# **Recommendation ITU-T H.830.16**

# Conformance of ITU-T H.810 personal health system: Services interface Part 16: FHIR Observation Upload: Health & Fitness Service receiver

# **Summary**

Recommendation ITU-T H.830.16 provides a test suite structure (TSS) and the test purposes (TPs) for fast healthcare interoperability resource (FHIR) Observation Upload through the Health & Fitness Service (HFS) receiver in the Services interface, based on the requirements defined in the Recommendations of the ITU-T H.810 sub-series, of which Recommendation ITU-T H.810 (2017) is the base Recommendation. The objective of this test specification is to provide a high probability of interoperability at this interface.

Recommendation ITU-T H.830.16 includes an electronic attachment with the protocol implementation conformance statements (PICSs) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A.

# **History**

Edition	Recommendation	Approval	Study Group	Unique ID*
1.0	ITU-T H.830.16	2018-08-29	16	11.1002/1000/13677

# **Keywords**

Conformance testing, Continua Design Guidelines, e-health, Health & Fitness Service, ITU-T H.810, personal connected health devices, Services interface, Capability Exchange, FHIR Observation Upload.

<sup>\*</sup> To access the Recommendation, type the URL http://handle.itu.int/ in the address field of your web browser, followed by the Recommendation's unique ID. For example, <a href="http://handle.itu.int/11.1002/1000/11830-en">http://handle.itu.int/11.1002/1000/11830-en</a>.

#### **FOREWORD**

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

#### **NOTE**

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

# INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <a href="http://www.itu.int/ITU-T/ipr/">http://www.itu.int/ITU-T/ipr/</a>.

# Introduction

The table below shows the revision history of this test specification.

Version	Date	Revision history
1.0	2018-02-27	Initial release for the inclusion of FHIR Observation Upload for Health & Fitness Service receivers.

### Recommendation ITU-T H.830.16

# Conformance of ITU-T H.810 personal health system: Services interface Part 16: FHIR Observation Upload: Health & Fitness Service receiver

# 1 Scope

The scope of this Recommendation<sup>1</sup> is to provide a test suite structure (TSS) and the test purposes (TPs) for the Services interface based on the requirements defined in Continua Design Guidelines (CDG) [ITU-T H.810 (2017)]. The objective of this test specification is to provide a high probability of interoperability at this interface.

The TSS and TPs for the Services interface have been divided into the parts specified below. This Recommendation covers Part 16.

- Part 1: Web services interoperability. Health & Fitness Service sender
- Part 2: Web services interoperability. Health & Fitness Service receiver
- Part 3: SOAP/ATNA. Health & Fitness Service sender
- Part 4: SOAP/ATNA. Health & Fitness Service receiver
- Part 5: PCD-01 HL7 Messages. Health & Fitness Service sender
- Part 6: PCD-01 HL7 Messages. Health & Fitness Service receiver
- Part 7: Consent Management. Health & Fitness Service sender
- Part 8: Consent Management. Health & Fitness Service receiver
- Part 9: hData Observation Upload. Health & Fitness Service sender
- Part 10: hData Observation Upload. Health & Fitness Service receiver
- Part 11: Questionnaires. Health & Fitness Service sender
- Part 12: Questionnaires. Health & Fitness Service receiver
- Part 13: Capability Exchange. Health & Fitness Service sender
- Part 14: Capability Exchange. Health & Fitness Service receiver
- Part 15: FHIR Observation Upload. Health & Fitness Service sender
- Part 16: FHIR Observation Upload. Health & Fitness Service receiver

#### 2 References

The following ITU-T Recommendations and other references contain provisions which, through reference in this text, constitute provisions of this Recommendation. At the time of publication, the editions indicated were valid. All Recommendations and other references are subject to revision; users of this Recommendation are therefore encouraged to investigate the possibility of applying the most recent edition of the Recommendations and other references listed below. A list of the currently valid ITU-T Recommendations is regularly published. The reference to a document within this Recommendation does not give it, as a stand-alone document, the status of a Recommendation.

[ITU-T H.810 (2017)] Recommendation ITU-T H.810 (2017), Interoperability design guidelines for personal connected health systems: Introduction.

This Recommendation includes an electronic attachment with the protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A.

# [ITU-T H.812] Recommendation ITU-T H.812 (2017), Interoperability design guidelines for personal connected health systems: Services interface.

#### 5 Conventions

The key words "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "MAY", "MAY NOT" in this Recommendation are to be interpreted as in [b-ETSI SR 001 262].

