ITU-T

ITU-T D-SERIES RECOMMENDATIONS  
**TARIFF AND ACCOUNTING PRINCIPLES AND INTERNATIONAL TELECOMMUNICATION/ICT  
ECONOMIC AND POLICY ISSUES**

TERMS AND DEFINITIONS	D.0
GENERAL TARIFF PRINCIPLES	
Private leased telecommunication facilities	D.1–D.9
Tariff principles applying to data communication services over dedicated public data networks	D.10–D.39
Charging and accounting in the international public telegram service	D.40–D.44
Charging and accounting in the international telex message service	D.45–D.49
Principles applicable to GII-Internet	D.50–D.59
Charging and accounting in the international telex service	D.60–D.69
Charging and accounting in the international facsimile service	D.70–D.75
Charging and accounting in the international videotex service	D.76–D.79
Charging and accounting in the international phototelegraph service	D.80–D.89
Charging and accounting in the mobile services	D.90–D.99
Charging and accounting in the international telephone service	D.100–D.159
Drawing up and exchange of international telephone and telex accounts	D.160–D.179
International sound- and television-programme transmissions	D.180–D.184
Charging and accounting for international satellite services	D.185–D.189
Transmission of monthly international accounting information	D.190–D.191
Service and privilege telecommunications	D.192–D.195
Settlement of international telecommunication balances of accounts	D.196–D.209
Charging and accounting principles for international telecommunication services provided over the ISDN	D.210–D.260
Economic and policy factors relevant to the efficient provision of international telecommunication services	D.261–D.269
Charging and accounting principles for next generation networks (NGN)	D.270–D.279
Charging and accounting principles for universal personal telecommunication	D.280–D.284
Charging and accounting principles for intelligent network supported services	D.285–D.299
RECOMMENDATIONS FOR REGIONAL APPLICATION	
Recommendations applicable in Europe and the Mediterranean Basin	D.300–D.399
Recommendations applicable in Latin America	D.400–D.499
Recommendations applicable in Asia and Oceania	D.500–D.599
Recommendations applicable to the African Region	D.600–D.699
Recommendations applicable to the Arab Region	D.700–D.799
Recommendations applicable to the Eastern Europe, Central Asia and Transcaucasia Region	D.800–D.899
RECOMMENDATIONS FOR INTERNATIONAL TELECOMMUNICATION/ICT ECONOMIC AND POLICY ISSUES	
Charging and accounting/settlement mechanisms for international telecommunications services	D.1000–D.1019
Economic and policy factors relevant to the efficient provision of international telecommunication services	D.1020–D.1039
International Internet connectivity; and Tariff, Charging Issues of Settlements Agreement of Trans-multi-country Terrestrial Telecommunication	D.1040–D.1059
International mobile roaming issues	D.1060–D.1079
Alternative calling procedures and misappropriation and misuse of facilities and services	D.1080–D.1099
Economic and regulatory impact of the Internet, convergence (services or infrastructure) and new services	D.1100–D.1119
Definition of relevant markets, competition policy and identification of operators with significant market power (SMP)	D.1120–D.1139
Economic and policy aspects of big data and digital identity in international telecommunications services and networks	D.1140–D.1159
Economic and policy issues pertaining to Mobile Financial Services (MFS)	D.1160–D.1179

*For further details, please refer to the list of ITU-T Recommendations.*

## Supplement 5 to ITU-T D-series Recommendations

### ITU-T D.52 – Implementation guidelines for Recommendation ITU-T D.52 focusing on operationalization of regional Internet exchange points

#### Summary

Supplement 5 to ITU-T D-series Recommendations is focused on addressing the challenges related to the operationalization of regional Internet exchange points and identifying the most cost-effective mechanisms for interconnecting regional Internet exchange points.

