## **Recommendation ITU-T H.841**

# Conformance of ITU-T H.810 personal health devices: PAN/LAN/TAN interface Part 1: Optimized exchange protocol: Agent

# **Summary**

Recommendation ITU-T H.841 is a transposition of Continua Test Tool DG2013, Test Suite Structure & Test Purposes, PAN-LAN-TAN Interface; Part 1: Optimized Exchange Protocol. Agent (Version 1.6, 2014-01-24), that was developed by the Continua Health Alliance. A number of versions of this specification existed before transposition.

This Recommendation includes an electronic attachment with the protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of Annex A.

#### **FOREWORD**

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

#### **NOTE**

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

### INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <a href="http://www.itu.int/ITU-T/ipr/">http://www.itu.int/ITU-T/ipr/</a>.

## Introduction

This Recommendation is a transposition of Continua Test Tool DG2013, Test Suite Structure & Test Purposes, PAN-LAN-TAN Interface; Part 1: Optimized Exchange Protocol. Agent (Version 1.6, 2014-01-24), that was developed by the Continua Health Alliance. A number of versions of this specification existed before transposition and these can be found in the table below.

Version	Date	Revision history	
1.4	2012-10-05	Initial release for Test Tool DG2011. This uses "TSS&TP_1.5_PAN-LAN_PART_1_v1.3.doc" as a baseline and adds new features included in [b-CDG 2011] (Person ID and Errata).	
1.5	2013-05-24	Initial release for Test Tool DG2012. This uses "TSS&TP_DG2011_PAN-LAN_PART_1_v1.4.doc" as a baseline and adds new features included in [b-CDG 2012]:  • Adds glucose meter  • Adds body composition analyser device specialization  • Adds basic electrocardiograph device specialization	
1.6	2014-01-24	Initial release for Test Tool DG2013. This uses "TSS&TP_DG2012_PAN-LAN_PART_1_v1.5.doc" as a baseline and adds new features included in [b-ITU-T H.810 (2013)]:  • Adds glucose meter BLE  • Adds BLE SSP support  • Adds NFC new transport  • Adds INR device specialization	

## **Recommendation ITU-T H.841**

# Conformance of ITU-T H.810 personal health devices: PAN/LAN/TAN interface Part 1: Optimized exchange protocol: Agent

## 1 Scope

The scope of this Recommendation<sup>1</sup> is to provide a test suite structure and the test purposes (TSS & TP) for the PAN/LAN/TAN interface based on the requirements defined in the Continua Design Guidelines (CDG) [ITU-T H.810 (2015)]. The objective of this test specification is to provide a high probability of air interface interoperability between different devices.

TSS & TP for the PAN/LAN/TAN interface have been divided into the 10 parts specified below. This Recommendation covers Part 1.

- Part 1: Optimized exchange protocol [ISO/IEEE 11073-20601A] Agent
- Part 2: Optimized exchange protocol [ISO/IEEE 11073-20601A] Manager
- Part 3: Continua design guidelines. Agent
- Part 4: Continua design guidelines. Manager
- Part 5: Device specializations. Agent. This document is divided into 14 subparts:
  - Part 5A: Weighing scales
  - Part 5B: Glucose meter
  - **Part 5C**: Pulse oximeter
  - **Part 5D**: Blood pressure monitor
  - **Part 5E**: Thermometer
  - Part 5F: Cardiovascular fitness and activity monitor
  - Part 5G: Strength fitness equipment
  - **Part 5H**: Independent living activity hub
  - **Part 5I**: Adherence monitor
  - **Part 5J**: Insulin pump (Future development)
  - **Part 5K**: Peak flow
  - Part 5L: Body composition analyser
  - Part 5M: Basic electrocardiograph
  - Part 5N: International normalized ratio monitor
- Part 6: Device specializations. Manager
- Part 7: Continua design guidelines. Agent BLE
- Part 8: Continua design guidelines. Manager BLE
- Part 9: Personal health devices transcoding whitepaper. Agent
- Part 10: Personal health devices transcoding whitepaper. Manager

<sup>&</sup>lt;sup>1</sup> This Recommendation includes an electronic attachment with the protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation Annex A.

