information, the National Digital Library aims to develop Russia's intellectual potential, and to facilitate access to Russia's vast scientific and cultural heritage within its own borders and to the rest of the world. In the same way that this focus reflects a prioritization of capacity building, the University of Dhaka's work on e-health initiatives has resulted in a call for a research and development approach within developing states, so that technological leadership can grow from local experience. Both panelists prioritized the importance of cultivating and then capturing local knowledge development, which adds greater nuance to more the more mainstream priorities on the subject of access to information.

Emerging Trends and Opportunities

Both panelists also recognized the need to engage people in order to bring about change. Although governments can be powerful facilitators in the creation of national action plans that bring strategy and focus to building information societies and adopting ICT applications, change isn't necessarily a top-down phenomenon. People—whether in technical communities, academia, the private sector, or the general public—can drive innovation forward faster by bringing their expertise and capacity to the table first, so that the government agenda can follow their lead.

Key Challenges

Both panelists recognized regulatory challenges that face their respective projects. The National Digital Library in Russia seeks to move beyond the provision of material that is in the public domain; however, the legal landscape made it difficult at first to provide copyrighted material. The project has successfully worked to achieve legal reform in order to increase repositories of free resources for Russian citizens. However, the challenge remains to facilitate a larger reform of the copyright legal regime. In the context of e-health technological development, the post-colonial regulatory framework in Bangladesh favors the adoption of foreign technologies over fostering local innovation. As such, the current dynamic stifles the opportunity for more robust e-health initiatives championed by local developers that understand local need and context.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Link with the WSIS Action Lines and Sustainable Development Goals (SDGs)

The Following WSIS Action Lines were relevant to the discussion:

- C3. Access to Information and Knowledge
- C4. Capacity Building
- C6. Enabling Environment
- C7. ICT Applications: E-Health

The following SDGs were relevant to the discussion:

- 3: Good Health and Well-Being
- 9: Industry, Innovation, and Infrastructure
- 10: Reduced Inequalities

Case Examples

Over the course of the discussions, the case example of technological innovation in India was address in comparison to the dynamics within Bangladesh. Professor Siddique-e Rabbani recognized that the Indian regulatory environment fostered a strong leadership of science and technology. The government provided support to local entrepreneurs in addition to its engagement with IBM and other foreign technology companies. In this way, Indian companies were able to grow, learn from the knowledge transfer that was facilitated through the inclusion of foreign companies in the national market, and eventually became competitive in the global context. However, the lessons learned from India's example have not been replicated in other developing states, including Bangladesh. As such, government policies remain entrenched in the production of an environment that stifles the growth of local companies and solutions.

Road ahead

Both panelists noted that access and dissemination of information is not enough. In order to move forward, these endeavors must continue to address how we, as an information society, can leverage this accumulation of information to generate and extract new knowledge; at the same time, this information can be transferred to local innovators that can transform and adapt it to their own contexts.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Russian Federation

Mr. Mikhail Rodionov, Deputy Director, Russian State Library

What is the rationale for your project?

A few years back responding to challenges and tasks of Sustainable Development Russian leadership initiated Information Society Development Strategy. First Phase was completed last year and amongst tangible results were launching an e-government, creating online medicine platform and the National Digital Library. In May this year the new instalment of this Strategy was signed by our President. Building an information society was announced as one of Russia's key strategic priorities and the corner stone of the new digital economy.

Russia recognises that digital economy will mean new business models, new infrastructure including information communication technologies and of course new educational system. The strategy's primary focus is people as we strive to create a new platform allowing for free and convenient access to all available information in digital form and thus enable new knowledge generation. We need to create advanced knowledge extraction tools rather than just continue using digital resources including Internet as a fancy entertainment network.

The National Digital Library is an information system that will become a foundation for Russia's Information Knowledge Space. It must serve as the main means of collecting, storing and disseminating of the world's knowledge in Russian language as well as over 50 other languages of our country.

