## Recomendación UIT-T G.774.8

### Jerarquía digital síncrona – Gestión de sistemas de relevadores radioeléctricos desde el punto de vista de los elementos de red

#### Resumen

La presente Recomendación proporciona un modelo de información para los elementos de red de relevadores radioeléctricos de la jerarquía digital síncrona (SDH). Este modelo describe las clases de objetos gestionados y sus propiedades para la interfaz física síncrona radioeléctrica y la función de protección de las secciones que tienen esta interfaz física. Estos objetos son útiles para describir la información intercambiada a través de las interfaces definidas en UIT-T M.3010 sobre la arquitectura de la red de gestión de las telecomunicaciones (RGT) para la gestión de los elementos de red de relevadores radioeléctricos.

Historia del documento	
Versión	Notas
2001	La primera revisión incorpora las modificaciones documentadas en la Guía del Realizador.
4/1997	Versión inicial de la Recomendación.

#### Orígenes

La Recomendación UIT-T G.774.8, revisada por la Comisión de Estudio 15 (2001-2004) del UIT-T, fue aprobada por el procedimiento de la Resolución 1 de la AMNT el 9 de febrero de 2001.

## PREFACIO

La UIT (Unión Internacional de Telecomunicaciones) es el organismo especializado de las Naciones Unidas en el campo de las telecomunicaciones. El UIT-T (Sector de Normalización de las Telecomunicaciones de la UIT) es un órgano permanente de la UIT. Este órgano estudia los aspectos técnicos, de explotación y tarifarios y publica Recomendaciones sobre los mismos, con miras a la normalización de las telecomunicaciones en el plano mundial.

La Asamblea Mundial de Normalización de las Telecomunicaciones (AMNT), que se celebra cada cuatro años, establece los temas que han de estudiar las Comisiones de Estudio del UIT-T, que a su vez producen Recomendaciones sobre dichos temas.

La aprobación de Recomendaciones por los Miembros del UIT-T es el objeto del procedimiento establecido en la Resolución 1 de la AMNT.

En ciertos sectores de la tecnología de la información que corresponden a la esfera de competencia del UIT-T, se preparan las normas necesarias en colaboración con la ISO y la CEI.

## NOTA

En esta Recomendación, la expresión "Administración" se utiliza para designar, en forma abreviada, tanto una administración de telecomunicaciones como una empresa de explotación reconocida de telecomunicaciones.

## PROPIEDAD INTELECTUAL

La UIT señala a la atención la posibilidad de que la utilización o aplicación de la presente Recomendación suponga el empleo de un derecho de propiedad intelectual reivindicado. La UIT no adopta ninguna posición en cuanto a la demostración, validez o aplicabilidad de los derechos de propiedad intelectual reivindicados, ya sea por los miembros de la UIT o por terceros ajenos al proceso de elaboración de Recomendaciones.

En la fecha de aprobación de la presente Recomendación, la UIT no ha recibido notificación de propiedad intelectual, protegida por patente, que puede ser necesaria para aplicar esta Recomendación. Sin embargo, debe señalarse a los usuarios que puede que esta información no se encuentre totalmente actualizada al respecto, por lo que se les insta encarecidamente a consultar la base de datos sobre patentes de la TSB.

## Recomendación UIT-T G.774.8

### Jerarquía digital síncrona – Gestión de sistemas de relevadores radioeléctricos desde el punto de vista de los elementos de red

#### 1 Alcance

La presente Recomendación proporciona un modelo de información para que se utilice en la interfaz entre elementos de red y sistemas de gestión, para la gestión de equipos de relevadores radioeléctricos que usen la jerarquía digital síncrona (SDH, *synchronous digital hierarchy*). Identifica las clases de objeto de la red de gestión de las telecomunicaciones (RGT) necesarias para la gestión de elementos de red de relevadores radioeléctricos de la jerarquía digital síncrona. Estos objetos son pertinentes para el intercambio de información entre interfaces normalizadas definidas en UIT-T M.3010 sobre arquitectura de la red de gestión de las telecomunicaciones

#### Estructura de esta Recomendación

Las cláusulas 5 y 6 describen el modelo de información utilizando los mecanismos de notación definidos en UIT-T X.722: Directrices para la definición de objetos gestionados. Las cláusulas 5.6 y 6.7 contienen las definiciones sintácticas de la información transportada en el protocolo, escritas en la notación de sintaxis abstracta uno (ASN.1), definida en UIT-T X.680-X.683. La denominación y la herencia se muestran en forma de diagramas en el apéndice I informativo.