#### History

Edition	Recommendation	Approval	Study Group	Unique ID*
1.0	ITU-T D Suppl. 5	2021-12-17	3	<a href="http://handle.itu.int/11.1002/1000/14879">11.1002/1000/14879</a>

#### Keywords

Guidelines, ITU-T D.52, regional Internet exchange points.

## FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

## NOTE

This is an informative ITU-T publication. Mandatory provisions, such as those found in ITU-T Recommendations, are outside the scope of this publication. This publication should only be referenced bibliographically in ITU-T Recommendations.

## INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this publication may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the publication development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents/software copyrights, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the appropriate ITU-T databases available via the ITU-T website at <http://www.itu.int/ITU-T/ipr/>.

## **Introduction**

With the increased use of the Internet as a primary means of communication, affordability of Internet services has become a key policy priority for the International Telecommunication Union (ITU) Member States and Sector Members, particularly developing countries. Recommendation ITU-T D.52 encourages regional collaboration to establish central hubs or Internet exchange points (IXPs) that enable local Internet traffic to be routed locally, saving international bandwidth and reducing the costs of international Internet connectivity. More details are required in the form of guidelines on the regional interconnection of IXPs, particularly, operationalization of regional Internet exchange points and identifying the most cost-effective mechanisms for interconnecting regional Internet exchange points.

## Supplement 5 to ITU-T D-series Recommendations

### ITU-T D.52 – Implementation guidelines for Recommendation ITU-T D.52 focusing on operationalization of regional Internet exchange points

#### 1 Scope

This Supplement proposes guidelines for the implementation of [ITU-T D.52] with a focus on operationalization of regional Internet exchange points (RIXPs).

#### 2 References

[ITU-T D.52] Recommendation ITU-T D.52 (2016), *Establishing and connecting regional Internet exchange points to reduce costs of international Internet connectivity*.

#### 3 Definitions

##### 3.1 Terms defined elsewhere

This Supplement uses the following term defined elsewhere:

**3.1.1 Internet exchange point (IXP)** [ITU-T D.52]: A single physical network infrastructure operated by a single entity with the purpose to facilitate the exchange of Internet traffic. It acts as a centralized hub enabling local traffic to be routed locally and save international bandwidth which has the effect to reduce the overall costs of international Internet connectivity.

##### 3.2 Terms defined in this Supplement

None.

#### 4 Abbreviations and acronyms

This Supplement uses the following abbreviations and acronyms:

ISP	Internet Service Provider
IXP	Internet Exchange Point
NRA	National Regulatory Authority
RIXP	Regional Internet Exchange Point

#### 5 Conventions

None.

#### 6 Overview of regional Internet exchange points

A regional Internet exchange point (RIXP) is a physical network infrastructure that facilitates the exchange of Internet traffic in different countries. The primary role is to keep regional traffic regional and save international bandwidth, which reduces the costs of exchange traffic between local Internet service providers (ISPs). By locating internal traffic and avoiding international links, regional operators and consumers can realize significant savings, provide substantial local bandwidth and significantly increase the local performance of the Internet. Local links are often faster, because of the reduced waiting time for traffic.

## **7 Approaches to establishing regional Internet exchange points**

There are three (3) main approaches to establishing RIXPs:

### **i) Interconnecting existing IXPs to create an RIXP**

This model assumes that at least some or all countries in the region have an operational IXP and that there is cross-border terrestrial infrastructure in place. Interconnection of existing IXPs have high recurrent costs implications. Successful interconnection would require increased commitments from the existing IXPs. Where interconnection has been successful, the IXPs had already been well established. Interconnection is largely dependent on having an enabling policy and a regulatory environment for competition on cross-border interconnection.

### **ii) Building a regional IXP**

To build an RIXP several considerations such as location viability, infrastructure investment requirements, policy and regulatory frameworks, ownership and cost apportionment, amongst other issues, should be considered. Policy and regulatory issues include the licence requirements to set up an IXP, cross-border interconnection policy, peering requirements, transit requirements, critical infrastructure protection and taxation amongst other issues.