### 2 References

The following ITU-T Recommendations and other references contain provisions which, through reference in this text, constitute provisions of this Recommendation. At the time of publication, the editions indicated were valid. All Recommendations and other references are subject to revision; users of this Recommendation are therefore encouraged to investigate the possibility of applying the most recent edition of the Recommendations and other references listed below. A list of the currently valid ITU-T Recommendations is regularly published. The reference to a document within this Recommendation does not give it, as a stand-alone document, the status of a Recommendation.

### 3 Definitions

### 3.1 Terms defined elsewhere

This Recommendation uses the following terms defined elsewhere:

- **3.1.1 agent** [ISO/IEEE 11073-20601A]: A node that collects and transmits personal health data to an associated manager.
- **3.1.2** manager [ISO/IEEE 11073-20601A]: A node receiving data from one or more agent systems. Some examples of managers include a cellular phone, health appliance, set top box, or a computer system.

### 3.2 Terms defined in this Recommendation

None.

## 4 Abbreviations and acronyms

This Recommendation uses the following abbreviations and acronyms:

ATS Abstract Test Suite

CDG Continua Design Guidelines

DUT Device Under Test

GUI Graphical User Interface

INR International Normalized Ratio

IUT Implementation Under Test

MDS Medical Device System

NFC Near Field Communication

PAN Personal Area Network

TCWG Test and Certification Working Group

TP Test Purpose

TSS Test Suite Structure
USB Universal Serial Bus

WDM Windows Driver Model

## 5 Conventions

The key words "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "MAY", "MAY NOT" in this Recommendation are to be interpreted as in [b-ETSI SR 001 262].

- SHALL is equivalent to 'must' or 'it is required to'.
- SHALL NOT is equivalent to 'must not' or 'it is not allowed'.
- SHOULD is equivalent to 'it is recommended to'.
- SHOULD NOT is equivalent to 'it is not recommended to'.
- MAY is equivalent to 'is permitted'.
- MAY NOT is equivalent to 'it is not required that'.

NOTE – The above-mentioned key words are capitalized for illustrative purposes only and they do not appear capitalized within this Recommendation.

Reference is made in the ITU-T H.800-series of Recommendations to different versions of the Continua Design Guidelines (CDG) by a specific designation. The list of terms that may be used in this Recommendation is provided in Table 1.

Table 1 – List of designations associated with the various versions of the CDG

CDG release	Transposed as	Version	Description	Designation
2016 plus errata	[ITU-T H.810 (2016)]	6.1	Release 2016 plus errata noting all ratified bugs [ITU-T H.810 (2016)].	-

## **6** Test suite structure (TSS)

The test purposes (TPs) for the PAN/LAN/TAN interface have been divided into the main subgroups specified below. Annex A describes the TPs for subgroups 1.2.1, 1.2.2 and 1.2.3 (shown in bold).

