Executive Summary of the Outcomes

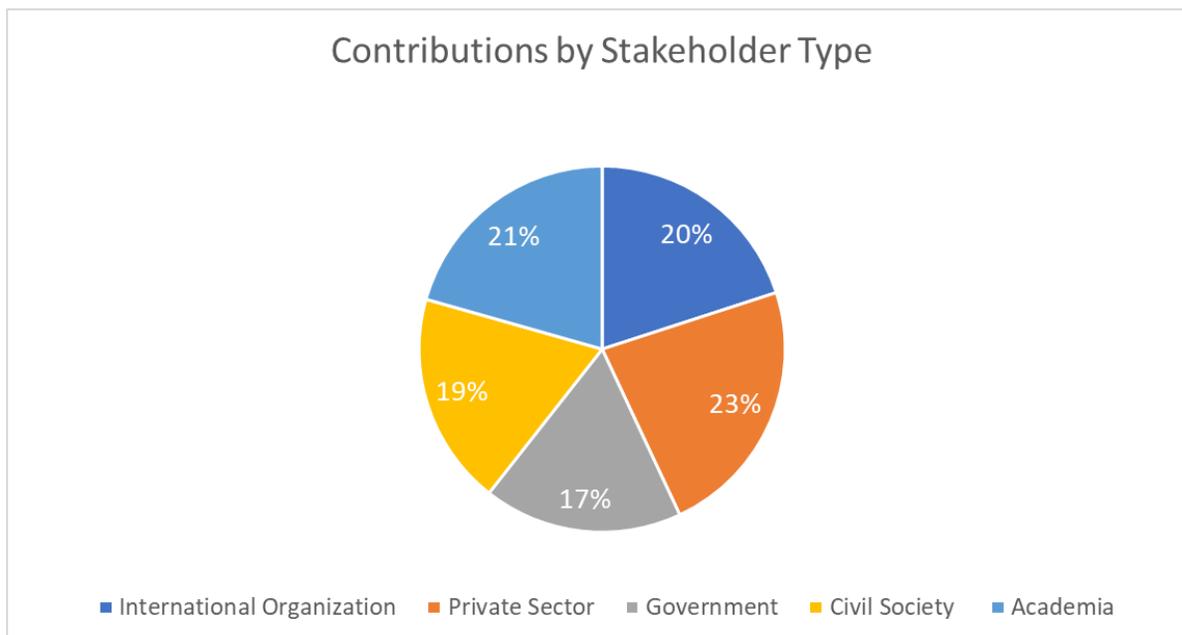

I. Open Consultation Process: A bottom up approach to building the agenda of the WSIS Forum

Ensuring an open and inclusive multi-stakeholder approach, the Agenda and Programme of the WSIS Forum 2019 were built through the crowdsourced inputs on suggestions for the thematic aspects and innovations of the format of the WSIS Forum 2019 through the Open Consultation Process (OCP). All WSIS Stakeholders (governments, civil society, private sector entities, academia and technical community, and international organizations) were invited to submit and contribute their official submissions through the online official submission form and physical meetings towards ensuring an active participation across sectors in forming the Agenda and the Programme of the WSIS Forum. The OCP process began in July 2018 and was structured in five phases. All related information can be found at: <https://www.itu.int/net4/wsis/forum/2019/Home/Consultations>.

II. Official Submissions received

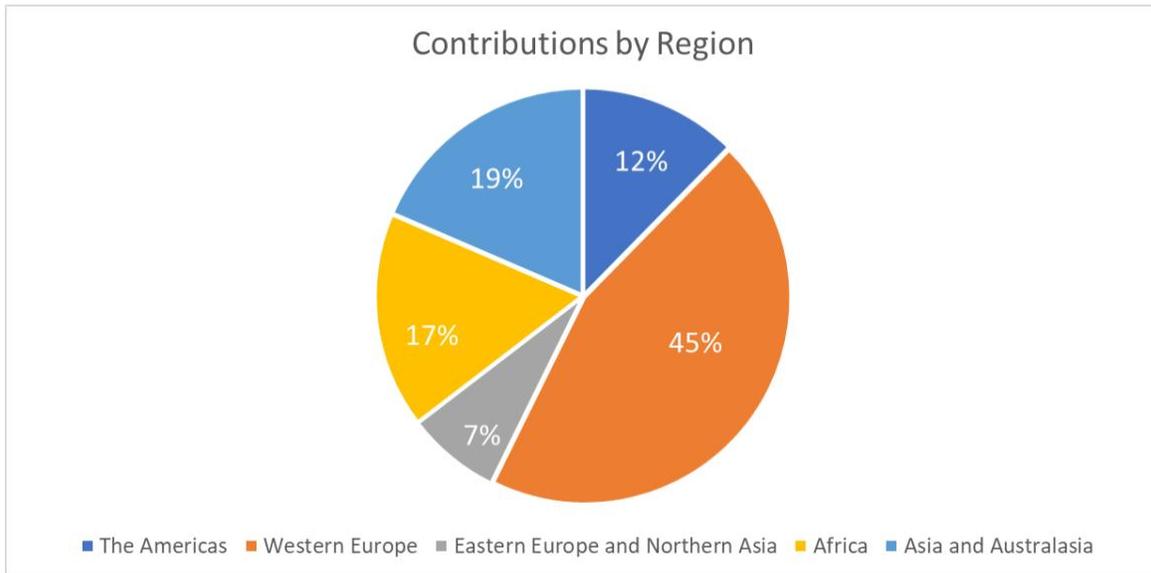

The ITU-WSIS Secretariat received more than 300 submissions containing proposals on the thematic aspects and innovations on the format of the WSIS Forum 2019, including requests for partnerships, workshops, exhibition spaces and so on.

III. Please see below the submissions by Stakeholder Type (work in progress):

Please note that the agenda and workshops of the WSIS forum includes the engagement of more than 32 United Nations (UN) Agencies, including UN Regional Commissions. The statistics above represent the submissions and suggestions received through the Open Consultation Process of the WSIS Forum 2019.

IV. Please see below the submissions by Regions :

It is important to note that about half of submissions from Western Europe came from the headquarters of Organizations with an international presence.

V. Summary of Outcomes:

Through the Open Consultation Process, WSIS Stakeholders reaffirmed the importance of the WSIS Forum as a **key platform for networking and collaboration to develop inclusive and development-oriented Information and knowledge societies**. Stakeholders view the Forum as an opportunity for a diverse range of actors in the ICTs field to **showcase their innovative technologies** and engage in stimulating discussions to **share ideas and challenges in strengthening the implementation of WSIS Action Lines and Sustainable Development Goals (SDGs)**. Many stakeholders saw the WSIS Forum as a platform to **exchange best practices** that could potentially lead to **greater collaboration and partnership between all global stakeholders**. There was also a clear demand for the Forum to reach out even further into communities and groups of stakeholders (primarily the SDG community) who – while relying on ICTs – are not currently engaged. This is in particular to address the needs of **developing and least developing countries**, by advancing the effectiveness of ICTs and development to lead to life improvements and embrace the digital world, which eventually great to enable the achievement of the SDGs. In moving forward the 2030 Agenda for Sustainable development, it was emphasised that the WSIS process should continue to be defined in a multistakeholder nature and the WSIS Forum to foster discussion on key areas of ICT accessibility, share information on good efforts, as well as to identify next steps and promote collaboration. The WSIS-SDG Matrix was commended as a successful tool to show the linkages between each WSIS Action Lines and the SDGS which provides rationale for each.

Participation of youth for the WSIS Forum 2019 was also highlighted. The inclusion of youth that the WSIS Forum is crucial target on the way to sustainable development in the future Information Society. Empowering young representatives was seen as an important dimension given their greater presence online and their potential dynamic role to play in building innovative solutions

based on technology. Stakeholders appreciated the Forum to provide dedicated ICT youth platforms that allow young people to make their voices heard in addressing their aspirations and ideas. Programmes such as Hackathon, youth workshops, knowledge café, dialogue between the experts and young representatives were responded positively and should be further strengthened.

There were a number of topics that were notably mentioned by a large share of stakeholders, in particular important issues like bridging the digital divide, cybersecurity and ethics, as well as emerging trends and technologies such as Artificial Intelligence, Internet of Things, Blockchain, 5G, and drone technology. Other issues such as Fourth Industrial Revolution, Digital transformation, ICT applications such as health, e-Learning, ICTs and Sports, and many more were also put forward for the agenda of the WSIS Forum 2019.

The presence of **remote participation facilities** throughout the process, including during the WSIS Forum was greatly appreciated by the stakeholders, which manifest the inclusivity for all. There is a need to enhance this component in order to gather more perspectives for the planning of the Forum and when the Forum is taking place.

Furthermore, there was a suggestion to create an **online platform where participants** can share ideas, get in contact and keep in touch after the Forum. This platform should have online profiles of the participating organisations with their expertise listed to enable contact between organisations to connect and start new projects.

It was also notably noted that this year's submission received an increasing number of contributions from the **Private Sector due to an increased interests from the Startups**. There was a suggestion for the WSIS Forum 2019 to develop its Private Sector partnerships (Corporates, SMEs and Startups) in a broader way. Innovation and progress along the UN SDGs can only be achieved in the engagement of the broad society in a balanced way.

The WSIS Forum derives its strength and success through the participation of a wider range of multi-stakeholders who continue to leverage ICTs for realising the SDGs. For this reason, there was a call to strengthen efforts by promoting WSIS activities and outcomes in all **six UN official languages**.

Stakeholders also expressed the importance of the WSIS Forum to analyse the implementation of the WSIS Action Lines for achieving the SDGs.

VI. Topics for discussion for specific WSIS Action Lines:

Stakeholders were asked to recommend potential topics for discussion related to the WSIS Action Lines. While many of these topics touch on multiple goals of the WSIS Action Lines, the suggestions are organized based on the primary focus expressed by the submission. This list is not exhaustive, but provides a general overview of commonly identified topics. With the purpose of enhancing the global partnership for sustainable development through intergovernmental and multi-stakeholder partnerships, that mobilize and share knowledge, expertise, technology and financial resources, it has been suggested that WSIS Action Lines discussions should acknowledge the following topics:

- Role of governments and all stakeholders (ALC1):
 - Multistakeholder partnerships and participation in Internet public policy discussions

- Cooperation among stakeholders
- Promote an active public, public-private and civil society partnerships, building on the experience and resourcing strategies of partnerships
- Sustainability for the delivery of vital government services and the SDGs
- The role of governments and all stakeholders in the promotion of ICTs for development
- Gov-Gov cooperation
- Achieve inclusive engagement and cooperation amongst government to provide sustainable and affordable access to ICTs
- ICT Infrastructure (ALC2):
 - Hybrid infrastructure and technologies for affordable broadband access
 - Innovative solutions for connecting the unconnected - community based approaches to telecom infrastructure ownership
 - Achieving an inclusive society with ICTs
 - Potential partnerships within different stakeholders will enable better funding for infrastructure
- Access to information and knowledge (ALC3):
 - Develop user-friendly resources so as to make them more accessible for disabled or illiterate people
 - Inclusive and open policies, strategies and programmes for expanding and enhancing universal access to information and knowledge
 - Close the digital divide and provides the path for inclusive access to information and technology
 - Accessibility as a transparent tool for democratic citizen engagement
 - Supporting development of more accessible virtual environments for mobile connectivity
 - Providing a better online service for users in countries with limited access to internet connection
- Capacity building (ALC4):
 - The opportunities for bringing STEM (Science, Technology, Engineering and Math) curricula to developing markets using emerging technologies (ChatBots, etc)
 - ICT Capacity building needs for the vulnerable countries
 - Strengthen the capacity of all countries, in particular developing countries, for early warning, risk reduction and management of national and global health risks
 - Capacity building and e-Training among the youth in order to ensure that they will be able to use ICTs efficiently in the future
 - Capacity building with a focus on self-learning technologies and Open Educational Resources (OER)
- Building confidence and security in the use of ICTs (ALC5):
 - Information security best practices
 - Ensuring that all citizens understand privacy and security (a global training initiative)
 - The role of intellectual property and competition law within the ICTs
 - Confidence and capacity of all levels need trust among and between individuals and all layers of institutions
 - Preserve the digital heritage; data protection and censoring digital archives

- Designing legal frameworks with regard to cybersecurity for countries who want to promote their ICT markets nationally and internationally. Adoption of ethical standards by professionals in different disciplines in applying AI technologies (lawyers, data analysts, engineers etc)
- Enabling environment (ALC6):
 - Enabling environment and promotion of e-commerce in vulnerable countries
 - Advancement of the digital economy and in an age of AI and IoT
 - Legal, policy and regulatory frameworks for promoting digital economy, promoting e-commerce while addressing various tax challenges of the digital economy
 - Safer internet
 - Enhance the use of enabling technology, in particular information and communications technology, to promote the empowerment of women eEmpowerment, eInclusion, ICTs for Safety
 - Frontier Technologies such as blockchain and its use for assisting underserved populations, for example: refugees
- ICT applications (ALC7):
 - ePhyto certificates for plant protection
 - e-science: The role of science and innovation in building the information and knowledge societies
 - e-waste
 - ICT applications: benefits in all aspects of life: Empowering and regulation of e-Commerce as a way to facilitate trade between countries
 - Enhance international cooperation to facilitate access to clean energy research and technology, including renewable energy, energy efficiency and advanced and cleaner fossil-fuel technology, and promote investment in energy infrastructure and clean energy technology
 - Digital Innovation in Agriculture
 - Promoting digital payments by governments, private and civil groups
 - Financing models for connectivity
 - e-Businesses> Migration, remittances and sustainable development
 - Creates a non-commercial function for the Internet, focused on bottom-up and cross sector communications to encourage stakeholders working for the advancement of humanity to share calendars, resources and skills to achieve common goals for a region or the globe
- Cultural diversity and identity (ALC8):
 - Introduce a system of locally owned, interest-based portal business in all countries to meet the needs for cultural, linguistic and gender diversity
 - Special training for language experts in the ICTs to ensure the preservation of multilingualism and multiculturalism
 - Development of individual and societies, functional institutions, international society and global ecosystem are depending on individual's identity development
 - ICT 4 ALL: Indigenous languages matter for peace, innovation and development
 - Culture for a Sustainable Digital Environment: How can culture help shape the digital environment and why is it so crucial today, with the advancement of Artificial Intelligence, for ICTs to embrace culture fully?

