Amendment 1 to ITU-T Recommendation G.994.1 (2003) was approved on 22 February 2004 by ITU-T Study Group 15 (2001-2004) under the ITU-T Recommendation A.8 procedure.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure e.g. interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementors are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database.

5) Clause 3, Definitions

Add the following definition to clause 3 and renumber all subsequent definitions:

3.1 capabilities: The "enabled" (= supported) set of functions, not necessarily the complete set of functions implemented in the unit.

6) New clause 13

Add new clause 13 as follows:

13 Management Information Base (MIB) elements

This clause specifies the physical layer management for HSTU systems. It specifies Network Management elements content for configuration management.

13.1 Configuration parameters

13.1.1 GHS A43 Toneset Maximum PSD level in downstream (GHS_A43_MAXPSDds)

The parameter¹ GHS_A43_MAXPSDds is defined as the maximum transmit PSD level for each individual G.hs tone of the A43 toneset in the downstream direction. The PSD level (in dBm/Hz) is calculated as the tone power averaged over a 4.3125 kHz bandwidth. The mandatory range to be supported by the HSTU-C is from –71.5 to –40 dBm/Hz, with 0.5 dB steps. If the value is set to the value –99, then the HSTU-C shall not transmit this toneset.

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set A43 as conveyed in the NPar(2) in Table 9.17/G.994.1 shall comply with the following constraint:

$$-3.65 - \text{Attenuation} - 36.35 \leq \text{GHS_A43_MAXPSDds}$$

13.1.2 GHS A43c Toneset Maximum PSD level in downstream (GHS_A43c_MAXPSDds)

The parameter¹ GHS_A43c_MAXPSDds is defined as the maximum transmit PSD level for each individual G.hs tone of the A43c toneset in the downstream direction. The PSD level (in dBm/Hz) is calculated as the tone power averaged over a 4.3125 kHz bandwidth. The mandatory range to be supported by the HSTU-C is from –71.5 to –40 dBm/Hz, with 0.5 dB steps. If the value is set to the value –99, then the HSTU-C shall not transmit this toneset.

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set A43c as conveyed in the NPar(2) in Table 9.17/G.994.1 shall comply with the following constraint:

$$-3.65 - \text{Attenuation} - 36.35 \leq \text{GHS_A43c_MAXPSDds}$$