- Group 1: Agent (AG)
  - Group 1.1: Transport (TR)
    - Subgroup 1.1.1: Design guidelines: Common (DGC)
    - Subgroup 1.1.2: USB design guidelines (UDG)
    - Subgroup 1.1.3: Bluetooth design guidelines (BDG)
    - Subgroup 1.1.4: Pulse oximeter design guidelines (PODG)
    - Subgroup 1.1.5: Cardiovascular design guidelines (CVDG)
    - Subgroup 1.1.6: Activity hub design guidelines (HUBDG)
    - Subgroup 1.1.7: ZigBee design guidelines (ZDG)
    - Subgroup 1.1.8: Glucose meter design guidelines (GLDG)
    - Subgroup 1.1.9: Bluetooth low energy design guidelines (BLEDG)
    - Subgroup 1.1.10: Basic electrocardiograph design guidelines (ECGDG)
    - Subgroup 1.1.11: NFC design guidelines (NDG)
  - Group 1.2: Optimized exchange protocol (OXP)
    - Subgroup 1.2.1: PHD domain information model (DIM)
    - Subgroup 1.2.2: PHD service model (SER)
    - Subgroup 1.2.3: PHD communication model (COM)
  - Group 1.3: Devices class specializations (CLASS)
    - Subgroup 1.3.1: Weighing scales (WEG)
    - Subgroup 1.3.2: Glucose meter (GL)
    - Subgroup 1.3.3: Pulse oximeter (PO)
    - Subgroup 1.3.4: Blood pressure monitor (BPM)
    - Subgroup 1.3.5: Thermometer (TH)
    - Subgroup 1.3.6: Cardiovascular (CV)
    - Subgroup 1.3.7: Strength (ST)
    - Subgroup 1.3.8: Activity hub (HUB)
    - Subgroup 1.3.9: Adherence monitor (AM)
    - Subgroup 1.3.10: Insulin pump (IP) (Future development)
    - Subgroup 1.3.11: Peak flow (PF)
    - Subgroup 1.3.12: Body composition analyser (BCA)
    - Subgroup 1.3.13: Basic electrocardiograph (ECG)
    - Subgroup 1.3.14: International normalized ratio (INR)
    - Subgroup 1.3.15: Sleep apnoea breathing therapy equipment (SABTE)
  - Group 1.4: Personal health device transcoding whitepaper (PHDTW)
    - Subgroup 1.4.1: Whitepaper general requirements (GEN)
    - Subgroup 1.4.2: Whitepaper thermometer requirements (TH)
    - Subgroup 1.4.3: Whitepaper blood pressure requirements (BPM)
    - Subgroup 1.4.4: Whitepaper heart rate requirements (HR)

- Subgroup 1.4.5: Whitepaper glucose meter requirements (GL)
- Subgroup 1.4.6: Whitepaper weight scale requirements (WS)
- Group 2: Manager (MAN)
  - Group 2.1: Transport (TR)

### 7 Electronic attachment

The protocol implementation conformance statements (PICS) and the protocol implementation extra information for testing (PIXIT) required for the implementation of this Annex can be downloaded from <a href="http://handle.itu.int/11.1002/2000/12067">http://handle.itu.int/11.1002/2000/12067</a>.

In the electronic attachment, letters "C" and "I" in the column labelled "Mandatory" are used to distinguish between "PICS" and "PIXIT" respectively during testing. If the cell is empty, the corresponding PICS is "independent". If the field contains a "C", the corresponding PICS is dependent on other PICS, and the logical expression is detailed in the "SCR\_Expression" field. The static conformance review (SCR) is used in the test tool to assert whether the PICS selection is consistent.

### Annex A

## **Test purposes**

(This annex forms an integral part of this Recommendation.)

### A.1 TP definition conventions

The test purposes (TPs) are defined according to the following rules:

