FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

Recommendation ITU-T G.8151/Y.1374

Management aspects of the MPLS-TP network element

Amendment 2

1) Scope of amendment 2

This amendment specifies the requirements for managing the ITU-T G.8121.1/Y.1381.1 and ITU-T G.8121.2/Y.1381.2 specific equipment functions. It also contains updates to this Recommendation -for alignment with [ITU-T G.8121].

2) Updates to clause 1 "Scope"

Update to clause 1 "Scope" of [ITU-T G.8151] as follows.

1 Scope

...The generic requirements for managing transport network elements are specified in [ITU T G.7710] and the requirements for the management of equipment used in networks supporting an MPLS-TP are specified in [b-IETF RFC 5951]. This Recommendation specifies the requirements for managing the following MPLS-TP specific equipment functional blocks, which are defined in [ITU-T G.8121]:

- MPLS-TP layer connection function;
- MPLS-TP layer trail termination functions;
- MPLS-TP server to MPLS-TP client adaptation functions;
- MPLS-TP server to Ethernet client adaptation functions;
- SDH server to MPLS-TP client adaptation functions;
- PDH server to MPLS-TP client adaptation functions;
- OTN server to MPLS-TP client adaptation functions;
- ETH server to MPLS-TP client adaptation functions.

...The architecture described in this Recommendation for the management of MPLS-TP transport networks is based upon the following considerations:

- The management view of network element functional elements should be uniform whether those elements form part of an inter-domain interface or part of an intra-domain interface. Those properties necessary to form such a uniform management view are to be included in this Recommendation.
- MPLS-TP layer network entities (MTLNE) refer to trail termination, adaptation and connection functions as described in [ITU-T G.8110.1].
- A network element may only contain MPLS-TP layer network entities.
- A network element may contain both MPLS-TP layer network entities (MTLNE) and client layer network entities (CLNE).
- Client layer entities are managed as part of their own logical domain (e.g., Ethernet management network).

- CLNE and MTLNE may or may not share a common message communication function (MCF) and management application function (MAF) depending on application.
- CLNE and MTLNE may or may not share the same agent.
- Server layer network entities (SLNE) and MTLNE may or may not share the same agent.

This Recommendation provides a representation of the MPLS-TP technology using the methodologies that have been used for other transport technologies (e.g., SDH, OTN and Ethernet).

3) Updates to clause 2 "References"

3.1) References to be added

Add the following references to clause 2.

NOTE 1 – These MI signals are defined in MTDe_TT_So in [ITU-T G.8121]. [ITU-T G.8121.2] does not use these MI signals, as defined in Table 8-3 of this Recommendation.		
NOTE 2 – The value of L depends on implementation, e.g., 2 ³² .		

14) New clauses 8.7.1 and 8.7.2

Add new clauses 8.7.1 and 8.7.2 as shown below, after clause 8.7.

8.7.1 Connection – ITU-T G.8121.1 specific

For an MT.NE that supports the MT_C functions specified in [ITU-T G.8121.1], there is no additional MI to be managed beyond those listed in Table 8-4 above.

8.7.2 Connection – ITU-T G.8121.2 specific

For an MT.NE that supports the MT_C functions specified in [ITU-T G.8121.2], there is no additional MI to be managed beyond those listed in Table 8-2 above.