- Media (ALC9):
 - Promotion of the SDGs through the media as a way to reach the general public
 - Harnessing Artificial Intelligence to strengthen journalism and media development in accord with UNESCO's Internet Universality ROAM principles
- Ethical dimensions of the Information Society (ALC10):
 - Strengthen the right to privacy, especially with the growing role of ICTs in developing countries with less stringent legal frameworks
 - Ethical dimensions of the Information Society Knowledge deduced from SNS is useful for many aspects of applications of ICT yet, the trustworthiness is always the problem to be solved. Use of AI, the trustworthiness could be implemented from the big data from SNS
 - Create gender-inclusive policies
 - Provide a common system for reporting, evaluating and escalating ethical issues that includes all established stakeholder groups at the national, regional and international levels
 - Ethics in AI
 - Universal Design: ensuring equal access to ICT for persons with disabilities and everyone
- International and regional cooperation (ALC11):
 - Bringing ICTs to developing countries or rural areas is a way to boost their development
 - Computer Incident Response Teams (CIRTs) against cyber security and international cooperation
 - Enhance the global partnership for sustainable development, complemented by multi-stakeholder partnerships that mobilize and share knowledge, expertise, technology and financial resources, to support the achievement of the sustainable development goals in all countries, in particular developing countries
 - maximize all the Search Skate multi-stakeholder Internet Governance System

It was also stressed for WSIS Forum to continue increasing engagement with the quadruple helix actors: governments (regional, national and local), private sector (startups, including SMEs), academia and civil society in its discussions and activities. Interactions with the relevant focal points from either the Telecom/ ICT Ministry or Regulator and cooperating organisations, in order to initiate consultation process with relevant stakeholders and channel the information to the regional ITU offices, besides promoting the organisation of Regional seminars on an equal basis with seminars in country level need to be reinforced and facilitated.

There were also suggestions to promote the **involvement of wider diffusion and equitable representation** in the Forum based on gender and geographical balance, including gender equilibrium among the speakers/panellists. These suggestions specifically called for direct outreach efforts to increase participation and accessibility for youth, women, and people with disabilities. It was emphasised that these efforts would help to encourage more diversity among the voices at the Forum. The use of social media as well as the incorporation of webcasting, transcripts, and translation where possible for the workshops organised at the WSIS Forum should be maximised. It was also suggested to develop a WSIS Forum app to live stream videos for a broad audience.

In conclusion, the Stakeholders highlighted the importance of the WSIS Forum Outcome Document that captures the discussion, debates, recommendations of each workshop held during the WSIS Forum. This outcome document is of high relevance as it is released on the last day of the Forum providing the participants a lot ideas, incentives, initiatives and partnerships for further action and implementation in their respective area of work.

VII. Regional Input from regional meetings to the WSIS Forum 2019:

There was a suggestion to have pre-WSIS Forum national and regional meetings that then feed into the annual WSIS Forum in Geneva. Several stakeholders viewed the need to hold the WSIS Regional Forum to be considered. Specific attention was put for landlocked developing countries (LLDCs) and the other vulnerable countries which need capacity support to develop the required supportive policies, regulations and institutions.

Regional cooperation was also stressed. Regional commissions are invited to continue their work in implementation of WSIS and their contribution to the reviews thereof, including through regional reviews. ITU, UNESCO, UNDP and UN Regional Commissions in collaboration with other UN Agencies are working towards regional WSIS implementation progress and reviews.

Partnership track was suggested to facilitate information exchange on concrete projects at the grassroots level, and foster multi-stakeholder conversations on innovative cross-sectoral partnerships for implementation, which could bolster relations between high-levels and grassroots actors to get feedback on the progress and show the impact of project implementation in local and regional areas. There were suggestions to use social media to promote outcomes of regional fora. Furthermore, there were also proposals to provide funds sponsorship for participants from less developed regions to participate in the WSIS Forum and to present their work and projects at the Forum and increase their visibility.

VIII. Themes and Topics suggested by WSIS Stakeholders:

The following themes and topics were among those suggested by the WSIS Stakeholders during the WSIS Forum 2019 Open Consultation Process:

- WSIS Action lines for SDGs.
- Youth in ICT for SDGs.
- Bridging the Digital Divide.
- ICTs for food, water, education and employment.
- E-Environment, Climate Change and e-Waste.
- Capacity Building.
- Blockchain.
- Strengthening ICT Connectivity and Digital Inclusion
- Internet of Things.
- Accessibility.
- ICT Success Stories.
- Role of the private sector in implementing SDGs.

- Using data effectively to inform ICT policy.
- Cybersecurity.
- Digital Transformation.
- Emerging technologies.
- ICTs for the agriculture.
- Artificial Intelligence and Ethics.
- Innovative 4.0 technologies.
- E-learning for Refugees.
- ICTs for e-government.
- Towards Gender equity.
- Connecting the next billion.
- ICTs and Sports.
- Data protection.
- Smart Cities.
- Access to the digital economy.
- The role of science and innovation in building the information and knowledge societies.
- ICT Accessibility for Persons with Disabilities.
- Big data and social change.

IX. Suggested innovations in the Structure and format

The following suggestions were made on the structure and format of the WSIS Forum 2019:

Participation

WSIS Stakeholders acknowledged the values and principles of the multi-stakeholder cooperation model and engagement that have characterised the WSIS process since its inception. Submissions to the OCP for WSIS 2019 noted the following with regard to the effective participation at the Forum:

- The Forum's effectiveness could be strengthened by the presence of more experts from a diversity of disciplines;
- Improve online participation;
- More intensive civil society participation in the general sessions;
- To attract more senior leaders from the private sector, including private sector representatives from developing countries;
- To improve SME sector's participation;
- Strengthen the participation of government officials past and present;
- Ensure a broader UN Agency participation;
- To decentralize WSIS participation into regions;
- Involve all parties i.e the Civil society, the Media, Social Media practitioners (bloggers), Indigenous People from all communities et all.

Balance participation was also highlighted, particularly to encourage women, youth, disabled and other underrepresented groups participation at the Forum. Inclusive participation was further

emphasised by providing different tools that enable participation such as through remote participation and session recording tools.

Accessibility and Inclusion

Notable attention was given to support the participation of the developing countries and least developed countries at the Forum. Several stakeholders suggested to provide funds or grants to contribute in bringing the representatives of such countries to the WSIS Forum.

Remote Participation was identified as a method to increase outreach to underrepresented populations, specifically the use of social media efforts directed at those groups. Other suggestions related to accessibility and inclusion, including:

- to record podcasts with key messages;
- to provide videos in open spaces after the workshops concluded, so that people could catch up with the session and indicate how to get in touch with the workshop organisers when they missed to attend;
- to incorporate webcasting, transcripts, and translation as much as possible;
- to videotaping the workshop and sharing it on channels such as Youtube. Presentation materials could also be shared via slideshare or website online.
- to create an app that allows all stakeholders to interact and communicate and facilitates an atmosphere of mentorship during the time the Forum is not active in order to allow for collaboration. This will facilitate closer interaction outside the forum as well.

Further suggestions included:

- **Links with other policy processes**
 - Make links with other policy processes where topics relating to the information and knowledge societies are taking place, such as the High Level Political Forum for follow-up and review of the 2030 Agenda for Sustainable Development and the Sustainable Development Goals; the Human Rights Council and so on.
- **Link with the SDGs process:**
 - WSIS Forum should continue to build useful links with the SDGs Agenda that complement from ICTs perspective the work done on SDGs in other fora while remaining in line with the original WSIS principles and goals.
 - As countries begin the implementation of their action plans for SDGs achievement, the WSIS Forum can provide opportunities for ICT stakeholders to present successful case studies of already implemented solutions, and for policymakers and civil society groups to bring attention to country-specific needs.
 - Create online platform to record the indicators of sustainability and Vision 2030, and the Government of each of the United Nations Countries to provide sufficient data to see the latest developments and statistics to achieve the vision 2030.
 - To make a table of Action Plan versus the Action Performed, which could be published every year.
 - To showcase initiatives at global level and to link them with local offices of specific UN agencies.

- To create specific knowledge sharing events, directly linked to specific SDGs, clearly integrated into the WSIS process.
- Annual submission of WSIS Country Reports by Communications Regulators to track implementation of WSIS Action Lines and SDGs.
- To identify top 3 priority SDGs for each year to be driven by each country and monitor implementation through Champions and annual country reports.
- WSIS should develop an Open Source Application Development Platform that gives developers in different countries access to reusable source code for development of solutions in line with WSIS mandate and 2030 Agenda.
- **Regional Focus**
 - Holding the WSIS Forum at the regional level; where specific common interests could be shared in the region and strengthen the tie among the members of the region. Through the region Forum, more local people or regional representatives can easily participate.
 - Guidance and fora for sharing of experiences among countries. International and regional cooperation to support vulnerable countries.
 - Introduce the event's format such as Regional theme seminars.
- **Interactive sessions**
 - All sessions, especially plenary ones, should not only focus on the positive aspects of ICTs, but should also be required to address how we mitigate the negative aspects.
 - Facilitation of a round table for members of academia to discuss ground breaking research in digital skills development.
 - Limit the number of workshops in parallel, and extend the days.
 - Smaller groups for discussion.
 - Panellists should come from different countries so as not to give the impression that WSIS Forum is exclusive to a few nations.
 - Balancing topics by participant's predetermined preferences, and less parallel scheduling for the workshops.
 - Limit the number of participants in each workshop, and by providing a short summary for all workshop so people who couldn't attend can at least have an idea about it.
 - Hands-on learning workshop.
 - Combine sessions of similar nature and limited number of panelists.
 - The time slot allotted for interaction with participants on the floor after presentations must be reasonably extended with the view to getting feedback to balance innovative ideas expressed by speakers from the presentations. This will enable moderators not only report on the summary of presentations by the Speakers but also the inclusive inputs made by participants.
 - Allow space and time for Q&A during sessions/Forums where people can ask questions discreetly.
 - Soliciting real-time questions via social media or other methods.
 - A balanced mix of topical areas during a particular time slot may help to ensure equal participation in Parallel workshops at the WSIS Forum and to consider topical tracks to ensure that similar sessions are held during different time segments.
 - Spread sessions on the same or similar topics on different hours in order to offer the opportunity to attend at least some of them avoiding a full overlapping of parallel sessions.

- **Others**

- Perhaps adding an award which is honorable by the WSIS for the countries that are most dedicated each year in having a clear agenda on how to align with the SDG's. this might be nominated by the ITU and not through applying to the action lines.
- Provide more social opportunities so that people can get together and know each other.
- "Speed dating event" for attendees of the Forum where people gather in a room and convey what they have to offer, what they are looking for and there will be rotations.
- To educate WSIS Forum participants on new and emerging technologies that have a potential to disrupt every aspect of our life such as blockchain, self driving cars, artificial intelligence.
- Pitches of start-ups, NGOs, and other organizations regarding e-learning/digital education, and other SDGs-related.
- Disseminating and promoting recent resolutions issued by the UNGA in ICTs.
- Introduce an award category named Excellence Collaboration Award to share best practices and promote cross-sector collaboration among stakeholders on attainment of the 2030 Agenda.
- To launch a call for 'blog posts' inviting WSIS stakeholders to submit short articles (or a series of articles) to be posted on the Forum's website.

X. Recommended themes and format for the High-Level Segment

A. Topics and Themes for High-Level Segment

The following section provides an overview of the detailed consultation data, provided by WSIS stakeholders, to identify the key themes and/or issues proposed for the High Level Segment of the 2019 WSIS Forum. The proposals submitted revolved around three main subjects: (i) education, (ii) inclusiveness and (iii) frontier technologies.

In particular, there were a high number of suggestions requesting for a review of the use of ICTs in ensuring inclusive and equitable quality education. Issues like e-learning, digital transformation and holistic use of resources that allow for the support of lifelong learning capabilities were brought forward. Digital and online methods have a key role to play in making education accessible for all; however, it was also suggested to hold debates on the need of transforming education and training systems that keep pace with technological advances and move towards more practical, applied competencies and skills.

In reference to the vision of leaving no one behind, our stakeholders asked to address the challenges of inclusiveness in the context of the 2030 Agenda. Some of the proposals for debate were how to close the digital gender divide, how to make ICTs more accessible and beneficial for vulnerable groups like indigenous populations, older persons, refugees and internally displaced people, migrants, people with disabilities and those who live in remote or rural areas.

A review of the advancement of frontier technologies across different sectors of society is also highly anticipated. Some key trends were: Blockchain, Internet of Things, Big Data, 5G, Extended Reality and Artificial Intelligence, particularly:

- i. Blockchain for social good and its intrinsic value in ensuring peace, identity for all, providing transparency to all sectors such as healthcare, education, businesses, government institutions and others

- ii. 5G in advancing high speed, connectivity and how to use it to build auxiliary applications
- iii. Artificial intelligence and Extended Reality in Agriculture, Smart Cities, Health, Education and the Environment

As a direct result of the exploration of the value of emerging technologies, our stakeholders are also aware that there needs to be an assessment of the potential risks they hold in exacerbating technological divides and the cyber legal ramifications of their use. A number of contributions also highlighted the ethics surrounding AI, the legal policy and regulatory frameworks for cybersecurity and other privacy issues.

Finally, stakeholders reiterated that achieving the Sustainable Development Goals by 2030 will require resource mobilization, partnerships and multilateral collaborations. Submissions highlighted the urgent need of open channels of communication and sustained partnerships across the international community to ensure that the gaps in technological capabilities between developed and developing countries are closed. Proposals included the need for a more aligned strategy and policy instruments among UN agencies as well as more sustained collaborations with the private sector.

Further suggested topics included:

- Child protection issues
- Protection of human rights on ICTs offline and online
- The need for internationally recognized regulatory system for drone technology
- Boosting access to power in rural communities via solar energy and fintech
- Enabling environment for sustainable investment in ICTs
- Machine Learning
- ICT in Sports
- Projects involving youth beyond the WSIS Agenda
- The flexibility of ICTs for unleashing of creativity
- ICT to monitor elections, solve unemployment
- The creation of a universal broadband as a key enabler for ensuring healthy lives and wellbeing for all.
- Quantum computing and quantum communications: challenges and potential use cases

B. Suggestions for interactive format of the High Level Segment

The Open Consultation Process yielded a number of proposals to make the High Level Segment more dynamic and interactive. One of the most common suggestions was to utilize social media to allow stakeholders, including youth and off-site participants to livestream and participate in live real-time Q&A.

There was also a notable interest for diversifying the existing Panel format, by creating Roundtables where case studies presenting best practices and challenges are shared.

There was also an expressed interest in extended interaction time with speakers by creating more opportunity for exchange within the different sessions. Many contributors were interested in a higher representation from Youth Groups and the Private Sector as well as a more concrete and deeper focus across sessions.

Other specific suggestions:

- Allow participant to take part in problem solving by question being raised to the audience
- Use of short videos and visuals to keep the attention of receptors
- Speeches can be recorded in advance, displayed in continual running loops throughout the conference location, and made available online
- Dialogue sessions between Start-ups and strengthened authorities

XI. Open Consultation Process Phases

The open consultation process of the WSIS Forum aims at ensuring the participatory and inclusive spirit of the gathering. It actively engages governments, civil society, the private sector, academia and intergovernmental organizations in the preparatory process ensuring multi-stakeholder participation and constant evolution of the Forum.

ITU, UNESCO, UNCTAD and UNDP invited all WSIS Stakeholders to contribute to the Open Consultation Process on the Thematic Aspects and Innovations on the Format of the WSIS Forum 2019. The invitation letter is available here: https://www.itu.int/net4/wsis/forum/2019/Files/Letters/WF19_OCP_Invitation-en.pdf.

The Annual WSIS Forum Open Consultation Process was appreciated by the Stakeholders as a platform that provides an equal opportunity to participate in building the Agenda and Programme of the Forum. Some suggested that the Secretariat explore ways of collecting information from the regional and national levels through effective remote participation including the use of social media and SMS.