### **iii) Evolving national/local IXPs into regional IXPs.**

The evolution of a national IXP requires an enabling environment to support its growth. The IXPs compete to attract membership from within and beyond their geographical location. An ISP is capable of peering in more than one IXP in different cities or countries in the region based on the value derived from each IXP. There can also be more than one regional IXP in the region.

## **8 Institutional and operational models**

The three common organizational models for operating regional IXPs are 'not-for-profit', 'for profit' and 'government subsidized'. The 'not-for-profit model' is usually based on cost recovery i.e., one-off joining fees and operation fees based on port speed or traffic volume. The 'for profit' model normally involves a commercial neutral operator. An RIXP can also be established and financed from subsidies and grants.

## **9 Implementation and management of RIXPs**

Implementation considerations include location, licences and permissions, budget, deployment model, amount of traffic and number of peering operators, amongst other issues. There is no one right fit-for-all management model for RIXPs, but the structure should assist the RIXP to be self-determining, remain within legal and regulatory constraints, maintain neutrality and establish financial sustainability. Whether commercial or not it is recommended that ownership and management of the IXP should always remain neutral and uncompromised. Capacity building for the RIXP membership is encouraged for the successful operationalization of the RIXP.

## **10 Policy and governance framework**

Governing policies should be consensually developed by members of the RIXP; these include operational, technical and RIXP membership policies amongst others. It is also recommended that regulators reduce regulatory constraints and create an enabling environment for the IXPs. The existing regulatory regime and its policies may hinder the growth of the IXP. For instance, policies that inhibit competition on broadband terrestrial infrastructure may limit the options available for local interconnection. Content regulation constraints should also be addressed and the promotion of local content policy is encouraged to boost local traffic for the RIXP.

## **11 Regional peering, interconnection and settlement policy considerations**

It is encouraged that an open peering policy is to be developed and implemented in order to encourage non-traditional members such as the academia and banks for peering. A regional interconnection policy is also recommended to foster harmonization and encourage members to exploit cross-border interconnection opportunities by negotiating fair contracts with infrastructure operators and international bandwidth providers.

The ability to attract carriers and transit providers at an IXP is important to grow the value and traffic at an IXP, hence a transit policy should be in place. This policy would be subject to national regulations on Internet transit. Policy and regulatory transparency are pertinent for encouraging regional and international entities to participate in the local interconnection and peering environment. National regulatory authorities (NRAs) are encouraged to foster competitive access to wired and wireless connections, which will help lower the costs associated with connecting to an IXP.

## SERIES OF ITU-T RECOMMENDATIONS

Series A	Organization of the work of ITU-T
<b>Series D</b>	<b>Tariff and accounting principles and international telecommunication/ICT economic and policy issues</b>
Series E	Overall network operation, telephone service, service operation and human factors
Series F	Non-telephone telecommunication services
Series G	Transmission systems and media, digital systems and networks
Series H	Audiovisual and multimedia systems
Series I	Integrated services digital network
Series J	Cable networks and transmission of television, sound programme and other multimedia signals
Series K	Protection against interference
Series L	Environment and ICTs, climate change, e-waste, energy efficiency; construction, installation and protection of cables and other elements of outside plant
Series M	Telecommunication management, including TMN and network maintenance
Series N	Maintenance: international sound programme and television transmission circuits
Series O	Specifications of measuring equipment
Series P	Telephone transmission quality, telephone installations, local line networks
Series Q	Switching and signalling, and associated measurements and tests
Series R	Telegraph transmission
Series S	Telegraph services terminal equipment
Series T	Terminals for telematic services
Series U	Telegraph switching
Series V	Data communication over the telephone network
Series X	Data networks, open system communications and security
Series Y	Global information infrastructure, Internet protocol aspects, next-generation networks, Internet of Things and smart cities
Series Z	Languages and general software aspects for telecommunication systems