- SHALL is equivalent to 'must' or 'it is required to'.
- SHALL NOT is equivalent to 'must not' or 'it is not allowed'.
- SHOULD is equivalent to 'it is recommended to'.
- SHOULD NOT is equivalent to 'it is not recommended to'.
- MAY is equivalent to 'is permitted'.
- MAY NOT is equivalent to 'it is not required that'.

NOTE – The above-mentioned key words are capitalized for illustrative purposes only and they do not appear capitalized within this Recommendation.

Reference is made in the ITU-T H.800-series of Recommendations to different versions of the Continua Design Guidelines (CDG) by a specific designation. The list of terms that may be used in this Recommendation is provided in Table 1.

Table 1 – List of designations associated with the various versions of the CDG

CDG release	Transposed as	Version	Description	Designation
2017	-	7.0	Release 2017 of the CDG including maintenance updates of the CDG 2016 and additional guidelines that cover new functionalities.	-
2016 plus errata	[ITU-T H.810 (2016)]	6.1	Release 2016 plus errata noting all ratified bugs [b-CDG 2016].	_
2016	_	6.0	Release 2016 of the CDG including maintenance updates of the CDG 2015 and additional guidelines that cover new functionalities.	Iris
2015 plus errata	[b-ITU-T H.810 (2015)]	5.1	Release 2015 plus errata noting all ratified bugs [b-CDG 2015]. The 2013 edition of [ITU-T H.810] is split into eight parts in the ITU-T H.810-series.	1
2015	-	5.0	Release 2015 of the CDG including maintenance updates of the CDG 2013 and additional guidelines that cover new functionalities.	Genome
2013 plus errata	[b-ITU-T H.810 (2013)]	4.1	Release 2013 plus errata noting all ratified bugs [b-CDG 2013].	_
2013	_	4.0	Release 2013 of the CDG including maintenance updates of the CDG 2012 and additional guidelines that cover new functionalities.	Endorphin

Table 1 – List of designations associated with the various versions of the CDG

CDG release	Transposed as	Version	Description	Designation
2012 plus errata	ı	3.1	Release 2012 plus errata noting all ratified bugs [b-CDG 2012].	_
2012	+	3.0	Release 2012 of the CDG including maintenance updates of the CDG 2011 and additional guidelines that cover new functionalities.	Catalyst
2011 plus errata	I	2.1	CDG 2011 integrated with identified errata.	_
2011	-	2.0	Release 2011 of the CDG including maintenance updates of the CDG 2010 and additional guidelines that cover new functionalities [b-CDG 2011].	Adrenaline

#### **6** Test suite structure

The test purposes (TPs) for the Services interface have been divided into the main subgroups specified below. Annex A describes the TPs for subgroups 2.7.1, 2.7.2 and 2.7.3 (shown in bold):

- Group 1: HFS sender (HFSS)
  - Group 1.1: Web services interoperability (WSI)
    - Subgroup 1.1.1: Basic profile (BP)
    - Subgroup 1.1.2: Basic security profile (BSP)
    - Subgroup 1.1.3: Reliable messaging (RM)
  - Group 1.2: Simple object access protocol (SOAP)
    - Subgroup 1.2.1: SOAP headers (HEAD)
  - Group 1.3: Audit trail and node authentication (ATNA)
    - Subgroup 1.3.1: General (GEN)
    - Subgroup 1.3.2: PCD-01 (PCD-01)
    - Subgroup 1.3.3: Consent Management (CM)
  - Group 1.4: PCD-01 HL7 messages (PCD-01-DATA)
    - Subgroup 1.4.1: General (GEN)
    - Subgroup 1.4.2: Design guidelines (DG)
    - Subgroup 1.4.3: Pulse oximeter (PO)
    - Subgroup 1.4.4: Blood pressure monitor (BPM)