The Open Consultation Process for the WSIS Forum 2019 was structured in five phases as follows:

Phase I: Opening of the Open Consultation

The virtual launch of the open consultations took place on Monday, 2 July 2018, 14:30–15:30.

[Open calls for the WSIS Forum 2019 were announced.](#)
[More information available here:](#)
<https://www.itu.int/net4/wsis/forum/2019/Home/Consultations>

Phase II: First Physical Meeting

- The first physical meeting of the Open Consultation Process was held on Monday, 12 November 2018, 12:20-13:20 at UNESCO Headquarters, Paris, France.
- [Presentation.](#)

Phase III: Second Physical Meeting

- The second physical meeting of the Open Consultation Process was held on Thursday, 31 January 2019, 16:00-18:00 at the International Telecommunication Union Headquarters, Geneva, Switzerland.
- [Agenda.](#)
- [Presentation.](#)

Phase IV: Deadline for Submissions. February, 10th 2019

Phase V: Final Brief Meeting

- The final brief meeting of the Open Consultation Process will be held on Friday, 8 March 2019, 14:00–16:00 at ITU Headquarters, Geneva, Switzerland.
- Registration
- Remote Participation
- Webcast

WSIS Forum 2019 Submissions

OPEN CONSULTATIONS ON THEMATIC ASPECTS AND INNOVATIONS ON THE FORMAT

The three following annexes are a compilation of Official Submissions received from WSIS Stakeholders during the Open Consultation Process from 2 July 2018 to 10 February 2019. The document displays overall suggestions for topics to be included during WSIS Forum 2019 and binding requests for Workshops. Please note that the Agenda of the WSIS Forum each year builds upon the submissions received during the Open Consultation Process.

12	Kent State University	Academia	United States of America	In the world of big data, large-scale analytics, and AI, an information society relies upon sticking knowledge for competitive advantage and simultaneously unsticking it for collaborative dissemination. I propose a process reengineering innovation that allows economies to find and allocate the right balance between AI and human agents in managing the cycle of data-information-knowledge-creativity-innovation-data.	Developing and developed countries need and optimal allocation of Human agents and Technology AI agents in managing their information and knowledge processes. the question is, how can countries, in a period of breakneck innovation, manage their resources to create a collaborative agency between ICT AI and human resources to achieve a sustainable, competitive advantage?		This paper presents a systematic approach to unsticking knowledge and application. This paper also uses a process perspective that first draws from semiotics, information systems, strategic management, and organizational theory for theoretical support and then complements this support with current best practices to derive the proposed S-KIM framework for a holistic understanding of creating, managing and disseminating knowledge in a knowledge societies. This framework provides a unified perspective of the KM process by bringing together multiple strands of research and practice across education, trainings, economics, and policy-making. WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

31	Royal Holloway, University of London	Academia	United Kingdom	<p>The main innovation I would suggest at this point in time is that all sessions, especially plenary ones, should not only focus on the positive aspects of ICTs, but should also be required to address how we mitigate the negative aspects. This is especially in the context of (a) their role in increasing inequality, (b) their environmental impact, and (c) the ways through which ICTs are used to cause damage to people (both deliberately</p>	<p>Much more focus on the implications of SDG 10 - and how ICTs can be used to address these. We need to balance the overwhelming focus on the contribution of ICTs to economic growth by paying more attention to how they can be used to reduce inequalities and serve the interests of the poorest and most marginalised.</p>	<p>1. Changing men's attitudes and behaviours. This workshop would be led by our TEQtogether team, with the support of Global Scribes and NYAS, and is part of our contribution to EQUALS. Its premise is that we are not going to make significant inroads into improving digital gender equality until we change men's attitudes and behaviour. The workshop would be in two parts: a short overview of the work of TEQtogether (and possibly some of our partners); and a very participatory brainstorming activity that would develop new ideas which all participants could then take forward to turn rhetoric on this theme into action. 2. As discussed with Gitanjali we are also very interested in working with the team to deliver a contribution to the WSIS Accessibility Day - discussions are ongoing about how best we can contribute. For the purposes of this submission, we will be working with the Inter-Islamic Network on IT who are hoping to be able to fund a small number of people with disabilities to attend (from Pakistan and possible other Islamic developing countries) (see Q23). We are also in discussion with DFID about their participation. We are convening a "discussion" in DFID on 25th January on the theme of "turning rhetoric into reality" with respect to accessibility and disability. The workshop we propose for the WSIS Forum would build on this, and on similar work we have done with INIT in Tunisia,</p>	<p>Very difficult - it is important that the voices of the poor really are "present" and "listened to". One way to do this would be to have pre-WSIS Forum national and regional meetings that then feed in to the Geneva event.</p>	<p>Not quite clear what you mean by "more equal" - it will never be equal across all dimensions - so let's just get on and do something valuable!</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

46	United Nations Office of High Representative for LDCs, LLDCs and SIDS	International Organisation	United States of America	The forum should address the special needs of the vulnerable countries - it should dedicate adequate time to review their ICT development needs and issues and propose how they can be supported.	If WSIS can come up with ICT solutions for LDCs, LLDCs and SIDS it will greatly help achievement of the SDGs by these groups of countries	Strengthening ICT Connectivity and Digital Inclusion of LLDCs Side Event at the World Summit on the Information Society (WSIS) Forum Date and time TBC Venue: Geneva-ITU headquarters (Room TBC) Concept Note The 32 landlocked developing countries (LLDCs) face unique development challenges derived from their geographical positioning. They lack direct territorial access to the sea, are remote and isolated from world markets and depend on neighbouring and coastal countries for access to undersea cables and international internet bandwidths, and for their communication connectivity. Long routes, complicated administrative transit procedures, multiple border crossings and inadequate infrastructure all substantially increase the transport and trade transaction costs incurred by LLDCs. ICT plays a particularly valuable role in helping LLDCs tackle these issues. Thus, improved ICTs are paramount for connecting LLDCs more effectively to international markets, facilitating trade transactions, enhancing the competitiveness of enterprises and fast-forwarding customs and border procedures. ICTs are powerful enablers for the three pillars of sustainable development, and they play a major role in enhancing countries' competitiveness. Connectivity, access and use, ICT infrastructure growth, and broadband provide great development opportunities	If the activities are known it is important to have them presented in a thematic manner - eg. the latest uses of mobile technology in supporting development - have a specific thematic session on this and identify how these innovative uses can be supported and scaled up.	Participants can be asked to identify their areas of interest in advance and if needed a redistribution can be done.
----	---	-------------------------------	-----------------------------	---	---	--	--	--

					<p>for the LLDCs. The ITU 2018 annual report on Measuring the Information Society which features key ICT data and benchmarking tools to measure the information society, and includes valuable information, data and analysis on the LLDCs shows that more than half of the world's population is now online. At the end of 2018, 51.2 per cent of individuals, or 3.9 billion people, were using the Internet. This represents an important step towards a more inclusive global information society. In developed countries, four out of five people are online, reaching saturation levels. In developing countries, though, there is still ample room for growth, with 45 per cent of individuals using the Internet in which the LLDCs also fall under. We need to bring the LLDCs online and "Ensuring that no one is left behind" and that no one is left offline to achieve the 17 SDGs. The digitalization of many logistics services and regulatory border controls increases the efficiency and the ease of doing trade. Technologies like computerised facilitation systems, automated single windows, cargo tracking and e-payments at borders reduce the cost, time and bureaucracy often associated with LLDC border crossings. ICTs can assist the LLDCs improve the efficiency and competitiveness and to exploit economies of scale and network effects, to raise labour and capital productivity, and to access global</p>

					<p>value chains. They make it easier for businesses or consumers to connect with potential trade partners and get information about regulations and standards as well as about consumer preferences. Increased flows of information have tremendously improved access to knowledge about trade opportunities, thereby reducing the cost of entry into the market, in particular for SMEs. Goods and services can increasingly be purchased or delivered through digital platforms. For example, global market places such as Amazon, eBay, and Alibaba are empowering firms in developing countries to scale up their production and engage in international markets. Digital connectivity presents an important opportunity for the LLDCs to increase their share of trade through e-commerce. While digital connectivity opens new markets, physical connectivity can still be an important constraint for countries and firms wanting to trade it is therefore important that good transport systems be adopted so that the goods that are ordered online digitally are able to reach the customers through physical connectivity. Leveraging e-commerce offers an unprecedented opportunity to expand the trade capacity of LLDCs; but it must be supported by an efficient trade and transport system as well as an effective ICT4 connectivity. ICT in the form of e-government, online</p>

					<p>education, agricultural mobile apps, e-health and others can increase the accessibility and quality of services that contribute to economic and social development. The importance of ICT for LLDCs is highlighted in Priority 2(b) of the Vienna Programme of Action for Landlocked Developing Countries for the Decade 2014-2024 (VPoA). This priority relates to the development and maintenance of energy, information and communications technology infrastructure. Specifically, the VPoA calls on LLDCs to make broadband policy universal, promote open and affordable internet access for all and actively engage to address the digital divide. According to ITU data, the LLDCs have made promising strides in ICT connectivity since the VPoA was adopted, mobile telephony subscription rates per 100 inhabitants increased from 81.4 in 2013 to 90.4 in 2017. However, the LLDCs as a group lag significantly behind both developed (128) and developing countries (102). The average internet users increased in LLDCs from 21 per 100 people in 2013 to 29.6 in 2016. However, compared to other groups, the LLDC group lags behind developed (79.5) and developing countries (42). On average, the LLDCs experienced a growth in fixed broadband subscriptions from 3 per 100 inhabitants in 2013 to 4.6 in 2017. However, as with mobile subscriptions, the LLDCs continue</p>	
--	--	--	--	--	---	--

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

					<p>to lag behind other categories of countries. Despite the growth experienced by LLDCs in ICT connectivity, they continue to face a number of constraints which prevent them from fully harnessing the developmental potential of ICT and digitalization. These include infrastructural gaps, relatively high cost of ICT services, in particular broadband services, low digital literacy rates, poor quality regulation and the high cost of accessing submarine cables. Fixed-broadband is particularly difficult for LLDCs to develop because of its relatively higher price in LLDCs as compared to coastal areas. Furthermore, not many people in LLDCs own ICT equipments such as computers and televisions. ITU data on this is available only for 20 LLDCs. On average in these 20 countries, only 29% of households own a computer in 2015. In developed and developing countries, the average computer ownership figures for 2015 were 80% and 33% respectively. In consequence, the digital divide between LLDCs and the developed countries remains substantial and need to be addressed. National backbone infrastructure and international Internet connectivity are critical building blocks to drive broadband demand, access, and use. Growth in broadband subscriptions is accompanied by continuous growth in national backbone capacities and international Internet bandwidth.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

					<p>Data collected by ITU on the deployment of ICT transmission capacity shows that by the end of 2016, more than 10.1 billion km of fibre and microwave backbone transmission networks from 378 operators was available worldwide. While this data does not cover all operators or countries, it highlights the important expansion of and investments in international backbone infrastructure. However, the route metres of fibre and microwave backbone networks per capita remain low in Africa at 0.4 and Asia Pacific at 1.1 where many LLDCs are located. Route metres of fibre and microwave backbone networks per capita are highest in Europe at 4.0. As the LLDCs and their partners prepare to undertake the Comprehensive Midterm Review of the VPoA, it is important to identify ways of addressing the aforementioned constraints in order to facilitate digital transformation in the LLDCs.</p> <p>Objective This meeting aims to provide an opportunity for different stakeholders, including LLDCs, transit countries, development partners, private sector, and the United Nations system to take stock of progress and share best practices in promoting ICT connectivity and digitalization of LLDCs, identify constraints and suggest recommendations to help increase the connectivity of LLDCs, to support their efforts towards achieving the SDGs; and bridge the digital divide between the haves</p>

					<p>and the haves-not. The meeting is expected to yield recommendations which will feed into the preparations of the Midterm Review of the VPoA for the LLDCs. This side event will also seek to identify potential collaboration opportunities between partners on increasing ICT connectivity of the LLDCs. Issues to be discussed: 1. What are the successful experiences and innovative approaches to strengthening digital connectivity for LLDCs since the Vienna Programme of Action was adopted in 2014? What are the challenges and opportunities? 2. What areas of capacity building are needed to strengthen ICT connectivity and digitalization in LLDCs? 3. What are country and regional experience in the area of e-commerce and how can e-commerce and digital trade in LLDCs be further advanced? 4. What are the means and what need to be done collectively to ensure connectivity in the LLDCs? 5. What are priority actions needed to include in the Midterm Review of the VPoA? Expected outcome: the expected outcome of the meeting will include:</p> <ul style="list-style-type: none">• The international community will be sensitized on the importance of prioritising connectivity, access and use, ICT infrastructure growth, and broadband that provide great development opportunities for the LLDCs.• Identification of priority areas, policies and development initiatives for LLDCs at national,

			<p>Solution works, read “Distributing the Internet.” DISTRIBUTING THE INTERNET The Internet is the heartbeat of our daily lives. We depend on it for everything from communications and business to shopping and entertainment. We’re so wired it’s hard to imagine that almost half the world’s unconnected, and some don’t even know there’s an Internet. When we hear “digital divide,” we envision remote farming communities with limited access. But with more than 3.3 billion people without</p>

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

66	Liberia Information Technology Students Union	Academia	Liberia	<p>With the shortage of medical doctors in my country Liberia, I have thought to propose GOAL 3 of the SDGs which addresses Good Health and Well-being. When Liberia and other African countries experienced the deadly Ebola virus, technology innovation was used to link rural dwellers to medical specialist in urban Liberia. We would appreciate the conference speakers providing more insight on e-health.</p>	<p>The forum could better ensure alignment of efforts with the SDG implementation by providing basic talks on the SDGs goals and how they can align with ICT in the rural environment.</p>	<p>By having a clearer picture of your initiative and how it align with the institution you request for partnership.</p>	<p>By encouraging more female applicants, youths and ect.</p>

67	Office of Electronic Communications	Government	Poland	No comments	No comments	Office of Electronic Communications (Poland) is interested in organisation of a workshop preferably on the first day of WSIS Forum (Monday 8th of April, early afternoon) on the topic "Emerging technologies for digital transformation – how to maximize benefits for societies and economies".	<p>1. There should be more information on workshops via newsletters or social media etc.</p> <p>2. One part of the registration could be focused on workshops and possibility to declare interest in participation in selected workshops (this could give general idea which workshops would have high participation and which workshops would require some extra promotion to ensure more equal participation).</p> <p>3. The list of workshops is a very long one which makes it hard to ensure more equal participation. It could be a good idea to try to combine similar workshops (if</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