- **TP Id**: This is a unique identifier (TP/<TT>/<DUT>/<GR>/<SGR>/<XX> <NNN>). It is specified according to the naming convention defined below:
  - Each test purpose identifier is introduced by the prefix "TP".
  - <TT>: This is the test tool that will be used in the test case:
    - PAN: Personal area network (Bluetooth or USB)
    - LAN: Local area network (ZigBee)
    - PAN-LAN: Personal area network (Bluetooth or USB) Local area network (ZigBee)
    - LP-PAN: Low power personal area network (Bluetooth Low Energy)
    - TAN: Touch area network (NFC)
    - PLT: Personal area network (Bluetooth or USB) Local area network (ZigBee) Touch area network (NFC)
  - <DUT>: This is the device under test:
    - AG: PAN/LAN Agent
    - MAN: PAN/LAN Manager
  - <GR>: This identifies a group of test cases.
  - <SGR>: This identifies a subgroup of test cases.
  - <XX>: This identifies the type of testing:
    - BV: Valid behaviour test
    - BI: Invalid behaviour test
  - <NNN>: This is a sequential number that identifies the test purpose.
- **TP label**: It is the TP's title.
- **Coverage**: This contains the specification reference and clause to be checked by the TP:
  - Spec: This indicates the earliest version of the specification from which the testable items to be checked by the TP were included.
  - Testable item: This contains the testable items to be checked by the TP.
- **Test purpose**: This is a description of the requirements to be tested.
- **Applicability**: This contains the PICS items that define if the test case is applicable or not for a specific device. When a TP contains an "ALL" in this field it means that it applies to the device under test within that scope of the test (specialization, transport used, etc.).
- Other PICS: This contains additional PICS items (apart from the PICS specified in the Applicability row) which are used within the test case implementation and can modify the final verdict. When this row is empty, it means that only the PICS specified in the Applicability row are used within the test case implementation.
- **Initial condition**: This indicates the state to which the DUT needs to be moved at the beginning of TC execution.

- **Test procedure**: This describes the steps to be followed in order to execute the test case.
- **Pass/Fail criteria**: This provides criteria to decide whether the DUT passes or fails the test case.

Test purpos	ie .	Check that:				
		The Agent supports a Get command that requests all attributes				
		[AND]				
		The Agent reports its MDS object attributes to the Manager using a Data message with the "Remote Operation Response   Get" response.				
		[AND]				
		MDS object contains all mandatory attributes, conditional attributes as required by their conditions and it may contain optional attributes				
		[AND]				
		The total size of the response does not exceed the maximum APDU size established by the specialization				
		[AND]				
		MDS object attributes are static /dynamic or observational.				
		[AND]				
		The handle is entered in the obj-handle field and it is not included in the attribute ID list of the request or in the attribute list of the response.				
		[AND]				
		The MDS object is not considered part of the configuration.				
		[AND]				
		Changes to any non-static attributes values on PM-stores or the MDS may be reported to the manager in event reports at the discretion of the agent				
		[AND]				

	A profile is expected to be identified by a name and a nomenclature value		
	[AND]		
	The agent shall not include the Base Offset Time in any Continua configurations except for Basic electrocardiograph (ECG) device specialization.		
	[AND]		
	If the base time (seconds field) is aligned with UTC (with an accuracy appropriate to the application), then this shall be designated by setting the mds-time-bo-time-utc-aligned bit in the Mds-Time-Info attribute.		
Applicability	C_AG_OXP_000		
Other PICS	C_AG_OXP_006, C_AG_OXP_007, C_AG_OXP_008, C_AG_OXP_009, C_AG_OXP_010, C_AG_OXP_011, C_AG_OXP_014, C_AG_OXP_015, C_AG_OXP_041, C_AG_OXP_071, C_AG_OXP_120, C_AG_OXP_188		
Initial condition	The simulated manager and the agent under test are in the unassociated state.		
Test procedure	The simulated manager receives an association request from the agent under test.		
	2. The simulated manager responds with a result = accepted-unknown-config.		
	The agent responds with a "Remote Operation Invoke   Confirmed Event Report" message with an MDC_NOTI_CONFIG event to send its configuration to the manager.		
	Check that the MDS object and its attributes are not present in the Configuration Event Report.		
	5. The simulated manager issues "roiv-cmip-get" command with the handle set to 0 (to request an MDS object) and an empty attribute-id-list to indicate all attributes. Record the invoke-id of the message sent.		
	6. The agent responds with with a "rors-cmip-get" service message in which the attribute-list contains a list of all implemented attributes of the MDS object:		
	Verify that the invoke-id is mirrored from the Get request.		
	Verify that the DataApdu contains the SEQUENCE GetResultSimple (0x02 0x03)		
	a. Verify that the GetResultSimple.obj-handle = 0x00 0x00		
	b. The GetResultSimple contains an AttributeList:		
	<ul> <li>AttributeList.count = number of implemented attributes that are included in the GET response. (must be greater than 3)</li> </ul>		
	☐ AttributeList.length = the length of the remainder of the APDU		
	Mandatory Attributes		
	Mandatory attribute HANDLE shall not be present.		
	b. Mandatory attribute System-Model		
	□ attribute-id = MDC_ATTR_ID_MODEL (0x09 0x28)		
	☐ attribute-value.length = 0xXX 0xXX		
	□ attribute-value = SystemModel