- Subgroup 1.4.5: Thermometer (TH)
- Subgroup 1.4.6: Weighing scales (WEG)
- Subgroup 1.4.7: Glucose meter (GL)
- Subgroup 1.4.8: Cardiovascular fitness and activity monitor (CV)
- Subgroup 1.4.9: Strength fitness equipment (ST)
- Subgroup 1.4.10: Independent living activity hub (HUB)
- Subgroup 1.4.11: Adherence monitor (AM)
- Subgroup 1.4.12: Peak expiratory flow monitor (PF)
- Subgroup 1.4.13: Body composition analyser (BCA)
- Subgroup 1.4.14: Basic electrocardiograph (ECG)
- Subgroup 1.4.15: International normalized ratio (INR)
- Subgroup 1.4.16: Sleep apnoea breathing therapy equipment (SABTE)
- Subgroup 1.4.17: Insulin pump (IP)
- Subgroup 1.4.18: Continuous glucose monitor (CGM)
- Group 1.5: Consent Management (CM)
  - Subgroup 1.5.1: HFS XDR transaction (TRANS)
  - Subgroup 1.5.2: HFS metadata validation (META)
  - Subgroup 1.5.3: HFS consent directive validation (CDV)
- Group 1.6: hData Observation Upload (HDATA)
  - Subgroup 1.6.1: General (GEN)
- Group 1.7: Questionnaires (QUE)
  - Subgroup 1.7.1: General (GEN)
  - Subgroup 1.7.2: CDA validation (CDA)
- Group 1.8: Capability Exchange (CE)
  - Subgroup 1.8.1: General (GEN)
  - Subgroup 1.8.2: hData record format (HRF)
- Group 1.9: FHIR Observation Upload (FHIR)
  - Subgroup 1.9.1: General (GEN)
  - Subgroup 1.9.2: FHIR Encoding Guidelines (ENC)
- Group 2: HFS receiver (HFSR)
  - Group 2.1: Web service interoperability (WSI)
    - Subgroup 2.1.1: Basic profile (BP)
    - Subgroup 2.1.2: Basic security profile (BSP)
    - Subgroup 2.1.3: Reliable messaging (RM)
  - Group 2.2: SOAP (SOAP)
    - Subgroup 2.2.1: SOAP headers (HEAD)
  - Group 2.3: Audit (ATNA)
    - Subgroup 2.3.1: General (GEN)
    - Subgroup 2.3.2: PCD-01 (PCD-01)
    - Subgroup 2.3.3: Consent Management (CM)
  - Group 2.4: PCD-01 HL7 messages (PCD-01-DATA)

- Subgroup 2.4.1: General (GEN)
- Subgroup 2.4.2: Design guidelines (DG)
- Subgroup 2.4.3: Pulse oximeter (PO)
- Subgroup 2.4.4: Blood pressure monitor (BPM)
- Subgroup 2.4.5: Thermometer (TH)
- Subgroup 2.4.6: Weighing scales (WEG)
- Subgroup 2.4.7: Glucose meter (GL)
- Subgroup 2.4.8: Cardiovascular fitness and activity monitor (CV)
- Subgroup 2.4.9: Strength fitness equipment (ST)
- Subgroup 2.4.10: Independent living activity hub (HUB)
- Subgroup 2.4.11: Adherence monitor (AM)
- Subgroup 2.4.12: Peak expiratory flow monitor (PF)
- Subgroup 2.4.13: Body composition analyser (BCA)
- Subgroup 2.4.14: Basic electrocardiograph (ECG)
- Subgroup 2.4.15: International normalized ratio (INR)
- Subgroup 2.4.16: Sleep apnoea breathing therapy equipment (SABTE)
- Subgroup 2.4.17: Insulin pump (IP)
- Subgroup 2.4.18: Continuous glucose monitor (CGM)
- Group 2.5: Consent Management (CM)
  - Subgroup 2.5.1: HFS XDR transaction (TRANS)
  - Subgroup 2.5.2: HFS service validation (SER)
- Group 2.6: hData Observation Upload (HDATA)
  - Subgroup 2.6.1: General (GEN)
  - Subgroup 2.6.2: hData record format (HRF)

  - Subgroup 2.8.1: General (GEN)
  - Subgroup 2.8.2: hData record format (HRF)
- Group 2.9: FHIR Observation Upload (FHIR)
  - Subgroup 2.9.1: General (GEN)

# **7** Electronic attachment

The protocol implementation conformance statements (PICSs) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A can be downloaded from <a href="http://handle.itu.int/11.1002/2000/12067">http://handle.itu.int/11.1002/2000/12067</a>. See [b-HFSR PICS & PIXIT] and [b-HFSS PICS & PIXIT].

In the electronic attachment, letters "C" and "I" in the column labelled "Mandatory" are used to distinguish between "PICS" and "PIXIT", respectively, during testing. If the cell is empty, the corresponding PICS is "independent". If the field contains a "C", the corresponding PICS is dependent on other PICSs, and the logical expression is detailed in the "SCR\_Expression" field. The static conformance review (SCR) is used in the test tool to assert whether the PICS selection is consistent.

### Annex A

# **Test procedures**

(This annex forms an integral part of this Recommendation.)

# A.1 Test purpose definition conventions

The TPs are defined according to the following rules:

- **TP Id**: This is a unique identifier (TP/<TT>/<DUT>/<GR>/<SGR>/<XX> - <NNN>). It is specified according to the naming convention defined below:

Each TP identifier is introduced by the prefix "TP".