68	American Tower Corporation	Private Sector	United Kingdom	<p>American Tower Corporation (ATC) reaffirms the values and principles of the multi-stakeholder cooperation model and engagement that have characterized the WSIS process since its inception, recognizing that effective participation, partnerships and cooperation of governments, the private sector, civil society, international organizations, the technical and academic communities and all other relevant stakeholders, has been and continues to be a vital innovation in developing the information</p>	<p>ATC believes that the WSIS Forum's continued emphasis on the multistakeholder process, and the inclusive incorporation of the views of all stakeholders – acts a medium, which fosters partnerships and knowledge transfer in a manner that ensures alignment of efforts with SDG implementation and the achievement of the 2030 Agenda. To that regards we take note of section 4.1 (Paragraph 65) of General Assembly Resolution 70/125 and emphasize the need for enhanced</p>	<p>Proposed Topic: Innovation 4 Digital Literacy Description: The panel will highlight the importance of capacity building initiatives and digital literacy for development. It will invite stakeholders from government, industry and academia to discuss the need for innovation in designing and implementing projects, which aim to build capacities, increase digital awareness and literacy, and bridge the digital divide, with emphasis on interventions in remote and rural areas, and those that impact marginalized stakeholders. Moreover, the panel will aim to provide successful case studies from across the ICT4SDGs and the WSIS ecosystem. Session's Link to WSIS Action Lines: Digital literacy is considered an essential set of skills needed to find information and communicate in today's world. This is key to achieving the WSIS vision of the people-centred, inclusive and development-oriented information society, and the 2030 Agenda plan of action for people, planet and prosperity. Accordingly, promoting digital literacy links directly with WSIS Action Line C1 as it encourages ICTs for development. While digital literacy initiatives link to WSIS Action Line C3 and C4 as they increase prosperity through enabling access to information and knowledge, as well as building capacities by enabling people to improve and retain the skills, knowledge and tools needed to do their jobs competently or to a</p>	<p>A WSIS Blog can encourage relevant stakeholders to advertise their respective initiatives and new partnerships, and more importantly share insight into workstreams that touch on the WSIS Action Lines and the Sustainable Development Goals. As such, ATC encourages the WSIS Secretariat to launch a call for 'blog posts' inviting WSIS stakeholders to submit short articles (or a series of articles) to be posted on the Forum's website. ATC will be happy to become a regular contributor to the blog and can work with our partners and the ITU Communications Secretariat to develop content. Blogs are not new to the ITU system with the ITU Newsblog and the Telecom World Blog being an excellent medium for contributions from ITU Sector Members.</p>	<p>We believe equal, inclusive participation can be enhanced through remote participation and session recording tools. This will help smaller delegations, either participate in real time, or familiarize themselves with the deliberations at a later stage.</p>

69	WSIS Coalition	Private Sector	United Kingdom	<p>The WSIS Coalition reaffirms the values and principles of the multi-stakeholder cooperation model and engagement that have characterized the WSIS process since its inception, recognizing that effective participation, partnerships and cooperation between governments, the private sector, civil society, international organizations, the technical and academic communities and all other relevant stakeholders, has been and continues to be a vital</p>	<p>The WSIS Coalition believes that the WSIS Forum’s continued emphasis on the multistakeholder process, and the inclusive incorporation of the views of all stakeholders – acts a medium, which fosters partnerships and knowledge transfer in a manner that ensures alignment of efforts with SDG implementation and the achievement of the 2030 Agenda. To that regards we take note of section 4.1 (Paragraph 65) of General Assembly Resolution 70/125 and emphasize the</p>	<p>Proposed Topic: Artificial Intelligence and Cyber Security Description: Artificial intelligence (AI) has been hailed as a transformative, revolutionary technology at the forefront of the Fourth Industrial Revolution (4IR). With an expected global economic contribution of USD 15.7 trillion, nations world-wide are striving to utilize the technology for a variety of applications, all of which will have a direct impact on achieving the SDGs. In the emerging discussion, many have noted that AI will transform the field of cyber security by enabling new and more sophisticated vectors of attack, but it will also unlock new tools for governments and the private sector to fend off threats. AI and machine learning can help automate threat detection and, by using a diverse set of algorithms with different training data sets, can be used to defend against different angles of attack and more accurately provide anomaly detection. Collaboration between governments and the private sector and identifying data needs are the first steps towards harnessing the cyber security potential of AI. To achieve this, there is a pressing need for stakeholders to design and implement capacity-building initiatives (for state and non-state actors) that increase awareness of the benefits of AI and mitigate negative perceptions that block its deployment. International organisations based on the</p>	<p>The WSIS Coalition believes that a ‘partnerships’ track can facilitate information exchange on concrete projects at the grassroot level, and foster multistakeholder conversations on innovative cross-sectoral partnerships for implementation. Moreover, the track can provide the opportunity for all stakeholders to present and advertise their WSIS-related projects, effectively increasing project visibility.</p>	<p>The WSIS Coalition believes that equal, inclusive participation can be enhanced through remote participation and session recording tools. This will help smaller delegations, either participate in real time, or familiarize themselves with the deliberations at a later stage, and more importantly will render WSIS Forum content accessible to a wider audience, effectively strengthening the WSIS Plan of Action.</p>

				<p>innovation in developing the information society. We welcome the remarkable evolution and diffusion of information and communication technologies, underpinned by the contributions of both public and private sectors, which enable new business models and contribute to economic growth and development across all economic sectors. Moreover, we are grateful for the renewed opportunity for</p>	<p>need for enhanced cooperation in aligning efforts. Encouraging WSIS participants to highlight and advertise their contributions to the SDGs can result in the emergence of best practice and can lead to synergy alignment, which in turn is likely to increase efficiencies towards achieving the 2030 Agenda. For example, a SDG contribution 'innovation lab' can encourage WSIS participants to sketch their input on an interactive board, etc, with the results being later incorporated</p>	<p>multistakeholder model offer a great platform for such discussions and have a key role to play in devising principles for the development and use of AI. It is worth noting that the OECD and the ITU have both begun to foster collective action in this way. Thus, the panel enquires: How do we maximize technology's ability to ensure peace, justice and strong institutions? How do we promote smart partnerships, including efforts to design and implement principles for AI development? How do we bolster industry innovation in the use of AI? What models of capacity building can we employ to equip users with skills, increase the robustness of the human element in cyberspace and dispel myths about AI? What are best practices for the use of AI in cyberspace? Session's Link to WSIS Action Lines: AI-powered solutions can positively contribute to all aspects of life (WSIS Action Line 7) and increase confidence and security in the use of ICTs (WSIS Action Line 5). Realizing the benefits of AI, however, requires international and regional cooperation (WSIS Action Line 11), capacity building efforts (WSIS Action Line 4) and discussions on the ethical dimensions associated with the use of the technology (WSIS Action Line 10). Session's link to Sustainable Development Goals: Technological progress is key to finding lasting solutions for sustainable development. The increasing use of</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

72	Tigarti	Private Sector	Egypt	N/A	<p>Hosting a workshop on ways in which technology can be applied as part of the solution to international development issues, including the opportunities and challenges presented by E-commerce and E-employment. Some workshop topics could include: Workshop Discussion Topics: 1. Can the benefits of the Technology (mainly e-commerce and e-employment) be used in ways to shrink (counter-act) its negative implication? How? What are the ways in which we can use the advancements in technology to solve international development issues? 2. Will industry 4.0 fast track solving international development issues? How? 3. How can large e-commerce companies (like Amazon and Alibaba) efficiently monitor their vendors? If strict regulations were placed, will monitoring vendors decrease the use of child labor and harmful materials? 4. How can companies use e-employment effectively monitor employees? Will this incentivize companies to take more e-employees? Can this lead to lower unemployment rates, and eventually lower the number of human starvations? 5. How does industry 4.0 relate to e-commerce and e-employment? Since many jobs projected to be replaced by automation and technology, what will that mean for the youth and e-employment? Tigarti has a lot in common with these workshop topics. Discussion point three and four are specifically meant to</p>

					<p>highlight Tigarti's practices. Discussion point three focuses on how large companies can monitor their vendors. Tigarti prides itself in selecting vendors who ethically produce their products and do not use child labor. We do this by relying on our network of vendors, and their reputation within their industry. If industry giants like Alibaba and Amazon enforce similar regulations, we will move closer towards achieving the United Nation's sustainable development goals. A workshop is meant to engage the audience and allow for collective thinking. Below are two ideas of how we can effectively engage our audience in the discussion. This will allow us to lead a more exciting workshop that does not solely rely on lecturing. 1. Brain Storming Exercise: Having paper cutouts of the benefits and challenges created by e-employment and ecommerce. We can then let the audience pair each challenge with a benefit and explain how this benefit can be taken advantage of in ways that can eliminate the challenge, and how does that fit in with the UN's SDGs. 2. Polling apps: Creating a poll where the audience is asked what they would do in certain situations (i.e. Would you purchase a product that clearly states that its production does not follow child labor laws? – from there we can build a connection, i.e. if all e-commerce businesses enforced child labor restrictions on products</p>

79	Terre des Hommes	Civil Society	Netherlands	<p>An online platform where participants can share ideas, get in contact and keep in touch after the conference. This platform should have online profiles of the participating organisations with their expertise listed to enable contact between organisations to share ideas and start new projects.</p>	<p>ChildProtectionand ICT (SDG 16.2)</p> <p>----- In this workshop 3-4 speakers from different NGOs will talk about how they use innovative ICT to combat child protection issues such as child labour, online child sexual exploitation and exploitation of migrant children. Projects to be presented: ChildHub, Sweetie, SaVa and SAP. **Childhub: Platform for Child Protection** Speaker: Sendrine Constant, Head Child Protection Program, Terre des Hommes Lausanne Introducing the use of information technology to facilitate a community of practice in child protection by bringing together more than 3,000 professionals from academia, public institutions and civil society. Moreover, we'll show how an online platform can help build capacity, to enrich practices and create a chain of actors more motivated and better skilled to prevent and respond to different forms of violence against children. **Digital tools for Child labour** Speaker: Peggy HERRMANN LJUBICIC , Head Child Labor Sector, Terre des Hommes Lausanne [SAP] In practice Child Labour Monitoring (CLM, in French SAP) involves the identification, referral, protection and prevention of children affected by or at risk of child labour through the development of a coordinated multi-sector monitoring and referral process, aiming to cover all children living in a given geographical area. Its principal activities include</p>	<p>allowing participation through online fora accessible through mobile phones during the workshops</p>

84	IEEE	Academia	United States of America	<p>In WSIS Forum 2019 programming, IEEE proposes the inclusion of content covering emerging technologies and the ethical and societal implications of ICT development and use. IEEE proposes the use of interactive sessions for both in situ and remote participants in order to thoroughly engage all attendees of the WSIS Forum 2018. In particular, IEEE proposes a specific focus on all types of diversity in order to assist in bridging both the digital and gender divide, as well as engagement of all of the</p>	<p>IEEE suggests incorporating as many of the SDGs into the WSIS Forum 2019 because of the far reaching effect that ICTs can have in achieving the SDGs. For example, the ICT industry can assist in achieving Goal 12 (Ensure sustainable consumption and production patterns) by working to find more environmentally friendly manufacturing and disposal of ICTs. Also, ICTs will likely be vital to achieving Goal 13 (Take urgent action to combat climate change and its impacts) for many purposes.</p>	<p>Autonomous and Intelligent Systems in the Digital World: Moving from Principles to Practice Autonomous and Intelligent technical systems are specifically designed to reduce the necessity for human intervention in our day-to-day lives. In so doing, these new systems have raised concerns about their impact on individuals and societies. Current discussions include advocacy for a positive impact, such as optimization of processes and resource usage, more informed planning and decisions, and recognition of useful patterns in big data. Discussions also include warnings about potential harm to privacy, discrimination, loss of skills, adverse economic impacts, risks to security of critical infrastructure, and possible negative long-term effects on societal well-being. Because of their nature, the full benefit of these technologies will be attained only if they are aligned with society's defined values and ethical principles. As the use and impact of autonomous and intelligent systems (A/IS) become pervasive and will affect many aspects of our lives, the need to establish societal and policy guidelines in order for such systems to remain human-centric, serving humanity's values and ethical principles has emerged. What also has emerged is the development of a host of frameworks and principles to guide development and use of such systems so that they operate in a way that is beneficial to people</p>	<p>A session could be held that provides stakeholders working on these activities to present their work in a brief description to all stakeholders the opportunity to present with the event followed by a networking event for those that the presented and any other interested stakeholders to find ways to potentially collaborate and improve these activities. In addition, a project pavilion could be utilized to allow individuals and organizations to showcase their work and interact with other attendees.</p>	<p>A balanced mix of topical areas during a particular time slot may help to ensure equal participation in Parallel workshops at the WSIS Forum and to consider topical tracks to ensure that similar sessions are held during different time segments.</p>

				<p>various stakeholders.</p>	<p>and the environment, beyond reaching functional goals and addressing technical problems. But how do we practically implement these frameworks and principles to foster a heightened level of trust between people and technology needed to realize the positive and fruitful use in our daily lives—and how do we put principles into practice in our collective efforts to achieve the Sustainable Development Goals? This thematic workshop will be set in the context of the Ethically Aligned Design, First Edition: A Vision for Prioritizing Human Well-being with Autonomous and Intelligent Systems, produced by the open global community of the IEEE Global Initiative on Autonomous and Intelligent Systems. The speakers will provide real-world examples of how to move frameworks and principles into practical application. In an interactive dialogue with the audience, they will discuss recommendations in values and intentions in ICT design, as well as implementations across sectors, industries, and stakeholder communities—contributing to practical guidance on what every group involved with and/or affected by A/IS and related technologies can do for society to advance in positive directions and contribute to advancement of the SDGs.</p>

86	World Benchmarking Alliance	Civil Society	Netherlands	Introduce a collaboration portal or collaboration hour for those seeking to meet potential collaborators for projects.	Introduce sessions that focus specifically on each of the 17 SDGs.	<p>Title: "Benchmarking Company-Level Contribution to Digital Inclusion and SDGs" Abstract: It is widely acknowledged that the benefits from ICTs are not equally enjoyed across countries, regions, and people from different walks of life, hampering the potential of these technologies for SDGs. Individual companies are taking steps to foster greater inclusion in a variety of ways but there are no systematic and transparent mechanisms to track these efforts and to harmonise the metrics for impact across the industry. To address this gap, this workshop discusses an initiative by the World Benchmarking Alliance to openly develop and freely publish a global, company-level benchmark that seeks to demonstrate corporate contribution to digital inclusion. The panel will discuss a comprehensive benchmarking framework for digital inclusion that encompasses access, skills, use and innovation. The discussion is guided by the following questions: 1) How can individual ICT companies such as device manufacturers, network providers, and content and platform giants contribute to digital inclusion in their daily operations, CSR activities and public policy advocacies? 2) Why is there a need for a comprehensive measurement approach to digital inclusion that goes beyond issues of access and acknowledges the importance of also closing the skills, use, and innovation divides? 3) How can</p>	More networking opportunities, and encourage participants to provide a profile as well as list of interests for connection.

88	Internet Society	Academia	Switzerland	na	na	<p>Topic Community Networks and Conencting the Last Billion Description: Community networks are local access networks developed by local communities, with local communities, for local communities. The people developing CNs are working with policymakers and regulators who, in turn, are enabling communities to connect via community-built network. Through common sense regulatory and policy change and dialogue with community network advocates, government can unleash the potential of community networks and allow unserved and underserved areas to realize the transformative benefits of having access to affordable connectivity. To truly connect everyone, everywhere, community networks must be recognized as a viable way for the unconnected to connect their communities. This is a paradigm shift where the focus is on allowing communities to actively connect themselves. To achieve this paradigm shift, policy makers and regulators should recognize that connectivity can happen from the “village” or “community” out – where the last mile is essentially a “first-mile,” where citizens build their own networks. Community networks are complementary to traditional, commercial telecommunications networks. This workshop will focus on the importance of enabling access to spectrum, including utilization of currently unused spectrum,</p>	na	reduce the number of workshops. Perhaps spread out the themes?