We recognised the need to provide access for our citizens to the most modern and verified knowledge including in National Digital Library not only public domain material but also copies of most up-to-date editions so we had to deal with copyright issues as well. Last year we changed our Library Law and Legal Copy Law introducing revolutionary Digital Legal Copy of all printed books and periodical press that is now being collected by our Russian National Library. We are also regularly including into the National Digital Library digital copies of at least 10% of all titles published in Russia annually.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

Currently, over 95 per cent of the National Digital Library collection (over 4,3 million objects) is available freely online while everything including copyright material can be accessed in almost 10 per cent of Russia's 38 000 public libraries and our target is 100% by the year 2019.

What is the expected impact for the society?

The main goal of the Information Society Development Strategy, part of which is creating of the National Digital Library, is establishing a Knowledge Society in Russia.

We must ensure Russian people's right to access to objective, proven and safe information that will allow for unlocking human potential, improving intellectual capacity, provide for lifelong learning, obtaining new competencies and broadening one's horizon.

The National Digital Library will serve as a basis for the Information Knowledge Space that will be formed by way of fostering science, developing modern educational projects including online and distance learning as well as creating a digital system of semantically linked knowledge.

This online resource must also help us overcome consequences of information overload leading to clip mentality and inability to adequately apprehend messages bombarding us through mass media and social networks. This has already become a major threat as many recent world political events indicate.

Further advancements in the legal system are also inevitable – we will need to attend to our Museum and Archive Laws to allow for more objects to be freely included in the Russian Digital Library. This will help complete the Information Knowledge Space as the system of collecting, storing and providing access to our vast scientific and cultural heritage not only in Russia but also all over the world.

The Russian Digital Library is already serving as a test bed for the newest information and communication technologies. We aim to help create Russia's own semantic search technologies, ensure advancements in big data, artificial intelligence and cognitive research. Ultimately we want to see Russia emerging as one of the world's leaders in the areas that form the technological basis for the current innovation cycle of sustainable development.

Summarising I'd like to mention three main areas where we should see direct effect as a result:

- Development of Russia's intellectual potential through free online access to the most up-to-date scientific, cultural and educational resources
- Creating solid basis for Russia's digital economy contributing to creation of the Knowledge Society

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

- Improving Russian legal system including Copyright Law allowing for effective knowledge collecting and dissemination

University of Dhaka

Prof. Khondkar Siddique-e Rabbani, Honorary Professor

Should we educate and train scientists and engineers in each developing country in developing their own e-health technology and strategy, or should we try to promote existing ones developed elsewhere and only train local manpower for adapting them?

‘GIVE A MAN A FISH AND YOU FEED HIM FOR A DAY; TEACH A MAN TO FISH AND YOU FEED HIM FOR A LIFETIME’. COMBINE THIS ANCIENT SAYING WITH MY OBSERVATION, ‘ECG AND X-RAY MACHINES, VITAL FOR HEALTHCARE, WERE INVENTED MORE THAN ONE HUNDRED YEARS BACK, STILL ABOUT 70% OF GLOBAL POPULATION LIVING IN RURAL AREAS OF THE THIRD WORLD DO NOT GET BENEFITS OF THESE TWO INNOVATIONS’, AND THE ANSWER WILL BE APPARENT, PARTICULARLY FOR THE APPLICATION OF ICT IN HEALTH, WHICH IS MY TOPIC OF INTEREST.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