		TimeOutVar 1; C				

Test purpose	Check that:				
	If the attribute Confirm-Timeout is supported, then its value matches with the actual timeout value that the agent uses for the Confirmed Event Report generated from the MDS object.				
	[AND]				
	If the attribute is not present, the agent shall use the value 3 s				
Applicability	(C_AG_OXP_182 OR C_AG_OXP_183 OR C_AG_OXP_184 OR C_AG_OXP_189) AND C_AG_OXP_053 AND C_AG_OXP_000				
Other PICS					
Initial condition	The simulated manager and the agent under test are in the operating state.				
Test procedure	1. Record the Confirm-Timeout value from the Get MDS operation. If the attribute is not present in the MDS its value shall be TO <sub>cer-mds</sub> (3s).				
	Take a measurement with the agent under test that will provoke an MDS event report to be sent.				
	3. The agent sends a "Remote Operation Invoke   Confirmed Event Report".				
	4. The simulated manager does not respond for at least the time specified in the field Confirm-Timeout or 3 s if Confirm-Timeout is not supported.				
Pass/Fail criteria	The agent must wait the specifed time before unassociating.

		☐ attribute-value.length = 8 bytes
		☐ attribute-value = <not in="" relevant="" test="" this=""></not>
	I.	IF attribute Measurement Status is present
		☐ attribute-id = MDC_ATTR_MSMT_STAT
		□ attribute-type = MeasurementStatus
		□ attribute-value.length = 2 bytes
		☐ attribute-value = <not for="" relevant="" test="" this=""></not>
	m.	Check dynamic attributes that can be present: Metric-Structure-Small, Metric-Id, Metric-Id-List, Metric-Id-Partition, Unit-Code, Source-Handle-Reference, Label-String, Unit-Label-String, Measure-Active-Period
Pass/Fail criteria	All chec	ked values are as specified in the test procedure.

Notes	Checking that "IF C_AG_OXP_201=FALSE THEN mss-avail-stored data(1)=0" for MetricSpecSmall attribute has been removed because [ISO/IEEE 11073-20601A] has specified (subsection A.11.3) that "The setting of bits 0 to 5 is primarily informational and shall be set if the condition is true but- a manager cannot assume that if they are set the behavior will be observed".
	According to Device Specialization spec, standard configurations (most of them) state the value for bit mss-avail-stored-data to 1, even if the agent can not store measurements.
	So, if the test procedure checks that if C_AG_OXP_201=FALSE then mss-avail-stored-data =0 the test case will give a FAIL verdict and it would not be correct according to what [ISO/IEEE 11073-20601A] states in clause A.11.3.

Test purpose	е	Check that:				
		Scanner objects contain all mandatory attributes, conditional attributes as required by their conditions and it may contain optional attributes				
		[AND]				
		The nomenclature code to identify the Periodic Configurable Scanner class is MDC_MOC_SCAN_CFG_PERI				
		[AND]				
		Periodic Scanner Object attributes are static, dynamic or observational.				
		[AND]				
		Changes to any attribute values of metric and scanner objects shall be reported to the manager in scan event reports prior to sending event reports that depend on those values (e.g. scan-handle-attr-val-map and a group format event report or unit-code and the observed value).				
Applicability	1	C_AG_OXP_046 AND C_AG_OXP_000				
Other PICS		C_AG_OXP_144, C_AG_OXP_180				
Initial condition		The simulated manager and the agent under test have been associated, but the agent configuration is unknown for the simulated manager, so the agent and the simulated manager will be in the configuring state.				
Test procedu	ure	The simulated manager receives an assocation request from the agent under test.				
		2. The simulated manager re	esponds with a result = accepted	d-unknown-config.		
		The agent responds with a "Remote Operation Invoke   Confirmed Event Report" message with an MDC_NOTI_CONFIG event to send its configuration to the manager.				