94	Delegation of the European Union	International Organisation	Switzerland	I have no suggestions are this will be my first attendance.	I am rather wondering how the WSIS forum and SDGs could be reflected in the report to be presented by the UNSG's high level panel on digital cooperation	"Better Internet for Children: EU perspective" The internet provides a growing number of opportunities, ranging from learning, to communication, creativity or entertainment. But it also opens up certain risks to vulnerable users such as children. Indeed, one out of three internet users is a child. They discover internet at ever younger age, and spend online an increasing amount of time. New technologies such as artificial intelligence or virtual reality change the way we, including our children, engage and interact in society. Furthermore, children online can be exposed to harmful content and behaviour such as cyberbullying, sexual harassment, pornography, violence, or self-harm. Efficient responses are needed to prevent negative consequences for their cognitive, social and emotional development. The European Union pays due attention to making internet safe for our children, mostly through its strategy for a Better Internet for Children. The European Commission also co-funds Safer Internet Centres in Member States (coordinated by Insafe), with the Better Internet for Kids portal that endeavours to raise awareness and provides a hotline for victims of online abuse. Moreover, the European Commission is facilitating a self-regulatory initiative, the "Alliance to better protect minors online", with leading ICT and media companies, civil society and industry association, which tackled

					<p>harmful online content and behaviour. An essential element of online safety is awareness raising. Starting as an initiative of the EU SafeBorders project in 2004, Safer Internet Day has grown and is now celebrated in more than 100 countries worldwide. While there is a growing awareness of the issue, a comprehensive international cooperation towards safer internet for children has not been put in place. This event will showcase the EU's Better Internet for Children policy. Participants will share best practices from the European Union and its Member States, which will be followed by a discussion about possible further international cooperation on the matter especially focusing on developing countries. The debate particularly discuss this matter in view of UNSG's High Level Panel on Digital Cooperation work, having as objective raising awareness about the transformative impact of digital technologies across society and the economy, and contribute to the broader public debate on how to ensure a safe and inclusive digital future for all. Proposed panellists: The panel will include representatives from the European Commission's Directorate General Communications Networks, Content and Technology, as well as from the EU Member States' authorities, civil society and private sector.</p>

103	ITU-T Joint Coordination Activity on Accessibility and Human Factors (JCA-AHF)	International Organisation	Switzerland	Following up process of implementation status.	<p>Several WSIS Action Lines address issues related to ICT Accessibility for persons with disabilities and for persons with specific needs, especially highlighted in C2 and C3 and that are linked to all SDGs. SDGs also mention Disability explicitly 11 times, namely SDG 4 Education, SDG 8 Employment, SDG 10 Reduce Inequality, SDG 11 Inclusive Cities, SDG 17 Means of Implementation, and in the SDG data collection and reporting (reported in IGF DCAD paper on SDGs). This shows that ICT</p>	<p>ITU-T Joint Coordination Activity on Accessibility and Human Factors (JCA-AHF) is a cross-sector coordination group that aims at raising awareness and contributing to better collaboration and cooperation amongst groups considering accessibility and human factors. JCA-AHF would like to propose two accessibility workshop sessions: - Workshop on accessibility for emerging technologies ICTs play an important role to remove existing barriers faced by persons with disabilities and persons with specific needs. However, with a rapid evolution of emerging technologies, it is necessary to ensure that all stakeholders consider accessibility by design, to avoid creating new barriers caused by new technologies. To this end, JCA-AHF would like to address accessibility considerations for a variety of emerging technologies at WSIS Accessibility Day. - Workshop on telecom relay services Telecommunications relay services are essential telecom services that enable persons who have hearing or speech disabilities and who otherwise would be unable to engage in voice telecommunications, to make voice telephone calls to other persons using four common types of relay services: text relay; video relay; captioned telephone service relay; and speech-to-speech relay. ITU-T F.930 "Multimedia telecommunication relay services"</p>

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

				<p>Accessibility is cross-cutting issue, and the SDGs would not be achieved without ensuring ICT Accessibility by design. However, much effort is still to be made in a range of areas for ICT Accessibility. For the successful achievement of the 2030 Agenda, WSIS Forum could bring discussion on key areas of ICT accessibility, share information on good efforts, identify next steps and promote collaboration.</p>	<p>describes them. As highlighted at the ITU-EU event titled Accessible Europe 2018, less than 20 countries provide telecom relay services with equal functionality, which means the rest of countries don't comply with UNCRPD. The session will focus on how to promote implementation of telecom relay services worldwide, especially in developing countries. It will identify barriers, needs and consideration for better understanding. The session will be led by Nippon Foundation, ITU-T Q26/16 (Accessibility) and JCA-AHF.</p>

105	United Nations Development Programme (UNDP)	International Organisation	United States of America	NA	NA	<p>Digital Transformation as Sustainable Development Pathway. A Two-hour workshop hosted by UNDP and Estonia e-Governance Academy with ITU [and select UNGIS Members]. New technologies are transforming economies and societies across the globe, shaping a future that is irrevocably digital, increasingly connected and on constant hyperdrive. The prospects of many, of whole economies and societies, will depend on how effectively governments, stakeholders and development partners respond to technological trends, and to the interplay of these trends with other major trends (such as urbanization, changing nature of work, demographic shifts, climate change, increasing magnitude of disasters, environmental challenges, among others). For developing countries that deal with concurrent priorities in the midst of significant constraints, embarking on digital transformation as a sustainable development pathway is a serious challenge. There is need for 1) models that speak to their local and national contexts; 2) tools that assist assessment of unique needs and development of relevant solutions; 3) partners able to not only impart but to collaborate on strategic application of knowledge and expertise; and, 4) support in ensuring that efforts link to priorities on the ground and advance the global Sustainable Development Goals. This workshop</p>	NA

106	WeRobotics	Civil Society	Switzerland	<p>Emerging technologies such as drones that allow to acquire data in an efficient, timely and affordable way for an array of local stakeholders and AI to help automate analysis.</p>	<p>Title / topic: How to automate analysis of aerial data in the context of Aid & Development Overview: Evidence-based decision making allows for adapted and more efficient solutions for a range of aid & development issues and sectors such as disaster management, conservation, agriculture and resilient city planning. Easier availability of geospatial data through satellite and drones provides government and civil society with an important data source to support evidence-based decision making. However, it also creates a new bottleneck as the challenge has shifted from “no data” to “too much data”. Leveraging AI to support more automated analysis is therefore the next step to take. In this workshop, we will present use cases of existing solutions and address the current advantages and challenges of using machine learning in conjunction with drone and satellite data, including in environments with low bandwidth.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

112	Oslo Metropolitan University	Academia	Norway	Continue to develop opportunities to exchange innovations in universal design with a particular focus on technology transfer and social innovation.	Take into account state-of-the-art research that shows how universal design can act as a mechanism for sustainable development through social innovation and technology transfer.	I would like to propose two topics listed below: Universal Design for Sustainable Development Universal design is an approach to creating information and communication technologies (ICT) that ensures everyone can use ICT equally, no matter their disability, age, ethnic identity, gender, or any other characteristic. This track focuses on how the principles of universal design, as articulated in the United Nations Convention on the Rights of Persons with Disabilities, can be adopted in practice, and how social innovation and technology transfer between the Global North and Global South can promote equal participation for everyone in society. With a particular focus on the role of universally designed technology in realizing the Sustainable Development Goals (SDGs), panelists will present state-of-the-art that address SDG 10 Reducing Inequalities, SDG 3 Good Health and Well-Being, SDG 5 Gender Equality, SDG 9 Industry, Innovation and Infrastructure, and SDG 4 Quality Education. Based on the latest empirical evidence, G. Anthony Giannoumis (OsloMet), will present the state-of-the-art on "Universal Design as a Mechanism for Sustainable Development". Shadi Abou-Zahra (TBC-W3C) will follow by presenting the latest research on "Web Accessibility in Sustainable Development". Michael Nique (TBC-GSMA) will then present "Accessible Mobile Technologies and Sustainable

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

115	International Federation for Information Processing	International Organisation	A United States of America	<p>WSIS is a great forum for people from different international organisations to get together. This time we are proposing a workshop with UNESCO and participants are from UNESCO, UN Women and IFIP and possibly from NPO. We appreciate ITU for providing such an opportunity and expect to have more opportunities for collaborations with diverse organisations. From this view points, you could provide more social opportunities so that people can get together and know each other. At the moment, it is</p>	<p>It might be interesting to ask workshop and session organisers to raise any issue which cannot be categorized in the current SDGs so that we could contribute the future SDGs. Meanwhile in terms of disaster, SDG11 is supposed to deal with this aspect. On the other hand, disaster issues are so diverse, it could include education, health and all the SDG issues other than SDG11. Grouping SDGs according to applications and requirements would lead a novel view to SDGs.</p>	<p>We propose for an IFIP and UNESCO Workshop on Media and Information Literacy empowered by Artificial Intelligence for Diversity and Disaster IFIP organized the workshop on Digital Equity and Inclusion for ICT in Disaster Risk Reduction at WSIS2018 last year with speakers from UNESCO and UN Women. This time as our second trial we have the workshop with the same members from the last year as well as with new participants. This time we look into media and information literacy empowered by AI for diversity and disaster. Recent literature discussed diversity computing and the importance of developing systems “by design” from the diversity viewpoint [1]. Regarding disaster, IFIP has organized the conferences on IT in Disaster Risk Reduction (ITDRR) since 2016. Inclusion issues for disaster communications were introduced [2] at ITDRR2017 held in October 2017 in Bulgaria. In this workshop, we have speakers from UNESCO who are working on media and information literacy empowered by AI for children at disaster. Another speaker from UN Women working on diversity aspects. We also have some other speakers working on diversity and disaster. All together, we would like to present media and information literacy issues in terms of diversity and disaster. We are planning one more speaker from NPO, Pangea, who is working on diversity issues in the developing countries [3].</p>	<p>You could invite more people from NPOs, so that they could provide real issues from their experiences. You could provide the participants with social opportunities for getting together, so that the attendants to get together and to know each other. Academic international conferences do provide such opportunities.</p>	<p>You could provide videos after the workshops in open spaces so that people could catch up with them indicating how to get in touch with the workshop organizers when they missed to attend. You could locate workshops with similar keywords nearby physically so that one can pop in and out the workshops easily.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

124	UNESCO	International Organisation	France	<p>Data and Analytics for Scientific Knowledge transaction within the broader framework of Sustainable Development Goals are important tools yet these are still poorly understood terms. There is an urgent need for developing consistent policy framework, upstream capacity building , and improving understanding on data packaging, data policy and forging collaborations between stakeholders. More specifically, 1. Coordinate global, multistakeholder policy development approaches</p>	<p>With the increasing concern for scientific information required for SDGs and its direct bearing on Big data and analytics. A cross cutting session linking these issues with sustainable development should be considered rather than limiting them as an action line centric sessions.</p>	<p>Title of workshop: Access to Scientific Information – Are we addressing Global South and SDGs? Action Line(s): Access to Information and E-Science Summary of workshop (1-2 paragraph overview) Inclusive Knowledge Societies are societies in which people have ready access to information and to communications resources, in languages and formats that suit them, the skills to interpret and make use of them. The theme of inclusive Knowledge Societies will continue to be at the heart of UNESCO’s work to fulfil WSIS objectives. Within this framework, promoting strategies for enhancing access to scientific scholarship to the Global South will remain as a central focus of UNESCO ‘s works. UNESCO continues to pursue this objective through its own programmes on open science as well as in partnership with other organizations and UN agencies. Of late, global effort has culminated in significant progress in opening up and enhancing access to science. However, there still exists a critical need to create an inclusive mechanism for open science within the broader framework the 2030 Agenda for Sustainable Development. This effort must promote collaborative intra-regional and inter-regional actions and must contribute to the democratization of both knowledge generation and knowledge utilization processes. This would require processes that are inclusive,</p>	<p>Report to CEB should be more punchy and media coverage more wider.</p>	<p>pre registration and by requesting priority sessions</p>

125	JOZU for WOMEN INC	Private Sector	AUnited States of Americatralia	Supporting SDGs 3, 5,9,11,16, and 17, we propose the opportunity to present our safety platform as the WSIS attracts delegates from all over the world who for the purpose of the meeting will travel. Some of the delegates may feel vulnerable in a foreign city because of a lack of relevant location-based information. Safety is a paramount concern for many from developing nations who are unfamiliar with Geneva. We'd also like to work with the WSIS Forum to improve delegate	The WSIS Forum can continue to showcase innovation and ideas that articulate how human- centric technology can impact the SGDs and facilitate a wider dialogue wherein leaders, entrepreneurs and policymakers can find new ways to deliver on the 2030 agenda.	The Internet of Things - Bridging the gap between human experience and hardware to reduce violent crime and trafficking.	As mentioned, we'd like to launch WanderSafe at the WSIS Forum, and present how we are transforming personal safety, developing smarter cities, enhancing wellness and well being. The impact of the WanderSafe ideal and the ability to translate back into the countries of the delegates would vastly improve the speed for which we reach our billion lives impacted.	Having a diverse group of speakers and gender parity, and including topics and showcasing solutions and innovation that are at the leading edge will improve participation on a wider scale.