- <TT>: This is the test tool that will be used in the test case.
  - HFS: Health & Fitness Services Interface
- <DUT>: This is the device under test.
  - SEN: HFS sender
  - REC: HFS receiver
- <GR>: This identifies a group of test cases.
- <SGR>: This identifies a subgroup of test cases.
- <XX>: This identifies the type of testing.
  - BV: Valid behaviour test
  - BI: Invalid behaviour test
- <NNN>: This is a sequential number that identifies the TP.
- TP label: This is the title of the TP.
- **Coverage**: This contains the specification reference and clause to be checked by the TP.
  - Spec: This indicates the earliest version of the specification from which the testable items to be checked by the TP were included.
  - Testable item: This contains testable items to be checked by the TP.
- Test purpose: This is a description of the requirements to be tested.
- Applicability: This contains the PICS items that define if a test case is applicable or not for a specific device. When a TP contains an "ALL" in this field it means that it applies to the DUT within that scope of the test (specialization, transport used, etc.).
- Other PICSs: This contains additional PICS items (apart from the PICS specified in the Applicability row) which are used within the test case implementation and can modify the final verdict. When this row is empty, it means that only the PICS specified in the Applicability row are used within the test case implementation.
- **Initial condition**: This indicates the state to which the DUT needs to be moved at the beginning of TC execution.
- Test procedure: This describes the steps to be followed in order to execute the test case.
- Pass/Fail criteria: This provides criteria to decide whether the DUT passes or fails the test case.

Test purpos	se	Check that:			
		If the H&FS contains the "rfc7523" string in the grantTypes element of its OAuthDescriptor, it shall accept a valid JWT as an authorization grant.  [AND]			
		If an invalid JWT is provided, the H&FS shall provide information regarding the error in the response.			
Applicabilit	у	C_REC_000 AND (C_R	EC_GEN_007 OR C_REC_GE	N_008)	
Other PICSs		C_REC_FHIR_002			
Initial condition		The simulated PHG supporting FHIR Observation Reporting Client Continua Certified Capability Class is ready to retrieve the OAuthDescriptor of the H&FS and to perform a conditional create operation to upload a complete FHIR bundle (with no external references). PHG has previously retrieved the root file from the H&FS under test.			
Test procedure		The simulated PHG retrieves the OAuthDescriptor (in XML or JSON format) using the link element of the atom feed provided by the root file of the H&FS under test.			
		The simulated PHG contains the string '	checks that the grantTypes ele	ement of the OAuthDescriptor	
		3. The simulated PHG performs a create operation (HTTP POST) to upload a complete FHIR bundle containing a new measurement using TLS 1.1 and a single valid JSON Web Token.			
		4. The H&FS accepts	the request and returns <http< td=""><td>201&gt; (Created).</td></http<>	201> (Created).	
				HTTP POST) to upload a complete TLS 1.1 and an invalid JSON Web	
			t accept the request and returns tional information using the "eri	s an error (i.e. an <http 400=""> (Bad ror_description" or "error_uri"</http>	
Pass/Fail criteria		The OAuthDescriptor contains the "rfc7523" string in step 2.			
		The H&FS accepts the operation as described in step 4.			
		The H&FS rejects the step 6.	he operation and provides infor	mation about the error as described in	
Notes