BECAUSE OF VARIOUS FACTORS OVER THE LAST FEW CENTURIES A HUGE TECHNOLOGY GAP EXISTS AT PRESENT – BETWEEN THE RICH INDUSTRIALLY DEVELOPED COUNTRIES (IDC) AND THE LOW RESOURCE COUNTRIES (LRC), OFTEN BRANDED AS THE ‘THIRD WORLD’. THE APPROACH THAT HAS BEEN THE TRADITION IN THE RECENT TIMES, PARTICULARLY IN HEALTHCARE, IS TO DELIVER READYMADE PRODUCTS FROM THE IDCs TO THE LRCS, BUT THE SUCCESS HAS BEEN MINIMAL. WHY? FIRST, THE TECHNOLOGY DISPARITY OF THE PAST LED TO A HUGE ECONOMIC DISPARITY, SO FOR THE LRCS THE PRODUCTS FROM THE IDCs ARE PROHIBITIVELY EXPENSIVE. SECOND, EVEN IF THESE ARE PROCURED SOMEHOW THROUGH DONATION PROGRAMMES OR ELSE, THE DEVICES FAIL IN MANY CASES MUCH EARLIER THAN THE PROJECTED LIFETIME BECAUSE OF UNSUITABLE WEATHER CONDITIONS, EXTREME ABNORMALITIES OF ELECTRICAL POWER, AND LACK OF TECHNICAL EXPERTISE FOR USE, MAINTENANCE & REPAIR. USE OF SPECIAL INTEGRATED CIRCUITS AND BREAKABLE PLASTIC PARTS MAKE A STRONG DEPENDENCY ON THE MANUFACTURER FOR THE SUPPLY OF SPARES WHICH OFTEN POSE UNSURMOUNTABLE OBSTACLES FOR LRCS. BESIDES, TECHNICAL SECRECY MAINTAINED BY THE MANUFACTURERS, PARTICULARLY WITH INCREASING USE OF EMBEDDED SOFTWARE THAT REMAIN ‘UNSEEN’, HAS MADE IT VIRTUALLY IMPOSSIBLE TO REPAIR THESE DEVICES EVEN IF SKILLED MANPOWER IS AVAILABLE LOCALLY.

AGAINST THE ABOVE SCENARIO, CONSIDER THE CHANGE THAT HAS BEEN BROUGHT TO THE WORLD BY ‘UNPATENTED’ INTERNET AND OPEN SOURCE OPERATING SYSTEMS AND PLATFORMS LIKE ANDROID, WHERE MILLIONS OF INNOVATORS FROM DIFFERENT COUNTRIES HAVE ALREADY CONTRIBUTED TO TAKE THE BENEFITS OF MODERN TECHNOLOGY TO A GREAT MAJORITY OF WORLD’S POPULATION. THEREFORE, IF WE WANT TO TAKE THE BENEFIT OF ICT IN E-HEALTH TO THE WHOLE WORLD, WE NEED TO TAKE AN OPEN APPROACH SIMILAR TO THE ABOVE, WITH THE INCLUSION OF INTEGRATED ONLINE DIAGNOSTIC AND THERAPEUTIC DEVICES AS APPROPRIATE. THEREFORE, WE NEED TECHNOLOGICAL CAPABILITY TO DESIGN, DEVELOP AND IMPLEMENT APPROPRIATE DEVICES AND SOFTWARE IN EVERY COUNTRY OR REGION OF THE WORLD. FORTUNATELY, PEOPLE WITH THE REQUIRED SCIENTIFIC AND ENGINEERING KNOWLEDGE ARE AVAILABLE IN ALMOST ALL COUNTRIES, WHAT IS NEEDED IS SOME RE-ORIENTATION AND HANDS-ON TRAINING, PREFERABLY IN A LOW RESOURCE COUNTRY.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