128	Aastha Engineering Solution Pvt.Ltd.	Private Sector	Nepal	<p>My agenda is based on 'ICT Intervention in ground roots for promoting small enterprises'. My thought on this topic can be summarized in the slogan 'ICT in village: ICT for purpose'. I have concluded this concept in the base of my professional experience of working in rural communities of Nepal for 10 years. The prime concerns of grassroots people are lack of proper knowledge in their own enterprises/activities, poor infrastructure, poverty, lack of access to market and consequently their inability to commercialize</p>	<p>Outcome Document of the High-level Meeting of the General Assembly on the Overall Review of the Implementation of WSIS Outcomes clearly accepts that ICTs can accelerate progress across all 17 SDGs. To meet the SDG 2030 agenda, the alarming question is when? How? Where? And who? will provide the cost friendly, user friendly, effective and productive ICT network to grassroots people. Again, I am talking in the base of my experience, it is too expensive to use internet facilities in rural Nepal</p>	<p>ICT in grassroots: Entertain tool to Entrepreneur tool</p>	<p>WSIS Forum should highlight the initiatives and programs worldwide that can become key stakeholders and partners in helping countries to develop their digital platform and help them to create useful project at the grassroots level. I think WSIS should need to pick up some innovative ideas on "ICT on Grassroots" and have to implement in new areas and need to follow its activities after completing the forum too.</p>	<p>WSIS forum need to select the participates according to their interest, experience, plan and dedication in their corresponding activities. They need equally to be trained well regarding the purpose of topics selected for parallel workshop too. WSIS can already collect the priority of the participates in subjects of parallel sessions.</p>

133	The Ministry of ICT	Government	Iran	<p>There are many serious challenges that the world is facing now. We recognize that ICTs are indispensable in achieving SDGs, but at the same time may cause significant and serious problems as well. We are of the view that WSIS forum is the appropriate place to discuss such challenges and share experiences in achieving SDGs. Of course, we realize that it may not be practical to address all such challenges, and for this reason, we propose to focus on the more vital ones, some of which are proposed in</p>	<p>Please see our answer to Question 1 above</p>	<p>The titles of our proposed panels are as follows: 1. The Future of Jobs: Opportunities and Challenges in ICT-Centric Economies ICTs, robotics, artificial intelligence (AI), big data analytics, Internet of things, future generation of networks and other advanced technologies, tools, and services are indispensable in achieving the sustainable development goals. Utilizing such advances have significant impacts on the job market, namely considerable new job opportunities will be created, and at the same time many conventional jobs may become irrelevant and redundant. The negative impacts are expected to be more severe in small shops and stores, where competition with virtual on-line stores seems to be impossible. A paradigm shift in our approach to the issues affecting the labor market, including new vision of workplace and a fundamental revision of vocational training and university education are inevitable. In this panel, we will discuss the above issues. Panelists will include international renowned experts from the academia, industry, service providers, and relevant organizations, including the International Labor Organization (ILO). 2. Digital Nations: Best Practices and Case Studies Many countries have made digital transformation of their societies a high priority in their endeavors to leapfrog the existing barriers and constraints, and improve their</p>	<p>We believe WSIS forum, and particularly its High-Level Segment provide a unique opportunity for networking and sharing experiences in meeting the challenges, removing obstacles, identifying resources, and discussing innovative approaches for utilizing ICTs and achieving SDGs. Hence, the presentations in the High-Level Segment should be planned to provide this opportunity to all participants in the WSIS Forum.</p>	<p>We propose to invite internationally recognized panelists with well established and proven past achievements for all panels / workshops. Otherwise, the participants would attend those panels / workshops whose panelists are better recognized. At the same time, panelists should come from different countries so as not to give the impression that WSIS Forum is exclusive to a few nations.</p>

			<p>together all the interested parties with their different views in relation to the critical policy issues and the challenges they represent. - Links are established with other relevant policy processes where topics relating of the information and knowledge societies are taking place, such as the UN Secretary-General's High-level Panel on Digital Cooperation, High Level Political Forum for follow-up and review of the 2030 Agenda for Sustainable Development and the Sustainable Development</p>	<p>more efforts are needed to establishing updated, comprehensive, satisfactory and timely pools of data (based on quantitative measurements and qualitative assessments). The recently approved UNESCO set of Internet Universality Indicators constitutes a valuable tool for assessing internet development. The WSIS Forum is an important platform to promote adoption of the indicators, discuss the needs and challenges in relation to their application and implementation and share perspectives</p>	<p>will focus on the socio-economic impact of shutdowns, technical aspects of shutdowns, testing and measuring and circumventing where possible and legal and lobby strategies to keep the internet open. It will also focus on strategies to pressure government figures, evaluating needs for effective circumvention tools and VPNs, capturing data about shutdowns, and storytelling for change. The panel discussion will be followed by a 60-minute participant-driven process whose agenda will be to introduce attendees to the 13 principles of the AFDEC and how they can use it to campaign for an open and relevant internet in Africa. Participants will be then be provided with an opportunity to endorse the AFDEC and propose how they can use the Declaration to respond to threats of internet shutdowns as well as design campaigns that can enhance the potential contribution of the Internet to Africa's social and economic development needs and goals.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

138	Geneva International Model United Nations	Civil Society	Switzerland	<p>In an increasingly globalized world, which is constantly shaded under the threat of conflicts and inequalities, communication and cooperation has a significant role. Therefore, there is no doubt that “constructive and diverse inputs from governments, the private sector, civil society, international organizations, the technical and academic communities, and all other relevant stakeholders, in taking stock of the progress made in the implementation of the outcomes of the WSIS and addressing</p>	<p>It is indisputable that in an increasingly globalised inter-connected world, ICTs play an important role in development and innovation. Among the range of work of the ITCs, the most significant one may be their major contribution to spreading information and knowledge. There are different ways to strengthen the alignment with the adopted SDGs. Nonetheless, the WSIS Forum could concentrate on two areas of action, in which it counts on an advantageous</p>	<p>“In promoting peaceful and inclusive societies for sustainable development, the 2030 Agenda places critical attention on building effective, accountable, inclusive institutions at all levels, as stated in Goal 16. In implementing the 2030 Agenda vision to lift people out of poverty and provide opportunities for prosperity to all while protecting our planet, the public institutions shall expand the access to quality public services, particularly for vulnerable groups.” (UNDESA, 2018 : 104, United Nations E-Government Surveys) Vulnerable groups include poor, refugees, older people, persons with disabilities, women and youth. According to the United Nations e-Government Survey published in 2018 more countries are investing in online services that are designed and targeted for the aforementioned groups. The offer of online services that targeted young people has almost doubled since 2016, last year being present in 144 different countries. At its core, the implementation of ICTs by governments has a noble purpose: leaving no one behind. It is worth considering that a better e-government offer, and thus improving access to information and public services may have a positive impact on youth participation in the decision-making processes, therefore leading to better public policies. As written in the World Bank’s World Development Report, “full benefits</p>	<p>Building national capacities in technology and innovation is crucial for local industries and projects to compete in today’s global, knowledge-based economy. This can increase living standards, reduce poverty and promote a Government’s growth. Making effective use of innovation requires factoring scientific and technological knowledge into national development strategies and plans. Assimilating, disseminating and applying scientific and technological knowledge and building capacities in these areas, though, require investment in human capital and infrastructure (according to the UNCTAD project on Science, Technology and Innovation Reviews). • This capital and human infrastructure can be ensured by specific policy-making on this matter to promote technologies, for instance: “After the</p>	<p>The GIMUN procedure to ensure equal participation in the parallel workshops when organising an event is to set a previous registration, where participants are asked to list in order of preference two to three choices. Afterwards, the organising team will create even teams, always taking into account the preference of the participants.</p>

141	University of Geneva	Academia	Switzerland	<p>As this is the first time that I will participate into the WSIS Forum, I am not able to make suggestions at this stage. It will be my pleasure to answer this question after attending the WSIS Forum 2019.</p>	<p>Please see below the answer to question no 8.</p>	<p>Cybersecurity and AI: how to allocate liability between stakeholders. This workshop has the general goal of bringing together academics, authorities, legal experts and representatives from the industry and of proposing solutions for the allocation of liability in case of cybersecurity breaches involving AI (used either by stakeholders to enhance cybersecurity, or by cyber attackers to breach security systems), based on concrete use cases (e.g. when an automated vehicle has deficient sensors or embedded softwares that may be hacked, or when a service provider is used as a Trojan horse by cyber-attackers). The workshop has the particular goal of defining the appropriate diligence required to bolster cybersecurity: what degree of diligence shall be expected from the relevant actors so as to deserve legal protection or be shielded from legal liability? Another challenge is to assess the legal consequences of cyberattacks in terms of civil liability: who shall be liable for cyberattacks, under what conditions, and what would be the consequences of such liability? After a short presentation of the liability regimes in case of cyber security breaches (including data protection, tort and contract law, software liability), the discussion will be enriched with case studies that experts will comment from a technical and legal standpoint and provide their insights/strategies to mitigate the</p>	<p>I would suggest to introduce a WSIS mobile application where the app user can manage the topics of his/her interest. Based on the sophistication of the application, many activities can be communicated to the participants while the latter will be able to attend events, watch on line the activities of the contributors, follow up on projects and discussions, be informed about partnerships for implementation and finally, network with other attendants. An event management app that I have used in the past is WHOVA https://whova.com/</p>	<p>Participants coming from developed countries sponsor other participants from developing countries, LDCs etc. Also, the workshop organizers are provided with a list of experts from developing countries and they are encouraged to include those experts at the workshop (again the application can be a useful tool to register the experts and disseminate their names to potential workshop organizers)</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

152	ICANN	Academia	Switzerland	<p>The WSIS Forum primarily derives its strength and success through the participation of a diverse range of actors in the ICT space. To continue to flourish the Forum must reach out even further into communities and groups of stakeholders who, while relying on ICTs, are not currently engaged. This of course includes those involved in development work globally and government officials from a diverse range of backgrounds. We should also position Forum more closely to SDGs through</p>	<p>It is apparent, even within Geneva itself, that there are a number of agency, business and other initiatives dedicated towards capacity building for ICTs which are not totally aligned. The Forum could be a key venue at which the different agencies and organisations came together to discuss what they were doing in relation to ICTs, and where they were doing it.</p>	<p>We would like to apply for two Thematic Workshops; . The first (organised primarily by ICANN staff) is on “Capacity Building for governments on technical Internet Issues” The complexity of the Internet technical and economical ecosystem represents a real challenge for public policy makers, who wants to develop efficient policies and to avoid any unintended consequences. In this regard, the Session organized by ICANN, and including colleagues from ITU and other IGOs, will give an overview of the capacity building programs led by several organizations, in order to support governments in the context of growing legislative and regulatory activities related to Internet issues. This Session will discuss several approaches for capacity building programs for governments. and will explore potential synergy between those programs. The second (organised with our Cross Community Working Group (CCWG) on Internet Governance) is on “ICANN, the GDPR and WHOIS” and will explore the current developments within ICANN since the coming into force of the European Union’s General Data Protection Regulation (GDPR) in May 2018. It will also provide an update on the current Policy Development process (EPDP) to advise on permanent changes to the way in which registrant data is captured and displayed on the “WHOIS”</p>	<p>. Here; we do not think the HL Track should be used for regional or national presentations (le no long statements on national Broadband plans) but clearly there is scope for such sessions in Workshops. Though here they must be interactive and not Information sessions. Countries could also have opportunities of talking on national plans at their booths (see below) or perhaps in Flash Sessions? Is there room for these in a space? We could create a stronger online network of grass-root level participation (associations, projects...) perhaps through seeking people to create national and regional networks in their own regions.</p>	<p>There will have to be some prior requirement to detail panel composition ahead of the Forum itself</p>

Regionally managed responsible data and research to secure regions with globally collaborative efforts (education, infrastructure building, adjusting, maintaining and developing with innovative research; regionally managed and driven initiatives with global share for global understanding and appropriate actions to take holistically; financially supported by developed</p>	<p>Your identity development is the critical importance in digital era. We are at existential crisis. Global society is responding and being affected by the high tech and information business advancements that are impacting everyday in humans, and society, and culture and civilization all together. 1. We need to become neoteny, continuously learning and developing as we have wanted, keep child-mind and metamorphing as already we are doing to cope with the rapidly changing demands of our jobs, ways we interact and communicate in the world. 2. We need a consensus or a direction to point to the which kind of future we want to build as our global society. When we can have consensus and share common destiny, our individual life long development transform in unison become in unison, not crashing among us, transformation. Thus the consensus building is critically important. 3. That is political maturity. This includes education, life-long learning, sharing values, express self appropriately constructively for the (future) global good, better. This requires funding, cultural change to thrive together for all, not only for the own state or regions. Pay responsibility and care, actions, decision at all levels cohesively without conflict. This requires compromise and dialogue. We have technology for this. This is true innovation. We should use technological advancement for this</p>	<p>It is important to connect different summits and conference from different regions and different ideas / orientations, particularly young, female, periphery with true voices that express the needs that are felt by citizens which globally. citizens feel the needs. This could include: Raisina; RightsCon;</p>	<p>Information must be properly spread. Early preparation and reasonable advertisement of the events and sessions with clear message or issues are important. Earlier setting of particular agenda with challenging exciting sub-title of the meeting could be helpful, perhaps. At the end, the quality of the summit matters. If participants could are expressed / achieved their own goals / fulfilled their concerns / felt new active responsible insights/ agenda which they are to be able to bring back to their own responsible organization / institution / society, the meeting and contacts at the summit continue. Depending on participants'</p>

UNU-EGOV and ITU would like to propose jointly a workshop dedicated to the ongoing work on Blockchain for cities (B4C) which is being carried out as part of the United Smart Sustainable Cities (U4SSC) Initiative. The U4SSC is supported by the 16 United Nations agencies and programs and provides a global network of experts in multidisciplinary areas from more than 20 countries. The workshop proposed for the WSIS Forum 2019 aims to discuss the transformative effect of blockchain on smart, sustainable cities. Blockchain arises as a technology enabling the more efficient and secure exchange of values in respect of privacy and transparency contributing this way in the improvement of a variety of smart city services (e.g., smart public services, smart home, smart industry). However, our knowledge about blockchain technology and how it can transform our context remains limited. The dominant approach of the use of blockchain in cities is focusing on the technological perspective and the possible benefits related to the technology itself, leaving behind any contextual considerations related to the city challenges, the relevancy of the technology for the</p>	NA	NA

166	International Foundation for Electoral Systems	Academia	United States of America	<p>ICTs are an opportunity for advancing the SDGs as well as a new risk. The issue of online harassment, hate speech and violence targeted at women in politics has rapidly gained recognition. In the course of the last few months alone the issue has gained increasing visibility at the UN, with the release of the Special Rapporteur on VAW report and recommendations in October 2018, and a UNGA resolution addressing VAWP for the first time, in December 2018. A SRVAW report the previous year discussed online violence. This</p>	<p>Just as ICTs are used to perpetrate violence against women in politics (posing a barrier to the realization of SDG 5), the responses that exist to respond to this threat draw on innovation and digital activism . To best understand this nexus, the WSIS Forum may align efforts with SDG implementation in the area of digital threats and ICT-based solutions around the issue of online violence against women in politics towards the achievement of the 2030 Agenda.</p>	<p>Online violence against women in politics silences women’s voices and prevents them from exercising their civic and political rights. Digital technologies are weaponized to attack women who break social norms and enter the political space as candidates, activists, journalists and other roles. In response, innovative global responses are emerging to fight back and stop “VAWP-Online” in its tracks. From legal advocacy in Zimbabwe to digital bystander intervention in Guatemala and media campaigns in Kenya, an array of initiatives led by community and digital activists, law enforcement, state and elected officials and international human rights actors are engaging to end VAWP-Online.</p>	<p>Violence against women in politics is one of the newest forms of human right violation and discrimination against women to be recognized by the United Nations. By sharing the latest research and legal policy responses, this panel responds to the SRVAW’s call to action and will give direction, insight and guidance to international actors seeks to implement the recommendations of A/73/301.</p>	<p>Equal participation is driven by recognizing the current status (disaggregating participation data along intersectional demographic lines) and targeting strategies to open participation up to under-represented groups through outreach, targeted advertising, training and orientation activities and resources. First time participants in the WSIS may find the broad scope of the Forum to be daunting or unapproachable. Providing user-friendly resources and explicitly encouraging the participation for these groups can help overcome these barriers to equal participation.</p>