4.		e Configurable Periodic Scanner object (ConfigReport -> ConfigObject-> AttributeList) st have:
	a.	Mandatory attribute Handle shall not be present
		☐ attribute-type = HANDLE
		☐ attribute-value = 2 bytes
		☐ attribute-value = must be unique <not in="" relevant="" test="" this=""></not>
	b.	Mandatory attribute Operational-State should be present in ConfigReport:
		☐ attribute-id = MDC_ATTR_OP_STAT
		□ attribute-type = OperationalState
		☐ attribute-value.length = 2 bytes
		☐ attribute-value = 0 at start
	C.	IF Attribute Scan-Handle-List is supported, it should be present in ConfigReport:
		☐ attribute-id = MDC_ATTR_SCAN_HANDLE_LIST
		☐ attribute-type = HANDLEList
		☐ attribute-value.length =
		☐ attribute-value = <not for="" relevant="" test="" this=""></not>
	d.	IF attribute Scan-Handle-Attr-Val-Map is supported, it should be present in ConfigReport:
		☐ attribute-id = MDC_ATTR_SCAN_HANDLE_ATTR_VAL_MAP
		□ attribute-type = HANDLEAttrValMap
		□ attribute-value.count = N
		☐ attribute-value.length = <variable></variable>
		attribute-value = N metric-derived object must be specified here, verify the correct format of the object and that the handle points to the object.
	e.	Mandatory attribute Confirm-Mode should be present in ConfigReport:
		☐ attribute-id = MDC_ATTR_CONFIRM_MODE
		□ attribute-type = ConfirmMode
		☐ attribute-value = One of:
		<ul><li>unconfirmed (0x00 0x00)</li></ul>
		<ul> <li>confirmed (0x00 0x01)</li> </ul>
	f.	Optional Confirm-Timeout should be present in ConfigReport:
		☐ attribute-id = MDC_ATTR_CONFIRM_TIMEOUT
		□ attribute-type = RelativeTime
		☐ attribute-value.length = 4 bytes
		□ attribute-value = <not for="" relevant="" test="" this="">.</not>
	g.	IF attribute Transmit-Window is supported, it should be present in ConfigReport:
		☐ attribute-id = MDC_ATTR_TX_WIND
		□ attribute-type = INT-U16
		☐ attribute-value.length = 2 bytes
		□ attribute-value = 1
	h.	Mandatory attribute Reporting-Interval should be present in ConfigReport:
		☐ attribute-id = MDC_ATTR_SCAN_REP_PD
		□ attribute-type = RelativeTime
		□ attribute-length = 4 bytes

		☐ attribute-value = <not for="" relevant="" test="" this=""></not>
		Furthermore check if the Variable MDS Scan Event Reports are sent by the agent for the Scanner object:
	a	. Wait for a Scan Event Report fom the agent.
		<ul> <li>Attributes whose values may be reported will be the attributes defined as dynamic: Operational-State, Scan-Handle-List, Scan-Handle-Attr-Val-Map, Confirm-Mode, Confirm-Timeout, Transmit-Window and Reporting-Interval.</li> </ul>
	b	<ul> <li>Set to enable Operational–State for the Periodic Scanner object to make the Scanner object send event reports:</li> </ul>
		<ul> <li>If the agent sends a Buf-Scan-Report-Fixed or Variable, Scan-Handle-List attributes shall be received previously.</li> </ul>
		<ul> <li>If the agent sends a Buf-Scan-Report-Grouped, Scan-Handle-Attr-Val-Map attributes shall be received previously.</li> </ul>
	c	<ol> <li>Set to disable Operation  State for Periodic Scanner object and repeat step 5b for every periodic scanner object.</li> </ol>
Pass/Fail criteria	All ch	ecked values are as specified in the test procedure.