I PROPOSE ESTABLISHING AN INTERNATIONAL TECHNOLOGY CENTRE FOR E-HEALTH, BOTH FOR R&D AND HANDS ON TRAINING, IN ONE OF THE LOW RESOURCE COUNTRIES WHERE ADEQUATE BACKGROUND EXISTS TO GIVE THE REQUIRED LEADERSHIP. WITH MYSELF AT THE HELM IN BANGLADESH, WE HAVE DEVELOPED A STRONG TEAM FOR R&D IN DESIGNING AND DEVELOPING ICT BASED DEVICES (BOTH HARDWARE AND SOFTWARE) THROUGH A CONTINUED EFFORT FOR MORE THAN 35 YEARS, AND IN E-HEALTH (TELEMEDICINE WITH INTEGRATED DIAGNOSTIC DEVICES) FOR ABOUT 6 YEARS. THE ABOVE INCLUDES A SUCCESSFUL IMPLEMENTATION OF TELEMEDICINE THROUGH A RURAL ENTREPRENEURSHIP MODEL, FOR WHICH WE HAVE BEEN AWARDED HERE AT WSIS-2017. THEREFORE, IF I AM GIVEN THE RESPONSIBILITY TO LEAD AND INITIATE SUCH AN INTERNATIONAL VENTURE, I WILL BE READY TO ACCEPT IT PROVIDED NECESSARY FUNDS AND LOGISTIC SUPPORT ARE MADE AVAILABLE.

How important is it to regulate different e-health innovators and service providers – or should we give some minimal conditions together with broad guidelines and rely on individual judgements?

The state organs in the present day world are basically 'Governments' trying to 'govern' or regulate all activities of the people. This tendency to 'govern' or 'rule' is more overriding in the Low Resource Countries (LRC) most of which were colonies of other powerful countries in the past. The colonial administrations were clearly suppressive and were not meant to promote and develop local ingenuity, neither to enhance the quality of life of the local people. Even after many decades of becoming independent, these countries could not come out of the colonial regulatory and suppressive mind-set that they inherited; rather in some cases these have intensified because of various factors. This has seriously obstructed efforts by local innovators and entrepreneurs to manufacture and market indigenous technology based products and services, which could have solved problems of the local people enhancing the quality of life.

Looking from the other end, however, a question arises, how can one ensure that the products or services entering a market have the requisite quality? In most of the industrially developed countries (IDC) government regulatory bodies in general have a reasonable performance, but not so in the LRCs. Here, government regulatory bodies tend to become casual, often corrupt, allowing sub-standard products and services to get through easily, which is in effect harming people. We have to decide – what do we want? To uphold the 'regulatory system of a Government' irrespective of the results it produces, or to find realistic solutions that actually deliver the desired benefits to the people? I am proposing an alternative

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

below based on a system of 'guidance' and a minimum of 'regulation', taking a cue from natural human behaviour and the development of human societies. In a human society a child is born free and is taught certain social norms as it grows up. On adulthood, if a charge is brought against a person of breaking any of these norms, the social judiciary takes decisions through a thorough inquiry whether to acquit or imprison the person.

In the same light, for every conceivable e-health product and service, let the World Health Organisation produce a '**norm**' or a '**minimum quality specification (MQS)**', through a committee of relevant technology experts drawing from both IDCs and LRCs. MQS for an item would be technically explicit, giving the desired minimum of technical performance levels and safety features. This will act as the 'guidance' and should be ratified by every country and well circulated. Side by side, the 'minimum regulation' that the government in an LRC will put forward is that whoever wants to initiate an e-Health product or service '**has to identify oneself**' through a name or a brand, and will automatically be understood to take responsibility that its products or services satisfy the relevant MQS. If any person or group has reasons to doubt the quality of products or services of a brand, the person or group may get these tested through any expert group. If the accusations are found valid by them, they can file a case to the judiciary. The judiciary will get the products or services tested thoroughly by other identified expert bodies such as universities, and will give a decision accordingly. If the offense is proved, the judiciary will decide whether to give warnings to improve the product or to stop production or to punish to the offender, depending on the severity of the offence. Thus individual freedom and judgement in manufacture and distribution of products & services are expected to bring forth a positive change in the scenario providing proper e-Health services to a people.

7. Concluding Session

Written Statements

Switzerland

Mr. Philipp Metzger, Director General, Federal Office of Communications (OFCOM), Federal Department of Environment, Transport, Energy and Communications (DETEC)

Chairman,

Mr. Secretary-General,

Ministers,

Excellencies,

Distinguished Delegates,

Ladies and Gentlemen,

As we all know, ICTs can play a crucial role in our lives and can greatly contribute to the implementation of the SDGs. They provide new solutions and, where appropriate infrastructure, skills, and services are available, they can be incredibly powerful, e.g. in transforming education, healthcare, or the way we do business. But to do so, we need to deploy special and relentless efforts.