48	1981	Academia	United States of America	<p>The Future is Now!!: Embracing blockchain technology as a tool to advance SDG implementation today! Using the technology of today to reach our goals of tomorrow. Understanding ways to use blockchain technology to align with SDGs. Blockchain technology is the backbone of what has been called a new type of internet. It allows digital information to be distributed and decentralized so that all people can participate in it. This technology has been used to impact projects all over the world. The panelist have experience using blockchain technology to bring social justice, economic empowerment, environmental responsibility, and responsible consumerism. In this workshop, the panelist will discuss ways to embrace blockchain technology in current projects as well as discuss the infrastructure necessary to make sure that all communities are participants in this new technical era. A discussion on how to use bounties and DAO as a roadmap to SDGs as well as what underlying infrastructure needs to be in place to be active participants in a global blockchain economy.</p>	<p>A discussion on how to use bounties and DAO as a roadmap to SDGs as well as what underlying infrastructure needs to be in place to be active participants in a global blockchain economy.</p>	<p>A partnership with EthGlobal, EthBounties, ETHix, Celo, SeaForm Media, and Women of Color in Blockchain. It would be great to create bounties that align with WSIS initiatives. Also it would be nice to create UN blockchain Fellowships where people can work on a UN initiative for a year in a UN office. Ask Gloria for more information.</p>

68	American Tower Corporation	Private Sector	United Kingdom	<p>A. Topic: Infrastructure 4 Development WSIS Action Lines: C2, C3, C4, C5, C11, and C13 B. Topic: Innovation 4 Digital Literacy WSIS Action Lines: C4, C11, and C12</p>	<p>For all the internet's benefits, its reach in many developing countries remains limited due to cost, scalability, power outages and educational barriers. To help alleviate this problem, at ATC, we are using our communications infrastructure in an innovative way by building Digital Villages near our tower sites to bring broadband connectivity and enhance digital skills of the communities we serve. Digital Villages are computer-equipped centres or kiosks that use the uninterrupted power supply and broadband link from our sites to provide local communities with free education and training in information, communications and technology (ICT) to increase computer literacy and help create digitally empowered societies. This helps promote and advance WSIS Action Lines C2, C3, C4, C6, and C12 as well as SDGs 4, 5, 8, 9, 10 and 17. To date, we have established Digital Villages in India, Nigeria, and Ghana where we partner with local stakeholders to reach at least one family member in each of approximately 8,000 households in the regions where these Digital Village sites are deployed. We believe that the ITU and other international organizations can be a strategic</p>	<p>We believe that the ITU and other international organization be a strategic partner in advancing and proliferating our Digital Villages initiative, which aims to increase digital literacy and reduce the digital divide, as aligned with the objectives of the WSIS process. To that extent, we would be happy to further discuss ways to align synergies between our respective organizations.</p>

Title of Panel: Culture for a Sustainable Digital Environment: How can culture help shape the digital environment and why is it so crucial today, with the advancement of Artificial Intelligence, for ICTs to embrace culture fully? 2. Action Line Action line 8 “Cultural diversity and identity, linguistic diversity and local content”. 3. Summary UNESCO has long advocated and demonstrated that culture, in its diverse manifestations - from tangible and intangible cultural heritage to cultural and creative industries - is a driver and enabler of sustainable development. Today, the advancement of Artificial Intelligence highlights that ICTs are having a direct impact on the way cultural expressions are created, disseminated and accessed, and the way cultural heritage is experienced, safeguarded and shared. Culture in the digital environment is responding to global challenges through the exercise of freedom of expression and the promotion cultural diversity (SDG 4). ICTs are progressively incorporated into the cultural and creative sectors in ways that can yield enhanced, inclusive and equitable development outcomes including creating employment and fostering</p>

128	Aastha Engineering Solution Pvt.Ltd.	Private Sector	Nepal	<p>As my experience of working with rural farmers, In terms of knowledge management and knowledge sharing among the farmers, the use of ICTs is low in most of the developing countries. The present benefit of ICT include speedy transaction of business using mobile phones. The future benefit will emanate from E-commerce or M-Commerce. The future depends on the level of e-readiness of the farmers. That is on the broad level. However based on current infrastructures, WSIS forum 2019 can have a good topics regarding this.</p>	<p>The WSIS forum have to discuss in depth regarding following topics which could contribute great to achieve 2030 goals. WSIS can also implement following activities as the action line. a. Prepare Local Servers to provide agriculture information, Tourism, Health, Small Scale Industries, Education etc. in simple local language. b. Prepare the local network (Intranet) connecting numbers of village in same network and farmers, teachers, health worker, entrepreneur etc. can be trained from a single point. It does not take costly. Locally made intranet link does not need to pay much money for bandwidth. So, it is economic.</p>	<p>WSIS forum need to make a 'country wise representing team including the government officials'. The team will be responsible to implement, monitor and impact analyze of the activities under WSIS forum. The individual team representing each country can discuss and share own experiences and achievement via internet so that they can add quality in their work. Personally, I and my organization is ready to work as the WSIS partner in my own cost for Nepal.</p>

135	SCE Inc. Korea	Private Sector	Korea	<p>I would like to suggest to have an information session on "Accessibility considerations on emerging technologies" (within the "Accessibility Day" workshop planned), and provide some information session on technical and strategic accessibility considerations. What I would like to focus on is the mobile application accessibility. Since the introduction of Apple's iPhone and Google's Android operating systems, mobile phone platform usage has been revolutionized. Electronic commerce, social networks, and information services are now widely available on mobile devices, and these devices are gradually taking over roles once played by laptops and desktop personal computers. This is also related to my activities in the APT (Asia-Pacific Telecommunity)'s ASTAP forum (APT Standardization forum). I and Mr. Daniel (Hark) Sohn are the rapporteurs of conducting a survey related to the mobile accessibility in the Asia-Pacific region. We are working on collecting data from Asia-Pacific countries to analyze status quo of mobile application accessibility through ASTAP Expert Group on Accessibility and Usability. Though the study is still underdevelopment till June 2019, we cannot report the results to the WSIS Forum. However, we would like to present at least some preliminary results as well as a technical tool that is being used in the analysis. The tool is listed on the list of designed to analyze mobile applications automatically to investigate the conformance of accessibility with known standards. In 2016, we ran a similar workshop related to the mobile accessibility and its strategic importance along with introduction of our tools in an</p>	NA	NA

138	Geneva International Model United Nations	Civil Society	Switzerland	<p>Keeping in mind the large range of possibilities and particularities to be discussed under the WSIS Action Lines, shall I suggest one topic per action line: C1. The role of public governance authorities and all stakeholders in the promotion of ICTs for development: Public governance should promote SDGs through ICTs, which may pave the way for development. C2. Information and communication infrastructure: Potential partnerships within different stakeholders will enable better funding for infrastructure. C3. Access to information and knowledge: Develop user-friendly resources so as to make them more accessible for disabled or illiterate people. C4. Capacity building: Capacity building and e-Training among the youth in order to ensure that they will be able to use ICTs efficiently in the future. C5. Building confidence and security in the use of ICTs: The role of intellectual property and competition law within the ICTs. C6. Enabling environment: The need to regulate data protection to ensure the privacy of individuals. C7. ICT applications: benefits in all aspects of life: Empowering and regulation of e-Commerce as a way to facilitate trade between countries. C8. Cultural diversity and identity, linguistic diversity and local content: Special training for language experts in the ICTs to ensure the preservation of multilingualism and multiculturalism. C9. Media: Promotion of the SDGs through the media as a way to reach the general public. C10. Ethical dimensions of the Information Society: Create gender-inclusive policies. "Establishing clear links between trade policy and overarching goals, including gender equality and women's economic empowerment, will further contribute to</p>	<p>We may suggest a possible partnership with GIMUN, which would strengthen the link with the youth. As stated in the WSIS Declaration of Principles "youth should be empowered as learners, developers, contributors, entrepreneurs and decision makers. We must focus especially on young people who have not yet been able to benefit fully from the opportunities provided by ICTs." (para. 11). In accordance to this affirmation, GIMUN would organise every year educational workshops and training on ICTs and on the promotion of the 2030 Agenda for Sustainable Development and the specific WSIS Action Lines. As stated in the Outcome Document of the High-Level meeting of the General Assembly on the overall review of the implementation of the outcomes of the World Summit on the Information Society, "divides are often closely linked to education levels and existing inequalities, and we recognize that further divides can emerge in the future, slowing sustainable development." (para. 21). Therefore, we find of great importance that the youth will have proper education on this specific matter, to ensure that the future leaders, workers, citizens, will contribute to development.</p>

					<p>rights based approach and achieving SDGs. Increasingly, Artificial intelligence as an advanced ICT increasingly continues to impact the practice and protection of journalists, therefore affecting the content produced in journalism and media. Direct impacts of AI on journalism include the material and quality of the material that is disseminated in news and media production, as well as its audience. Consequently, it remains crucial that both the benefits and challenges of AI-enhanced journalism are analysed. Digital techniques such as automated journalism, computational journalism and robotic journalism facilitate the generation of news by algorithm however, these methods of AI pose several limitations. Algorithms threaten media pluralism by means of the micro-targeting of select audiences. This micro-targeting can range from targeted advertisements to politically-motivated objectives. Moreover, the dissemination of fake news leading to misinformation and disinformation remains a concern at large. While AI-based algorithms can filter factual news from fake news, concerns regarding the legitimate “arbiter” of truth are provoked. Finally, as the</p>

					<p>confidentiality of sources are the foundation of integrity of journalists', privacy concerns related to AI and journalistic sources are faced with challenges. In sum, UNESCO stresses the importance of the human rights impacts of AI. Specifically, the effects and tangible future of AI intersectionality with journalism and media development. In order to strengthen journalism and media development in digital age, it is therefore strongly advised that AI and AI-based applications be subject to a set of clear guidelines that are conformant with international human rights standards. Key Questions / Topics for Discussion? - What are the core human rights concerns in relation to AI and AI-based tools in relation to journalism and media dissemination? - What are positive and negative consequences of the usage of AI and AI-based tools in journalism and media dissemination? (Are there any foreseeable legal consequences for journalists themselves?) - What role does the media play in relation to AI intersectionality and journalism?</p>

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

165	International Foundation for Electoral Systems	Academia	United States of America	<p>5) Building confidence and security in the use of ICTs: It is vital to recognize that confidence and security in ICTs has a specific gender dimension and operates along a gendered-divide. Women face different threats and risks than men do when they use ICTs. This should be a topic of discussion in the action lines, especially as it concerns violence against women in politics, because research shows that women in politics are the direct targets of intentional ICT-based attacks. These attacks are especially harmful because they hurt both the individual person as well as silencing her from exercising her civil and political rights and contributing to the broader society.</p>	<p>Baseline data on the prevalence and impact of ICT-based harassment and violence against women should be collected and grassroots response activities that promote awareness and provide direct assistance to victims should be implemented under Action Line 5.</p>	<p>the International Foundation for Electoral Systems (IFES) stands ready to partner with WSIS on the implementation of its goals on democracy, elections and equal political participation as enabled through ICTs, through 2025.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

40	University of Geneva (GTI-Tsinghua Initiative)	Academia	Switzerland	I believe that important themes should more take into account of topics that are sought to be contentious or difficult, but with which there are potentials for technologies to be assistive to solve difficult issues. Examples of issues can be social inclusion projects for (especially unaccompanied) refugee children, assistive technology for people with disabilities and mental health issues, and far-sighted outlook on most recent technologies like 5G, blockchain, and Internet of Things (IoT).	Inviting not only CEOs or high-profile people, but also various expert/occupations to speak at the High-Level Segment, is important since different individuals with various job status can contribute to different issues.
41	University of Geneva (Geneva-Tsinghua Initiative)	Academia	Switzerland	Therefore topics such as e-learning for refugees and displaced communities as well as ICTs for education for people with disabilities could be topics which would benefit from the contribution of the WSIS Forum.	Hackathons, panel discussions, interactive e-learning platforms could be showcased and could be tested by the public, VR games with an SDG education purpose
42	Streamr	Private Sector	Switzerland		15 by 15 talks format. 15min presentation followed by 15 min audience questions.

47	ASDF International	Civil Society	India	Impactful Innovation at Developing Countries in ICT Area	More remote participation and goodies can be presented. Regional Ambassadors can be appointed.

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

48	1981	Academia	United States of America	The main topic that will be discussed is "Blockchain for Global Impact and Sustainable Development". The panelist will be discuss Sustainability and Bounties for the Environment(SDG11, SDG13), Transparently Distributed teams and Women Entrepreneurs(SDG8, SDG9, SDG5) Global Impact and Blockchain Laws(SDG16), Inclusion in Tech & Digital divide(SDG9),(SDG4),(SDG5) and Economic Empowerment(SDG8), (SDG10) via Blockchain	Some of the blockchain concepts are better understood by participation. One of the ways we facilitate that is in blockchain bounties. We would create specific bounties for the WSIS forum that participants can earn actual cryptocurrencies. Our panel is also open to taking questions from both the audience in the room and that audience that is online, via Twitter. We would also have some scheduled tweets to engage both audiences and allow them to continue the discussion post session. Lastly, we would love to help with the hackathon either as judges, mentors, or workshop leaders.
49	YouTube/Google	Private Sector	Switzerland	digital accessibility, internet access, women's empowerment

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

58	Wajenzi	Private Sector	Netherlands	<p>While the diasporas are important actors in economic development, they are still mainly considered shortcuts to leveraging financing – especially remittances – channeling funds for sustained development in Africa – in a sub-optimal manner. This attitude underplays alternative platforms of innovative contributions of the diaspora. A parochial focus of such financial contributions poses risks of failure and ultimately jeopardizes the 2030 Agenda. I propose the setting up of a multilateral diaspora investment platform to create conditions for migrants and diasporas to fully contribute to SDGs in all countries (Article 19 of the Global Compact on Migration). Indeed, the impact of diaspora on the 2030 Agenda should be multidimensional and multifaceted, requiring an in-depth consideration by African governments and other stakeholders in diaspora remittances, trade, and investment. Indeed, while target 1 of the SDG is focused on ending poverty, one of the means to that end is the subject of diaspora remittances as suggested by the indicators proposed for assessing this target.</p>

67	Office of Electronic Communications	Government	Poland	We suggest the topic "Emerging technologies for digital transformation – how to maximize benefits for societies and economies". This will be also the topic of workshop proposed by UKE.	

