FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

1.3) Clause 7.3.1.2.16

Modify clause 7.3.1.2.16 as follows:

7.3.1.2.16 VDSL2 limit PSD masks and band plans enabling (LIMITMASK)

This configuration parameter contains the ITU-T G.993.2 limit PSD masks of the selected PSD mask class, enabled by the near-end xTU on this line for each class of profiles. One LIMITMASK parameter is defined per the ITU-T G.993.2 Annex enabled in the XTSE.

The profiles are grouped in the following profile classes:

- Class 8: Profiles 8a, 8b, 8c, 8d
- Class 12: Profiles 12a, 12b
- Class 17: Profile 17a
- Class 30: Profile 30a
- Class 35: Profile 35b

For each profile class, several limit PSD masks of the selected PSD mask class (CLASSMASK) may be enabled. The enabling parameter is coded in a bit-map representation (0 if the associated mask is not allowed, 1 if it is allowed).

The parameter has the bit definitions for each PSD mask class as indicated in Table 7-7.

1.4) Clause 7.5.1.26.2

Modify clause 7.5.1.26.2 as follows:

7.5.1.26.2 Downstream H(f) linear subcarrier group size (HLINGds)

This parameter is the number of subcarriers per group used to report HLINpsds. The valid values are 1, 2, 4, and 8 and 16. For ADSL, this parameter is equal to one and, for VDSL2, it is equal to the size of a subcarrier group used to compute these parameters (see clause 11.4.1 of [ITU-T G.993.2]).

NOTE – The values of the subcarrier group size parameters (HLING, HLOGG, QLNG and SNRG) may not all be independent.

1.5) Clause 7.5.1.26.5

Modify clause 7.5.1.26.5 as follows:

7.5.1.26.5 Downstream H(f) logarithmic subcarrier group size (HLOGGds)

This parameter is the number of subcarriers per group used to report HLOGpsds. The valid values are 1, 2, 4 and 8, and 16. For ADSL, this parameter is equal to one and, for VDSL2, it is equal to the size of a subcarrier group used to compute these parameters (see clause 11.4.1 of [ITU-T G.993.2]).

1.6) Clause 7.5.1.27.2

Modify clause 7.5.1.27.2 as follows:

7.5.1.27.2 Downstream QLN(f) subcarrier group size (QLNGds)

This parameter is the number of subcarriers per group used to report QLNpsds. The valid values are 1, 2, 4, and 8, and 16. For ADSL, this parameter is equal to one and, for VDSL2, it is equal to the size of a subcarrier group used to compute these parameters (see clause 11.4.1 of [ITU-T G.993.2]).

1.7) Clause 7.5.1.28.2

Modify clause 7.5.1.28.2 as follows:

7.5.1.28.2 Downstream SNR(f) subcarrier group size (SNRGds)

This parameter is the number of subcarriers per group used to report SNRpsds. The valid values are 1, 2, 4, and 8 and 16. For ADSL, this parameter is equal to one and, for VDSL2, it is equal to the size of a subcarrier group used to compute these parameters (see clause 11.4.1 of [ITU-T G.993.2]).

2) Support for retransmitted DTU counter parameters

2.1) Clause 7.2.2.1.4

Add clause 7.2.2.1.4:

7.2.2.1.4 Retransmitted DTU – Channel (RTXTX-C)

This parameter is a count of rtx-tx anomalies (the number of retransmitted DTUs, see clause 12 of [ITU-T G.998.4]) occurring in the bearer channel during the accumulation period.

2.2) Clause 7.2.2.2.4.

Add clause 7.2.2.2.4:

7.2.2.2.4 Retransmitted DTU – Channel far-end (RTXTX-CFE)

This parameter is a count of far-end rtx-tx anomalies (the number of retransmitted DTUs, see clause 12 of [ITU-T G.998.4]) occurring in the bearer channel during the accumulation period.

2.3) Tables 7-24 and 7-25

Modify Tables 7-24 and 7-25 as follows:
