Amendment 2

Recommendation ITU-T G.8262/Y.1362 (2010) –
Amendment 2

ITU-T G-SERIES RECOMMENDATIONS

TRANSMISSION SYSTEMS AND MEDIA, DIGITAL SYSTEMS AND NETWORKS

INTERNATIONAL TELEPHONE CONNECTIONS AND CIRCUITS	G.100–G.199
GENERAL CHARACTERISTICS COMMON TO ALL ANALOGUE CARRIER-TRANSMISSION SYSTEMS	G.200–G.299
INDIVIDUAL CHARACTERISTICS OF INTERNATIONAL CARRIER TELEPHONE SYSTEMS ON METALLIC LINES	G.300–G.399
GENERAL CHARACTERISTICS OF INTERNATIONAL CARRIER TELEPHONE SYSTEMS ON RADIO-RELAY OR SATELLITE LINKS AND INTERCONNECTION WITH METALLIC LINES	G.400–G.449
COORDINATION OF RADIOTELEPHONY AND LINE TELEPHONY	G.450–G.499
TRANSMISSION MEDIA AND OPTICAL SYSTEMS CHARACTERISTICS	G.600–G.699
DIGITAL TERMINAL EQUIPMENTS	G.700–G.799
DIGITAL NETWORKS	G.800–G.899
DIGITAL SECTIONS AND DIGITAL LINE SYSTEM	G.900–G.999
MULTIMEDIA QUALITY OF SERVICE AND PERFORMANCE – GENERIC AND USER-RELATED ASPECTS	G.1000–G.1999
TRANSMISSION MEDIA CHARACTERISTICS	G.6000–G.6999
DATA OVER TRANSPORT – GENERIC ASPECTS	G.7000–G.7999
PACKET OVER TRANSPORT ASPECTS	G.8000–G.8999
Ethernet over Transport aspects	G.8000–G.8099
MPLS over Transport aspects	G.8100–G.8199
Quality and availability targets	G.8200–G.8299
Service Management	G.8600–G.8699
ACCESS NETWORKS	G.9000–G.9999

For further details, please refer to the list of ITU-T Recommendations.

ITU-T Y-SERIES RECOMMENDATIONS

**GLOBAL INFORMATION INFRASTRUCTURE, INTERNET PROTOCOL ASPECTS AND NEXT-
GENERATION NETWORKS**

GLOBAL INFORMATION INFRASTRUCTURE

General	Y.100–Y.199
Services, applications and middleware	Y.200–Y.299
Network aspects	Y.300–Y.399
Interfaces and protocols	Y.400–Y.499
Numbering, addressing and naming	Y.500–Y.599
Operation, administration and maintenance	Y.600–Y.699
Security	Y.700–Y.799
Performances	Y.800–Y.899

INTERNET PROTOCOL ASPECTS

General	Y.1000–Y.1099
Services and applications	Y.1100–Y.1199
Architecture, access, network capabilities and resource management	Y.1200–Y.1299
Transport	Y.1300–Y.1399
Interworking	Y.1400–Y.1499
Quality of service and network performance	Y.1500–Y.1599
Signalling	Y.1600–Y.1699
Operation, administration and maintenance	Y.1700–Y.1799
Charging	Y.1800–Y.1899
IPTV over NGN	Y.1900–Y.1999

NEXT GENERATION NETWORKS

Frameworks and functional architecture models	Y.2000–Y.2099
Quality of Service and performance	Y.2100–Y.2199
Service aspects: Service capabilities and service architecture	Y.2200–Y.2249
Service aspects: Interoperability of services and networks in NGN	Y.2250–Y.2299
Numbering, naming and addressing	Y.2300–Y.2399
Network management	Y.2400–Y.2499
Network control architectures and protocols	Y.2500–Y.2599
Packet-based Networks	Y.2600–Y.2699
Security	Y.2700–Y.2799
Generalized mobility	Y.2800–Y.2899
Carrier grade open environment	Y.2900–Y.2999

FUTURE NETWORKS

CLOUD COMPUTING

Y.3000–Y.3499
Y.3500–Y.3999

Recommendation ITU-T G.8262/Y.1362

Timing characteristics of a synchronous Ethernet equipment slave clock

Amendment 2

Summary

Amendment 2 to Recommendation ITU-T G.8262/Y1362 (2010) adds a clarification in clause 10.2 and a new Appendix V, "Considerations for measuring noise transfer for EEC-Option 2 clocks".

History

Edition	Recommendation	Approval	Study Group
1.0	ITU-T G.8262/Y.1362	2007-08-13	15
1.1	ITU-T G.8262/Y.1362 (2007) Amd. 1	2008-04-29	15
1.2	ITU-T G.8262/Y.1362 (2007) Amd.2	2010-01-13	15
2.0	ITU-T G.8262/Y.1362	2010-07-29	15
2.1	ITU-T G.8262/Y.1362 (2010) Amd. 1	2012-02-13	15

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

Recommendation ITU-T G.8262/Y.1362

Timing characteristics of a synchronous Ethernet equipment slave clock

Amendment 2

1) Clause 10.2, EEC-Option 2

Replace the existing text in clause 10.2 with:

The maximum bandwidth requirement for an EEC is 0.1 Hz. Considerations for measuring conformance to this requirement are provided in Appendix V. There is no requirement for a minimum bandwidth.

Table 13 – Placeholder table

(This table has been intentionally left blank.)

(This figure has been intentionally left blank.)
--

Figure 11 – Placeholder figure

2) Appendix V

Add Appendix V, "Considerations for measuring noise transfer for EEC-Option 2 clocks".

Appendix V

Considerations for measuring noise transfer for EEC-Option 2 clocks

(This appendix does not form an integral part of this Recommendation.)

The noise transfer of an EEC clock generally behaves as a second-order system. The main parameters that impact wander accumulation in the network are the transfer bandwidth and the allowable gain peaking.

A common method to measure noise transfer for Option 2 networks involves the use of TDEV measurements. Since clock tolerance is measured using a signal that meets the TDEV network limit, measuring the output TDEV will provide an indication of the filtering provided by the clock. Some consideration is needed to accommodate gain peaking. For the EEC-Option 2, the output TDEV is raised by approximately 2% to reflect the appropriate gain.

For example, the output TDEV shall not exceed the mask shown in Figure V.1 when the reference signal is at the noise level given by the TDEV tolerance mask specified in Figure 8 of this Recommendation.

The bandwidth of the clock is approximated by the breakpoint observable at 3 seconds observation time. Details for the approximate relationship between clock bandwidth and TDEV can be found in Appendix I of [ITU-T G.812].

Note, as per [b-ITU-T O.174], additional sources of measurement error may need to be considered if using this methodology to verify the transfer characteristics.

In some cases, traditional methods such as the use of sinusoidal signals applied to the input and measured at the output may be suitable to determine the transfer characteristics of the clock. The specification of these methods is for further study.

The output TDEV noise transfer mask for EEC-Option 2 clocks is given in Table V.1

Table V.1 – Wander transfer for EEC-Option 2 (maximum output wander when input wander meets Table 10)

TDEV limit [ns]	Observation interval τ [s]
10.2	$0.1 < \tau \leq 1.73$
5.88τ	$1.73 < \tau \leq 30$
$32.26 \tau^{0.5}$	$30 < \tau \leq 1000$

The resultant TDEV is shown in the mask of Figure V.1.

Figure V.1 – Output TDEV noise transfer mask for EEC-Option 2 clocks

NOTE – The values of this transfer mask are 2% higher than the mask found in Figure 8 of this Recommendation in the passband.

3) Bibliography

Add the following Bibliography after Appendix V.