In order to harness the ICTs' full potential, all stakeholders, across all sectors, we need to be aware of the vast opportunities created by ICTs and digitization – but also of their challenges, including structural change and transformation processes of societies and economies all over the world.

To meet the SDGs, it will be key to engage in constructive cooperation, improved exchange of information in relation to ongoing projects, and joint identification of relevant cross-sectoral issues and interfaces as well as strong partnerships between all stakeholders: governments, international organizations, the private sector, civil society, and the technical and academic communities.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

This requires networking between all stakeholders, open minds and a respect of the values and needs of different stakeholder groups in order to enhance mutual comprehension and cross-sectoral, interdisciplinary cooperation between them.

Let us therefore work together to leverage networks and research, stimulate innovation, scale up current initiatives and design new solutions in an inclusive and participatory way. There is a need for new forms of connecting all stakeholders and providing them with real opportunities to exchange their experiences, best practices, and to discuss together the challenges at hand - both at the national and international level.

Enhancing cooperation at the national and international levels between governments and with all stakeholders is not a new idea, but it is still not sufficiently done and often not with the right attitude.

At the national level, there are a number of challenges to overcome:

We need to connect those people working on implementing the 2030 Agenda, which serves as a kind of a “global overall strategy”, with those working on national digital strategies so that these and other strategies are aligned and work hand in hand.

Cooperation and exchange of information between different ministries and government agencies should be encouraged so that they are aware of each other’s activities and take advantage of synergies and do not fall into competition for resources, attention and recognition;

There is a need to build trust between stakeholders and to take action against any prejudices.

Let us listen and respond to the needs of citizens and businesses. That includes also engaging with them as partners, taking their concerns fully into account and listening to their constructive criticism, because often businesses and civil society have experience that governments do not have.

Their trust and willingness to cooperate has to be earned by being accountable to them, but we also need to build capacities of businesses and citizens for them to understand that it is also in their interest to act responsibly and accountably to society as a whole.

WSIS Forum 2017: High-Level Track Outcomes and Executive Brief

The results of these efforts should be analyzed regularly with regard to its actual added value for each of the stakeholder groups and for the perspective of the persons directly concerned. A culture of transparent feedback on the successes and failures can provide a learning effect for our future work.

At the international level, there are a number of useful fora for multistakeholder dialogue and exchange of experience, like the annual WSIS Forum here in Geneva.

The WSIS Forum brings together engaged experts and decision-makers from all over the world and from all stakeholder groups. It offers a great opportunity to discuss decisive and emerging policy issues related to the digitization of our societies and economies, and to learn from experiences of other stakeholders.

Switzerland has been and will be continuing to support the WSIS Forum as a partner for specific activities – as we are doing again this year.

Excellencies,

Ladies and Gentlemen,

In addition to the WSIS Forum, we also attach great importance to the UN Internet Governance Forum. This year, Switzerland will be the host of the 12th annual IGF, which will take place from 18 to 21 December at the Palais des Nations in Geneva.

We believe that having both the WSIS Forum *and* the IGF 2017 here in Geneva provides a unique opportunity to break the silos and bring together experts and decision-makers from all sectors to discuss digital policy issues and their linkages to the SDGs.

On behalf of the Swiss authorities, I would like to invite you all and your colleagues to actively engage in the preparations of and participate in the IGF, fully benefiting from exchanges with key stakeholders from all over the world to shape the digital future.

To conclude, we would like to thank ITU, UNESCO, UNDP and UNCTAD, as well as all WSIS action line facilitators, but also all other IGOs and all private actors for their commitment to implement the WSIS outcomes and to link their activities to the SDGs.

Thank you very much for your kind attention.