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

68	American Tower Corporation	Private Sector	United Kingdom	<p>As a firm believer in the impact of increased telecommunications infrastructure deployment on achieving the Sustainable Development Goals, the WSIS Action Lines and the UNGA Overall WSIS review, we recommend the following topics and themes for the High-level segment of the WSIS Forum 2019: I. Infrastructure 4 Development – to discuss the impact of increased infrastructure deployment on achieving the SDGS, WSIS Action Line C2, and implement the recommendations of the UNGA Overall WSIS Review II. Innovation 4 Digital Literacy – to discuss how stakeholders’ innovation can boost digital literacy as aligned with the Connect 2020 Agenda, SDG Goal 4 on Quality Education and WSIS Action Line C4 on Capacity Building</p>	<p>ATC is an avid supporter of the multistakeholder input model, and as such we believe that the High-level segment can be made more dynamic through encouraging contributions from stakeholders in response to the statements delivered by the High-level delegates present. The WSIS Secretary is then encouraged to collate these contributions and amalgamate them into the WSIS Chairperson Report. ATC additionally believes that the High-level Segment discussions should focus on the WSIS participants, through allocating most of the time to questions from the audience. This is proven to stimulate dynamic, interactive discussions in comparison to the statement delivery model. We also believe that the High-level Segment must include more representation from youth groups. Thus, we encourage the WSIS forum to expand its High-level Segment selection to include leading young men and women. Youth group representatives tend to be agile, creative and dynamic – all characteristics, which shall boost interaction, but also contribute to building the capacity of future leaders.</p>
----	----------------------------	----------------	----------------	---	---

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

69	WSIS Coalition	Private Sector	United Kingdom	<p>The WSIS Coalition continues to take an active role in the rapid technological evolution, characterizing the Fourth Industrial Revolution. Accordingly, and as aligned with the WSIS Action Lines and the UNGA Overall WSIS review, we recommend the following topic and theme for the High-level segment of the WSIS Forum: I. Artificial Intelligence 4 Sustainable Development – to discuss the impact of the growing development and application of AI-powered technologies on achieving the Sustainable Development Goals and implementing the WSIS Action Lines. Similarly, noting that 50% of the world’s population remains unconnected, the WSIS Coalition recommends that the high-level segment considers: II. Smart Partnerships for Development – to foster conversation on how to strengthen commitment to bridging the digital divide and proliferate efforts to connect the unconnected.</p>	<p>The WSIS Coalition is an avid supporter of the multistakeholder input model, and as such we believe that the High-level segment can be made more dynamic through encouraging contributions from stakeholders in response to the statements delivered by the High-level delegates present. The WSIS Secretary is then encouraged to collate these contributions and amalgamate them into the WSIS Chairperson Report. The WSIS Coalition additionally believes that the High-level Segment discussions should focus on the WSIS participants, through allocating most of the time to questions from the audience. This is proven to stimulate dynamic, interactive discussions in favour of the WSIS Action Lines and the Sustainable Development Goals.</p>

87	Global Broadband Plan for Refugees	Civil Society	United States of America	In 2016, the UNHCR published a vision statement calling for "all refugees, and the communities that host them, have access to available, affordable and usable mobile and internet connectivity in order to leverage these technologies for protection, communications, education, health, self-reliance, community empowerment, and durable solutions." During the last year, our group put together a detailed plan for how to achieve that vision. A significant part of the plan integrates the refugee agenda with the 2030 SDG agenda. We would propose a session on concrete steps for integrating connecting refugees and their communities with the SDG agenda.

90	UNESCO	International Organisation	France	<p>The High Level Dialogue will provide space for open consultations and encourage discourse on a shift of paradigm on the important role that indigenous languages could play towards sustainable development if ICTs are made accessible, inclusive and affordable for all, including indigenous language users. Indigenous languages are imbued with invaluable potential and universal knowledge that can be unlocked in order to contribute to development and innovation in domains such as education, science and research, culture, policy, industry and environment. In the past, numerous efforts have been devoted to ensuring equal access to information and knowledge using ICTs, establishing resilient infrastructures, facilitating access to education, health care and employment, combating climate change, as well as strengthening the means for global partnerships. Despite progress made, the needs of indigenous language users have not been fully taken into consideration for policy development, product and services delivery, nor were the underlying ethical dimensions acknowledged. The high-level dialogue also aims to raise global attention on the critical risks confronting indigenous languages and their significance for sustainable development, reconciliation, good governance and peacebuilding. Furthermore, the panel will build synergies and contribute to the ongoing discussions across different WSIS Action Lines.</p>	<p>UNESCO, as lead UN agency for the organization of the International Year of Indigenous Languages and as facilitator of several WSIS Action Lines, will bring together high level panelists who are actively engaged in policy-making, international cooperation, civil society and human rights activities, and industrial development with the aim to share their experiences in the area of digital inclusion and contribute to shaping the Action Lines' future.</p>

115	International Federation for Information Processing	International Organisation	A United States of America	Working on disaster information processing, we came to feel that we could consider more economical and strategic aspects of information processing and communication technologies. Economical aspects are not only the issues of financial matters but if we look at people as great resources in a society, we need to look more at education and literacy and share the problems globally. For strategic aspects, you could consider more of the technologies "by design" so that the forum could provide an opportunity for deducing novel needs for the providers of technologies.	You could invite people who work on strategic or economical aspects of information processing, who could make the opportunities more productive. Also you could invite more people from NPOs, so that they could provide real issues from their experiences.
116	Iran University of Science and Technology	Academia	Iran	- How science and innovation policies foster the implementation of the Information and Knowledge Societies. - Finding and defining clear mechanisms for international public policy issues for implementing the Information and Knowledge Societies. ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

128	Aastha Engineering Solution Pvt.Ltd.	Private Sector	Nepal	<p>I would like to emphasis again the slogan that I already suggested, "ICT in grassroots: Entertain tool to Entrepreneur tool" here. Now days, mobile companies are selling internet service more. I found that, villagers are using it for social media conversation, you tube etc. The WSIS forum need to purpose a effective policies and methodologies on how this can be used to uplift their social role and status. If they can be engaged in Internet to learn and search for better agriculture practices, health and sanitation, education, women empowerment etc, than knowledge can transfer in easy way.</p>	<p>1. We can collect some successes stories on 'Impact of ICT to achieve SCG Goals' from all over the world and can present in WSIS forum. They should be uploaded in YouTube type internet forum so the information can flow easily to the world. Mobile devices and Internet access will allow rural women and local entrepreneur to catch up with the current rapid advancement of technology and growth of information and will greatly improve their digital literacy. Access to mobile-based agricultural information services that provide them with agricultural production tips and best practices, weather forecasting, and other helpful information, such as how to deal with pests, ICTs carry the potential to increase the financial capability and literacy of rural women and local entrepreneur by giving them access to mobile-based banking, extension and financial services with market information. Market information services allow them to access the market digitally as well as learn how to navigate the market in order to get the most in return for their products.</p>
-----	--------------------------------------	----------------	-------	--	---

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

129	EC MEDICI Framework	Civil Society	Italy	<p>WE SUGGEST to open a critical discussion about the impact of ICTs on society, this extending the view beyond the abuse and misuse of cyber technologies. As an extreme consequence of abuse and misuse we find an additional relevant topic to discuss it can be entitled “XXI Century cyber warfare”, fake news, hackers, and more completely reshaped the concept of “war”. The increasing role of cyber technology in our everyday life and key services increases at the same time and even more the risk of cyber-attacks. We already faced a number of relevant attacks due to hackers, some targeting Governmental or Law Enforcement agencies and Institutions, some targeting critical infrastructure, some targeting big companies. Financial markets may be influenced or tilted by cyber-attacks. Smart cities and grid models must carefully consider cyber security issues; we don’t appreciate the “rebellion” of elevators or the unwanted locking of all the entrance doors of our company headquarters. What about industrial machinery today fully computerised, or critical infrastructure management; in a cyber warfare scenario it might be enough to dispatch on the network a code name like “1024 millibar” to collapse the whole target infrastructure. Today even cars may be subject to cyber-attacks, this to do not mention aircrafts, ships, trains, metro and any other transportation means, PLC and more in general software programs are easily hacked. We are surrounded by “critical infrastructures” that may create mayor or minor impact on our daily life. We don’t mean only typical critical infrastructures like communication, energy, water, health, transportation, and last but not less important nowadays financial services; we consider information services, social media, geo-positioning, home automation, smart cities, safety and security, etc. In addition WE SUGGEST including among the themes of High Level Segment the call for the cooperation and knowledge/best practice sharing in the use of ICTs in the field of Safety, Security and Disaster Recovery. ICTs may offer a relevant contribution to these sectors; we all consider cyber-security as one of the pillars of the knowledge society enabling eGov, eBiz, eHealth and more but in addition ICTs may provide key contribution in human, border, counter terrorism, food, etc. security. The</p>	<p>The format of the last editions is “mono-directional” a minimum level of interaction with audience must be activated to enjoy a more dynamic and interactive High-Level Segment. A longer Q+A session must follow each session. WE SUGGEST to publish, before the event, a short abstract of each High-Level Segment contribution in order to let the audience better interact on the occasion of the event. This may even enable the creation of clusters of participants interested in debating on the specific topic after each set of High-level Segment short presentations.</p>
-----	---------------------	---------------	-------	--	--

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

				<p>same applies to safety with extension to health aspects and of course technologies play a key role in case of human or natural disasters as already stated on the occasion of previous Forums by distinguished speakers (e.g. H.E. Mr Yasuo Sakamoto, Vice-Minister for Policy Coordination, Ministry of Internal Affairs and Communications (Japan), Mr. Sunil Bahadur Malla, Secretary, Ministry of Information and Communications in Nepal). There is a need to share knowledge and best practice among countries creating a reference point for this community. Nowadays it is evident that the demand for "safety & security" in all its forms has increased, especially quantitatively and qualitatively, making clear the need for new approaches to enable the entire sector to ensure better results. WSIS may play a key role in this sector becoming the reference point for this community. It is time to extend the scope of C5 from "confidence and security" to a much more general scenario including not only security in a broader sense but even safety, natural and human disasters recovery and management, and more.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

138	Geneva International Model United Nations	Civil Society	Switzerland	<p>Taking into account that the 2030 Agenda for Sustainable Development is very broad, that all the SDGs require to be discussed and implemented and that they are interlinked to the extent that development cannot be achieved without horizontal action in every SDG, I may suggest a few topics of discussion according to the challenges underlined in the UNGA Overall WSIS Review). Firstly, as mentioned above in the form, there are several digital divides between developed and developing countries and between men and women. Also, “particular attention should... be paid to address the specific ICT challenges facing children, youth, persons with disabilities, older persons, indigenous peoples, refugees and internally displaced people, migrants and remote and rural communities.” (A/70/L.33, art. 7). However, these guidelines seem to be very broad and they should be narrowed so that specific actions could be taken to assist the very specific needs of every specific group. Secondly, it is worth mentioning the protection of human rights on ICTs: “the same rights that people have offline must also be protected online.” (A/70/L.33, art. 9). With regard to the ICTs, there might be human rights violations in different aspects: On one side, with the development of Big Data, privacy and data protection are endangered, which may go against article 12 of the Universal Declaration for Human Rights. (See also A/C.3/71/L.39/Rev.1, on the Right to Privacy in the Digital Age). On the other side, freedom of expression should be respected in accordance with the provisions of article 19 of the Universal Declaration for Human Rights and the SDG target 16.10 (“Ensure public access to information and protect fundamental freedoms, in accordance with national legislation and international agreements”), for which States should take measures to protect journalists and ensure freedom of expression and assembly. Thirdly, economic growth, sustainable development and equitable future require women’s empowerment. Gender mainstreaming should be promoted in every layer and area. During a seminar on “Leveraging SDG 16 to improve implementation of SDG 5” it was discussed that gender mainstreaming would be complicated and long to achieve since the society has a large and deep-rooted patriarchal</p>	<p>There may be different methods to make the High-Level Segment more interactive: 1. Think Break – Ask a rhetorical question, and then allow participants to think about the problem before you go on to explain. This technique encourages participants to take part in the problem-solving process. 2. Storytelling – The speaker illustrates a concept, idea, or principle with a real-life application, model, or case study, in order to catch the attention of the participants from the beginning, or even create some empathy towards the issue. 3. Make It Personal – Design the speech to address the real lives of the individuals. “In today’s fast-changing world, helping leaders and companies evolve and grow through human-centered design.” (Ideo Magazine to the question: “What makes organisations more creatively competitive?) 4. Leave enough time for Q&A in order to let participants interact with the speakers or raise new meaningful points. 5. Good visual support is a good way to keep the attention of the receptors. Also, short videos and images may help to reach the public.</p>

				<p>tradition. Nevertheless, if we consider the recent and rapid development of ICTs and the information societies, it would be reasonable to think that digitalisation could be a good way of empowering women (SDG 5 and SDG and SDG 10). Nonetheless, “whether digitalisation will close or widen gender gaps in the labour market will, to a large extent, depend on policy. Governments, therefore, have a crucial role to play.” (POLICY BRIEF ON THE FUTURE OF WORK - Going Digital: The Future of Work for Women, page 1). Fourthly, “efficient public resource allocation to ICT deployment and development, recognizing the need for ICT budgeting across all sectors, especially education. “A/70/L.33, art. 36) should be discussed.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

166	International Foundation for Electoral Systems	Academia	United States of America	<p>Online violence against women in politics silences women's voices and prevents them from exercising their civic and political rights, posing a serious challenge to the realization of SDG 5. Digital technologies are weaponized to attack women who break social norms and enter the political space as candidates, activists, journalists and other roles. In response, innovative global responses are emerging to fight back and stop "VAWP-Online" in its tracks. From legal advocacy in Zimbabwe to digital bystander intervention in Guatemala and media campaigns in Kenya, an array of initiatives led by community and digital activists, law enforcement, state and elected officials and international human rights actors are engaging to end VAWP-Online.</p>	<p>The intensity of online violence against women and the exceptional innovation and activism of those who combat it can be illustrated through real-life examples, testimonies and images. In particular, we propose to engage participants in the High-level segment and other attendees to rise to the challenge of standing up against online harassment of women by personally joining a global community of digital activists that respond and intervene to stop this violence in real time. This method is proven to work and is accessible for anyone with a cell phone, from Heads of State to rural students.</p>

WSIS Forum 2019: Open Consultation Process

ANNEX: Submissions received pertaining to the themes and structure of the WSIS Forum 2019

ANNEX 4: Submissions received during the first and second physical meetings of the 2019 open consultation process

WSIS Forum 2019: First Physical Meeting of the Open Consultation Process

WSIS Forum 2019: Second Physical Meeting of the Open Consultation Process

Stakeholder Type	Country	Organization	Input
<i>International Organization</i>	<i>Switzerland</i>	<i>UNCTAD</i>	<ul style="list-style-type: none"> Invited everyone to contribute to propose ideas and activities for the WSIS Forum 2019, as well as to be a partner Encouraged the use of more languages at the WSIS Forum. Informed that UNCTAD will hold e-commerce week on 1-5 April 2019, before the WSIS Forum 2019 to discuss the development opportunities and challenges associated with the evolving digital economy. UNCTAD will bring the highlights of the event and its participants to the WSIS Forum 2019. Mentioned that UNCTAD will organise a session that focused on improving the availability of ICT statistics for measuring.
<i>Private Sector</i>	<i>Switzerland</i>	<i>Techlabs</i>	<ul style="list-style-type: none"> Informed that Techlabs is planning to organise a session involving students, to showcase a 3D printing with a social purpose. The aim is to recognise that ICTs can be used in many ways to improve the creativity, problem solving skills, and create projects to develop the SDGs. Techlabs will provide a training session to young students to create a 3D printed prosthetic hand. Using this 3D printing, the students can learn how to create the hand and help other kids who don't have access to technology.
<i>Technical Community</i>	<i>Switzerland</i>	<i>ICANN</i>	<ul style="list-style-type: none"> Expressed its appreciation of the WSIS Forum that has been always providing excellent dialogue among the different type of stakeholders and governments.