#### 2 Referencias

Las siguientes Recomendaciones del UIT-T y otras referencias contienen disposiciones que, mediante su referencia en este texto, constituyen disposiciones de la presente Recomendación. Al efectuar esta publicación, estaban en vigor las ediciones indicadas. Todas las Recomendaciones y otras referencias son objeto de revisiones por lo que se preconiza que los usuarios de esta Recomendación investiguen la posibilidad de aplicar las ediciones más recientes de las Recomendaciones y otras referencias citadas a continuación. Se publica periódicamente una lista de las Recomendaciones UIT-T actualmente vigentes.

### 3 Términos y definiciones

En la presente Recomendación se utilizan los términos y definiciones especificados en UIT-T G.774, UIT-T G.784 y UIT-T M.3100.

### 4 Abreviaturas

En esta Recomendación se utilizan las siguientes siglas.

AIS	Señal de indicación de alarma ( <i>alarm indication signal</i> )
AP	Punto de acceso ( <i>access point</i> )
CMIP	Protocolo común de información de gestión ( <i>common management information protocol</i> )
CMIS	Servicio común de información de gestión ( <i>common management information service</i> )
CP	Punto de conexión ( <i>connection point</i> )
CTP	Punto de terminación de conexión ( <i>connection termination point</i> )
DRR	Relevador radioeléctrico digital ( <i>digital radio-relay</i> )
GTP	Punto de terminación de grupo ( <i>group termination point</i> )
HPA	Adaptación de trayecto de orden superior ( <i>higher order path adaptation</i> )
IA	Adaptador indirecto ( <i>indirect adapter</i> )
IOS	Sección entre oficinas ( <i>intra-office section</i> )
ISO	Organización Internacional de Normalización ( <i>International Organization for Standardization</i> )
LOF	Pérdida de alineación de tramas ( <i>loss of frame</i> )
LPA	Adaptación de trayecto de orden inferior ( <i>lower order path adaptation</i> )
NE	Elemento de red ( <i>network element</i> )
OS	Sistema de operaciones ( <i>operations system</i> )
OSI	Interconexión de sistemas abiertos ( <i>open systems interconnection</i> )
PDH	Jerarquía digital plesiócrona ( <i>plesiochronous digital hierarchy</i> )
Pkg	Lote ( <i>package</i> )
RF	Frecuencia radioeléctrica ( <i>radio frequency</i> )
RGT	Red de gestión de las telecomunicaciones
RPS	Conmutación de protección radioeléctrica ( <i>radio protection switching</i> )
RRR	Regenerador de relevador radioeléctrico ( <i>radio-relay regenerator</i> )
RRT	Terminal de relevador radioeléctrico ( <i>radio-relay terminal</i> )
RS	Sección de regeneración ( <i>regenerator section</i> )
RSPI	Interfaz física síncrona radioeléctrica ( <i>radio synchronous physical interface</i> )
SDH	Jerarquía digital síncrona ( <i>synchronous digital hierarchy</i> )
Snk	Sumidero ( <i>sink</i> )
Src	Fuente ( <i>source</i> )
STM-N	Módulo de transporte síncrono N ( <i>synchronous transport module N</i> )

When an alarm is pending on an instance, its operationalState is disabled."

### sdhRadioProtectionGroupBeh BEHAVIOUR DEFINED AS

"This object class is used to model all radio protection schemes envisaged for the Radio Protection Switch function. This object class is the focal point for management operations and notifications related to management of the protection system.

The **protectionMismatchStatus** indicates a mismatch between the provisioned **protectionGroupType** of this **protectionGroup** and the provisioned **protectionGroupType** of the far-end. It also indicates mismatch of uni-directional versus bi-directional switch provisioning between the two protection groups.

Actual signal flow across any specific transport entity is reflected by the connectivity pointers of the TPs involved in the protection scheme represented by an instance of this class.