Test purpose		Check that:	Check that:		
		A FHIR Observation Server shall support a minimum set of FHIR operations as defined by [RESTful FHIR]:			
Applicability	/	C_REC_000 AND C_RE	EC_GEN_007		
Other PICSs	<b>3</b>				
Initial condition		The simulated PHG supporting FHIR Observation Reporting Client Continua Certified Capability Class is ready to perform a conditional create operation to upload a complete FHIR bundle with an Observation resource (with no external references) to the H&FS under test. PHG has previously retrieved both the root file and the OAuthDescriptor from the H&FS under test. The H&FS under test have no previously stored resources.			
Test procedure		FHIR bundle contain bearer token obtained.  The H&FS accepts header, which contained.  The simulated PHG HL7 defined extensing (which references contained bearer token obtained non-existent Logical in the "If-None-Exist."  The H&FS accepts header, which contained extensing Resource as in step client credentials grather search parameter.  The H&FS ignores to the simulated PHG Observation resource obtained using the contained using the containe	ning an Observation resource ed using the client credentials the request and returns <htti "if-none-exist"="" (other="" (using="" 1.1="" 3="" 4)<="" <htti="" a="" ains="" an="" and="" ant="" as="" ce="" client="" conditional="" create="" credentials="" din="" ed="" er="" et="" finds="" grant="" h&f="" heade="" header="" i="" id="" in="" ion="" it="" logical="" mate="" new="" oau="" ones="" operation="" performs="" phg="" request="" resolved="" return="" returns="" simulated="" step="" t="" th="" than="" the="" tls="" to="" type).="" update="" uploaded="" use="" using="" ve="" within=""><th>P 201&gt; (Created) and a Location ersion Id of the created resources.  operation (HTTP POST) using the upload a FHIR Observation resource is) using TLS 1.1 and an OAuth 2.0 grant type. The simulated PHG uses a need in step 2) as the search parameter.  P 201&gt; (Created) and a Location ersion Id of the created resource.  operation (HTTP POST) using the upload the same FHIR Observation with 2.0 bearer token obtained using the uses Logical Id obtained in step 4 as er.  In (HTTP PUT) to update the FHIR LS 1.1 and an OAuth 2.0 bearer token this operation uses a non-existent id already exists for the given id) and ader, which contains the new Logical in (HTTP PUT) to update the FHIR LS 1.1 and an OAuth 2.0 bearer token this operation uses a non-existent id already exists for the given id) and ader, which contains the new Logical</th></htti>	P 201> (Created) and a Location ersion Id of the created resources.  operation (HTTP POST) using the upload a FHIR Observation resource is) using TLS 1.1 and an OAuth 2.0 grant type. The simulated PHG uses a need in step 2) as the search parameter.  P 201> (Created) and a Location ersion Id of the created resource.  operation (HTTP POST) using the upload the same FHIR Observation with 2.0 bearer token obtained using the uses Logical Id obtained in step 4 as er.  In (HTTP PUT) to update the FHIR LS 1.1 and an OAuth 2.0 bearer token this operation uses a non-existent id already exists for the given id) and ader, which contains the new Logical in (HTTP PUT) to update the FHIR LS 1.1 and an OAuth 2.0 bearer token this operation uses a non-existent id already exists for the given id) and ader, which contains the new Logical	
		9. The simulated PHG performs an update operation (HTTP PUT) to update the FHIR Observation resource uploaded in step 3 (using TLS 1.1 and an OAuth 2.0 bearer token obtained using the client credentials grant type). This operation uses the id obtained in step 4.			

	10. The H&FS accepts the request, updates the resource, and returns an <http 200=""> (OK) status code.</http>
	11. The simulated PHG performs a capabilities operation (HTTP GET) to retrieve the server's Capability Statement that defines how it supports resources (using TLS 1.1 and an OAuth 2.0 bearer token obtained using the client credentials grant type).
	<ol> <li>The H&amp;FS returns a Capability Statement that specifies which resource types and interactions are supported for the GET command.</li> </ol>
	13. The simulated PHG performs a transaction operation (HTTP PUT) to update the resource uploaded in 3 and to upload (create) a new measurement resource with known references (using TLS 1.1 and an OAuth 2.0 bearer token obtained using the client credentials grant type).
	14. The H&FS accepts the transaction operation and returns a successful response as both operations succeeded.
Pass/Fail criteria	The H&FS accepts the operations and responds as described in step 2, 4, 6, 8, 10, 12 and 14.

# SERIES OF ITU-T RECOMMENDATIONS

Series A	Organization of the work of ITU-T
Series D	Tariff and accounting principles and international telecommunication/ICT economic and policy issues
Series E	Overall network operation, telephone service, service operation and human factors
Series F	Non-telephone telecommunication services
Series G	Transmission systems and media, digital systems and networks
Series H	Audiovisual and multimedia systems
Series I	Integrated services digital network
Series J	Cable networks and transmission of television, sound programme and other multimedia signals
Series K	Protection against interference
Series L	Environment and ICTs, climate change, e-waste, energy efficiency; construction, installation and protection of cables and other elements of outside plant
Series M	Telecommunication management, including TMN and network maintenance
Series N	Maintenance: international sound programme and television transmission circuits
Series O	Specifications of measuring equipment
Series P	Telephone transmission quality, telephone installations, local line networks
Series Q	Switching and signalling, and associated measurements and tests
Series R	Telegraph transmission
Series S	Telegraph services terminal equipment
Series T	Terminals for telematic services
Series U	Telegraph switching
Series V	Data communication over the telephone network
Series X	Data networks, open system communications and security
Series Y	Global information infrastructure, Internet protocol aspects, next-generation networks, Internet of Things and smart cities
Series Z	Languages and general software aspects for telecommunication systems
