# **ITU-T Recommendation G.994.1**

## **Handshake procedures for digital subscriber line (DSL) transceivers**

### **Amendment 2**

#### **Summary**

This amendment adds the following functionalities to ITU-T Rec. G.994.1:

- Parameters to support ITU-T Rec. G.993.1 (2004).
- Carrier sets to support ITU-T Rec. G.993.1 (2004).
- Change of parameter names for T1E1.
- Parameters for the corrigendum to G.992.1 Amendment 1.
- Parameters to support Annex C/G.992.3.
- Parameters to resolve G.991.2 Regenerator Target Margin Problem.
- Parameters for TDIM and Ethernet bonding (D-1063, SS-091R1), and parameters for ATM bonding.
- Parameters to extend the amplitude range of B43 and J43 tonesets.
- Parameters to support new INP\_min values of 4, 8 and 16 in ITU-T Rec. G.992.3.
- Parameters to support new TU-12 TPS-TC in ITU-T Rec. G.991.2.

Amendment 2 to ITU-T Recommendation G.994.1 (2003) was approved on 13 June 2004 by ITU-T Study Group 15 (2001-2004) under the ITU-T Recommendation A.8 procedure.

## FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

## NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure e.g. interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

## INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementors are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database.

### Amendment 2

- 1) To support G.993.1 – 2004, and reference to ANSI and T1E1 documents, add the following parameters:

**Table 11.0.4/G.994.1 – Standard information field – SPar(1) coding – Octet 5**

Bits								SPar(1)s – Octet 5
8	7	6	5	4	3	2	1

x	x	x	x	x	x	1	x	<u>G.993.1/ANSI T1.424 Reserved for allocation by the ITU-T</u>
x	x	x	x	x	1	x	x	<u>G.993.1 – Annex I/T1E1 TRQ 12 Reserved for allocation by the ITU-T</u>
x	x	x	x	1	x	x	x	<u>Reserved for allocation by the ITU-T Variable Silence Period (Note)</u>
x	x	x	1	x	x	x	x	Reserved for allocation by the ITU-T
x	x	1	x	x	x	x	x	Reserved for allocation by the ITU-T
x	x	1	x	x	x	x	x	Reserved for allocation by the ITU-T
x	0	0	0	0	0	0	0	No parameters in this octet

NOTE – Setting the bit to binary ONE in an MS message requests a silence period of 10-640 seconds long, as specified by the Variable Silence Period length field. The station that has invoked the silence period by transmitting MS may terminate the silence period prior to the requested length, by restarting the handshake session (sending activation tones).

NOTE – The length of the corresponding NPar(3) field is variable and is a multiple of 4 octets. The length depends on the total number of bands "j" to be specified. "j" is the band index (starting from 1).

NOTE 1 – In some jurisdictions it may be necessary to limit the maximum <u>downstream</u> power level, for example -23.65 dBm/carrier where the PSD is limited to -60 dBm/Hz.					
NOTE 2 – It is expected that sufficient power back-off is applied to the upstream tones of short lines to avoid excessive crosstalk into adjacent pairs during G.994.1.

- 9) To support a larger range of power level for B43 and J43 tonesets, add the following text to clause 13:

### **13.1.3 GHS B43 and J43 Toneset Maximum PSD level in downstream (GHS\_BJ43\_MAXPSDds)**

The parameter GHS\_BJ43\_MAXPSDds is defined as the maximum transmit PSD level for each individual G.hs tone of the B43 and J43 tonesets in the downstream direction. The PSD level (in dBm/Hz) is calculated as the tone power averaged over a 4.3125 kHz bandwidth. The mandatory range to be supported by the HSTU-C is from –80 to –40 dBm/Hz, with 0.5 dB steps. If the value is set to the value –99, then the HSTU-C shall not transmit this toneset.

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set B43 as combined from the NPar(2) in Tables 9.21 and 9.21.1 shall comply with the following constraint:

$$-3.65 - \text{Attenuation\_B43} - 36.35 \leq \text{GHS\_BJ43\_MAXPSDds}$$

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set B43 as conveyed in the NPar(2) in Table 9.21 shall correspond with the actual attenuation clipped to a range of 31.5 dB as follows:

$$\text{Attenuation\_B43\_clipped} = \min(31.5, \text{Attenuation\_B43})$$

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set B43 as conveyed in the NPar(2) in Table 9.21.1 shall correspond with the remainder of the actual attenuation as follows:

$$\text{Attenuation\_B43\_remainder} = \text{Attenuation\_B43} - \text{Attenuation\_B43\_clipped}$$

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set J43 as combined from the NPar(2) in Tables 9.41 and 9.41.1 shall comply with the following constraint:

$$-3.65 - \text{Attenuation\_J43} - 36.35 \leq \text{GHS\_BJ43\_MAXPSDds}$$

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set J43 as conveyed in the NPar(2) in Table 9.41 shall correspond with the actual attenuation clipped to a range of 31.5 dB as follows:

$$\text{Attenuation\_J43\_clipped} = \min(31.5, \text{Attenuation\_J43})$$

The value of the Attenuation in G.994.1 Transmit Power per Carrier for carrier set J43 as conveyed in the NPar(2) in Table 9.41.1 shall correspond with the remainder of the actual attenuation as follows:

$$\text{Attenuation\_J43\_remainder} = \text{Attenuation\_J43} - \text{Attenuation\_J43\_clipped}$$