For instances of this managed object class the REPLACE operation on the attributes **revertive**, **waitToRestoreTime** and **protectionGroupType** is not mandatorily required.

When the **exerciseOnOffPkg** package is present, it is possible to start and to stop the exercise procedure on the RPS acting on the **exerciseOn** boolean attribute. When the **exerciseOn** attribute is TRUE, possible malfunctioning of the exercise procedure shall be signalled setting the 'degraded' component in the **availabilityStatus** attribute.

If the **attributeValueChangeNotification** package is present, then changes to the **exerciseOn** and **radioHoldOffTime** (if they are present) shall cause an **attributeValueChange** notification to be emitted.

The **protectionUnit** sub-field of the **protectionSwitchReportingInfo** has no meaning in **protectionSwitchReporting** notification emitted by instances of this managed object class. The conditions for emitting the **protectionSwitchReporting** notifications are specified in the behaviour of the **radioProtectionStatusParameter** parameter.";

### **invokeRadioExerciseBeh BEHAVIOUR**

#### **DEFINED AS**

"The **invokeRadioExercise** action can be used to request a protection exercise routine to be performed on one or more **protectionUnit** instances contained in the **protectionGroup** object.

The action argument contains indications of the protected and protecting **protectionUnits** to which the request applies.

If a protecting **protectionUnit** is identified in the **protectedUnit** field or if a protected **protectionUnit** is identified in the **protectingUnit** field, the action fails.

The **protectionEntity** field may be absent, indicating that the request applies to all contained **protectionUnits**.

A single exercise consists in initiating a switching process without actually switching and, therefore, involves one protected and one protecting **protectionUnit**.

For an exercised protected **protectionUnit**, the exercise result contains the list of each protecting **protectionUnit** to which the switching process has been applied together with the respective obtained result.

For an exercised protecting **protectionUnit**, the exercise result contains the list of each protected **protectionUnit** to which the switching process has been applied together with the respective obtained result.

While an exercise is in progress the value of the **radioProtectionStatus** attribute for both the involved protected and protecting units shall indicate No Request, on the contrary the exercise result will indicate a denied value.";

## 6.5 Definiciones de parámetros

### 6.5.1 Parámetro de estado de protección radioeléctrica

```
radioProtectionStatusParameter PARAMETER
CONTEXT EVENT-INFO;
WITH SYNTAX SDHRadioProtASN1.RadioProtectionStatusParameter;
BEHAVIOUR radioProtectionStatusParameterBeh;
REGISTERED AS {g774-8Parameter 1 } ;
```

```
radioProtectionStatusParameterBeh BEHAVIOUR
DEFINED AS
```

"This parameter is included in the additional info parameters of the protection switching reporting notification.

The **protectionSwitchReporting** notification is emitted from the **sdhRadioProtectionGroup** object only in the following cases:

- a) when a failed protection switch request (an automatic request that cannot be satisfied) occurs and the severity of the alarm causing the request is **highBER** or **signalFail**.
- b) as a consequence of invoked or released switch requests sent by operator commands and successfully accepted.
- c) when a hardware forcing is performed or released locally on the NE.
- d) when a previously invoked manual switch is released by an automatic switch request.";

## 6.6 Definiciones de vinculaciones de nombres

### 6.6.1 augSink

```
augSink-msTcTTPSink NAME BINDING
SUBORDINATE OBJECT CLASS "Recommendation G.774":augSink AND SUBCLASSES;
NAMED BY
SUPERIOR OBJECT CLASS msTcTTPSink AND SUBCLASSES;
WITH ATTRIBUTE "Recommendation G.774":augId ;
BEHAVIOUR augSink-msTcTTPSinkBeh;
REGISTERED AS {g774-8NameBinding 5 } ;
```

### **augSink-msTcTTPSinkBeh BEHAVIOUR**

#### **DEFINED AS**

"The subordinate managed objects are instantiated when the radio protection switching function is present.";

