**Information technology – Generic coding of moving pictures  
and associated audio information: Systems**

**Amendment 2**

**Carriage of auxiliary video data**

**Summary**

With this Amendment, ISO/IEC 23002-3 auxiliary video streams can be carried over ITU-T Rec. H.222.0 | ISO/IEC 13818-1 streams. The corresponding descriptor indicates which video compression format is used, and contains supplemental information (SI) about the auxiliary video stream, as also defined in ISO/IEC 23002-3.

Depth maps and parallax maps, relating to stereoscopic-view video content, are the first specified types of auxiliary video streams. This amendment supports future extensions of ISO/IEC 23002-3.

**Source**

Amendment 2 to ITU-T Recommendation H.222.0 (2006) was approved on 29 August 2007 by ITU-T Study Group 16 (2005-2008) under the ITU-T Recommendation A.8 procedure. An identical text is also published as ISO/IEC 13818-1, Amendment 2.

## FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

## NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure e.g. interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

## INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

and associated audio information: Systems

## Amendment 2

## Carriage of auxiliary video data

## 1) Clause 2.4.3.7

Replace Table 2-27 with the following one:

Table 2-27 – Stream\_id\_extension assignments

| stream_id_extension                  | Note | stream coding                                 |
|--------------------------------------|------|---|
| 000 0000                             | 1    | IPMP Control Information stream               |
| 000 0001                             | 2    | IPMP stream                                   |
| 000 0010 ... 000 1111                |      | ISO/IEC 14496-17 text stream                  |
| <u>001 0000 ... 001 1111</u>         |      | <u>ISO/IEC 23002-3 auxiliary video stream</u> |
| <del>001</del> 010 0010 ... 011 1111 |      | reserved_data_stream                          |
| 100 0000 ... 111 1111                |      | private_stream                                |

NOTE 1 – PES packets of stream\_id\_extension 0b000 0000 (IPMP Control Information Stream) have a unique syntax specified in ISO/IEC 13818-11 (MPEG-2 IPMP).

NOTE 2 – PES packets of stream\_id\_extension 0b000 0001 (IPMP Stream) have a unique syntax specified in ISO/IEC 13818-11 (MPEG-2 IPMP).

## 2) Clause 2.4.4.9

Replace Table 2-34 with the following one:

| 48-63          | n/a      | n/a      | ITU-T Rec. H.222.0   ISO/IEC 13818-1 Reserved              |
| 64-255         | n/a      | n/a      | User Private   |

#### 4) New clauses 2.6.74 to 2.6.75

Add the following clauses:

##### 2.6.74 Auxiliary video stream descriptor

The auxiliary video stream descriptor specifies parameters for the decoding and interpretation of the auxiliary video stream to which the descriptor is associated. For each auxiliary video stream carried in an ITU-T Rec. H.222.0 | ISO/IEC 13818-1 stream, the auxiliary video stream descriptor shall be included in the PMT or in the PSM, if PSM is present in the program stream.

Table 2-92.3 – Auxiliary video stream descriptor

| Syntax                                | No. of bits | Mnemonic      |
|---------------------------------------|-------------|---------------|
| Auxiliary_video_stream_descriptor() { |             |               |
| <b>descriptor_tag</b>                 | <b>8</b>    | <b>uimsbf</b> |
| <b>descriptor_length</b>              | <b>8</b>    | <b>uimsbf</b> |
| <b>aux_video_codedstreamtype</b>      | <b>8</b>    | <b>uimsbf</b> |
| si_rbsp(descriptor_length-1)          |             |               |
| }                                     |             |               |

### 2.6.75 Semantic definition of fields in auxiliary video stream descriptor

**aux\_video\_codedstreamtype** – An 8-bit unsigned integer that indicates the compression coding type of the auxiliary video stream. The value of `aux_video_codedstreamtype` shall match one of the stream types defined in Table 2-34 for video (for instance 0x02, 0x10 or 0x1B). In order to convey additional information such as profile/level, a descriptor that corresponds to the `aux_video_codedstreamtype` may also be included in the PMT or in the PSM, if PSM is present in the program stream, for the auxiliary video data stream.

NOTE – For example, if the auxiliary video is encoded using ITU-T Rec. H.264 | ISO/IEC 14496-10 Video, then the value of `aux_video_codedstreamtype` is 0x1B and an AVC video descriptor (`descriptor_tag = 40`) can be optionally included.

**si\_rbsp()** – Supplemental Information RBSP as defined in ISO/IEC 23002-3. It shall contain at least one Auxiliary Video Supplemental Information (AVSI) message (also defined in ISO/IEC 23002-3). The type of auxiliary video is inferred from `si_rbsp()`. The total size of `si_rbsp()` shall not exceed 254 bytes.

## 5) New clause 2.16

*Add the following new clause:*

### 2.16 Carriage of auxiliary video streams

ISO/IEC 23002-3 specifies auxiliary video streams. ISO/IEC 23002-3 auxiliary video streams can be carried over ITU-T Rec. H.222.0 | ISO/IEC 13818-1 streams as follows:

- in Table 2-27, 16 `stream-id_extension` values are assigned to signal auxiliary video streams;
- in Table 2-34, one `stream-type` value is assigned to signal an auxiliary video stream;
- in Table 2-45, one descriptor tag is assigned to indicate an auxiliary video stream descriptor;
- in subclause 2.6.57 the auxiliary video stream descriptor is specified;
- the auxiliary video stream descriptor is associated to each auxiliary video stream.

Auxiliary video streams provide additional information about a conventional primary video sequence, as specified in ISO/IEC 23002-3. The auxiliary video stream shall be synchronized with its primary video counterpart through the use of timestamps in the associated PES header based on the same PCR clock.

In case a program contains multiple video streams, it will be up to the application to specify the association between the video component and auxiliary video streams.

## SERIES OF ITU-T RECOMMENDATIONS

|                 |   |
|-----------------|---|
| Series A        | Organization of the work of ITU-T   |
| Series D        | General tariff principles   |
| Series E        | Overall network operation, telephone service, service operation and human factors           |
| Series F        | Non-telephone telecommunication services  |
| Series G        | Transmission systems and media, digital systems and networks                                |
| <b>Series H</b> | <b>Audiovisual and multimedia systems</b>   |
| Series I        | Integrated services digital network   |
| Series J        | Cable networks and transmission of television, sound programme and other multimedia signals |
| Series K        | Protection against interference   |
| Series L        | Construction, installation and protection of cables and other elements of outside plant     |
| Series M        | Telecommunication management, including TMN and network maintenance                         |
| Series N        | Maintenance: international sound programme and television transmission circuits             |
| Series O        | Specifications of measuring equipment   |
| Series P        | Telephone transmission quality, telephone installations, local line networks                |
| Series Q        | Switching and signalling  |
| Series R        | Telegraph transmission  |
| Series S        | Telegraph services terminal equipment   |
| Series T        | Terminals for telematic services  |
| Series U        | Telegraph switching   |
| Series V        | Data communication over the telephone network   |
| Series X        | Data networks, open system communications and security                                      |
| Series Y        | Global information infrastructure, Internet protocol aspects and next-generation networks   |
| Series Z        | Languages and general software aspects for telecommunication systems                        |