### **6.6.2 augSource**

#### **augSource-msTcTTPSource NAME BINDING**

**SUBORDINATE OBJECT CLASS "Recommendation G.774":augSource AND SUBCLASSES;**

**NAMED BY**

**SUPERIOR OBJECT CLASS msTcTTPSource AND SUBCLASSES;**

**WITH ATTRIBUTE "Recommendation G.774": augId ;**

**BEHAVIOUR augSource-msTcTTPSourceBeh;**

**REGISTERED AS {g774-8NameBinding 6 } ;**

#### **augSource-msTcTTPSourceBeh BEHAVIOUR**

##### **DEFINED AS**

"The subordinate managed objects are instantiated when the radio protection switching function is present.";

### **6.6.3 msTcCTPSink**

#### **msTcCTPSink-rsTTPSink NAME BINDING**

**SUBORDINATE OBJECT CLASS msTcCTPSink AND SUBCLASSES;**

**NAMED BY SUPERIOR OBJECT CLASS "Recommendation G.774":rsTTPSink AND SUBCLASSES;**

**WITH ATTRIBUTE "Recommendation G.774": msCTPId ;**

**BEHAVIOUR msTcCTPSink-rsTTPSinkBeh;**

**REGISTERED AS {g774-8NameBinding 7 } ;**

#### **msTcCTPSink-rsTTPSinkBeh BEHAVIOUR**

##### **DEFINED AS**

"The subordinate managed objects are instantiated when the radio protection switching function is present. Instances of this object may also be instantiated when other types of tandem connection protections in multiplex section layer are present.";

### **6.6.4 msTcCTP Source**

#### **msTcCTPSource-rsTTPSource NAME BINDING**

**SUBORDINATE OBJECT CLASS msTcCTPSource AND SUBCLASSES;**

**NAMED BY SUPERIOR OBJECT CLASS "Recommendation G.774": rsTTPSource AND SUBCLASSES;**

**WITH ATTRIBUTE "Recommendation G.774": msCTPId ;**

**BEHAVIOUR msTcCTPSource-rsTTPSourceBeh;**

**REGISTERED AS {g774-8NameBinding 8 } ;**

#### **msTcCTPSource-rsTTPSourceBeh BEHAVIOUR**

##### **DEFINED AS**

"The subordinate managed objects are instantiated when the radio protection switching function is present. Instances of this object may also be instantiated when other types of tandem connection protections in multiplex section layer are present.";

### **6.6.5 msTcTTP Sink**

#### **msTcTTPSink-sdhNE NAME BINDING**

**SUBORDINATE OBJECT CLASS msTcTTPSink AND SUBCLASSES;**

**NAMED BY SUPERIOR OBJECT CLASS "Recommendation G.774":sdhNE;**

**WITH ATTRIBUTE "Recommendation G.774": msTTPId ;**

**BEHAVIOUR msTcTTPSink-sdhNEBeh;**

**REGISTERED AS {g774-8NameBinding 9 } ;**

**msTcTTPSink-sdhNEBeh BEHAVIOUR  
DEFINED AS**

"The subordinate managed objects are instantiated when the radio protection switching function is present. Instances of this object may also be instantiated when other types of tandem connection protections in multiplex section layer are present.";

**6.6.6 msTcTTP Source**

**msTcTTPSource-sdhNE NAME BINDING**

**SUBORDINATE OBJECT CLASS msTcTTPSource AND SUBCLASSES;  
NAMED BY SUPERIOR OBJECT CLASS "Recommendation G.774":sdhNE;  
WITH ATTRIBUTE "Recommendation G.774":msTTPId ;  
BEHAVIOUR msTcTTPSource-sdhNEBeh;**

**REGISTERED AS {g774-8NameBinding 10 } ;**

**msTcTTPSource-sdhNEBeh BEHAVIOUR**

**DEFINED AS**

"The subordinate managed objects are instantiated when the radio protection switching function is present. Instances of this object may also be instantiated when other types of tandem connection protections in multiplex section layer are present.";

**6.6.7 vc4HopcTTP Sink**

**vc4HopcTTPSink-sdhNE NAME BINDING**

**SUBORDINATE OBJECT CLASS vc4HopcTTPSink AND SUBCLASSES;  
NAMED BY SUPERIOR OBJECT CLASS "Recommendation G.774":sdhNE;  
WITH ATTRIBUTE "Recommendation G.774":vc4TTPId ;  
BEHAVIOUR vc4HopcTTPSink-sdhNEBeh;**

**REGISTERED AS {g774-8NameBinding 11 } ;**