	☐ attribute-type = PmStoreCapab			
	□ attribute-value = Record the value of bit 8 (Indicates that PM-Segments in the SegmSelection data type can be cleared by defining an AbsTimeRange)			
	4. The simulated manager shall send a Get-Segment-Info object action for the PM-Store object with SegmSelection set to all-segments.			
	5. The agent issues a response (rors-cmip-confirmed-action) with the PM-Segment attributes it supports, record the attributes "Segment-Start-Abs-Time" and "Segment-End-Abs-Time" of every PM-Segment.			
	IF bit 8 of PMStoreCapab was set:			
	6. The simulated manager sends a Clear-Segment:			
	a. Data APDU			
	☐ Type = Invoke   Confirmed Action,			
	☐ HANDLE = obj-handle			
	☐ Action = MDC_ACT_SEG_CLEAR			
	SegmSelection = abs-time-range, selecting a range with its boundaries set to an earlier date of any of the existing segments.			
	7. The agent under test operation response:			
	a. Data APDU			
	☐ Type = Roer			
	☐ ErrorResult = no-such-action (9)			
Pass/Fail criteria	In step 7 the agent must send the specified error.			
Notes	Error code was not clearly defined in the spec.  In the new edition of [ISO/IEEE 11073-20601A], the clear-segment using time range has been clarified. "For PM-segments cleared using the by time method, only PM-segments having Segment-Start-Abs-Time and Segment-End-Abs-Time fields entirely within the specified time period are cleared.", but if the Manager sends a Clear-Segment but the segment has not a Segment-Start-Abs-Time and Segment-End-Abs-Time within the specified time-period, the agent will send a Roer message.  At this point, it would be up to the agent what error code (Roer message) to send (No-suchaction, not-allowed-by-object, or both). If one wants to clear the segment due to all the internal timestamps that were saved in the segment as falling inside the given time period, then the agent could do that. Returning an error is also possible.

	5. The simulated manager sets the operational state of the scanner to 1.	
	6. Wait until the agent under test sends two event reports.	
	7. Take measurements faster than the Reporting Interval recorded in step 4.	
	8. Wait for the next event report.	
Pass/Fail criteria	<ul> <li>In step 6 verify that the received observed value is the same for the two events (same objects and attributes, but not attribute value).</li> </ul>	
	Verify that in step 8 the received event contains a number of measurements higher than the number of measurements received in step 6.	
Notes	In last paragraph of clause 6.3.9.5.1 there is an example where states that it must send ALL the measurements, not only the last change. It has to send all the registered observations.	
	Example: A Periodic Configurable Scanner is set up to 'scan' two Metric objects with a Reporting-Interval of 1 sec. The two objects update their corresponding observed value periodically with an interval of 1 sec and ½ sec respectively. The Periodic Configurable Scanner then issues Event Reports every second containing one observation scan of Metric object #1 and two observation scans of Metric object #2.

Test purpose		Check that:		
		If Agent supports the Clear-Segment (time range) method, then it responds to Clear-Segmen requests with a Data APDU with an operation type rors-cmip-confirmed-action		
		[AND]		
According to PM-Store-Capab attribute this method removes all entries from the specified PM-Segment, leaving it empty, or it removes the defined PM-Segment completely				

	[AND]		
	The Instance-Number of all other PM-Segments is unaffected by clearing a segment		
	[AND]		
	For PM-segments cleared using the by time method and using base time with offset, only PM-Segments having Segment-Start-BO-Time and Segment-End-BO-Time fields entirely within the specified time period are cleared. In using Segment-Start-BO-Time and Segment-End-BO-Time, the base time shall have a valid time (i.e., a non-zero value).		
Applicability	C_AG_OXP_041 AND C_AG_OXP_071 AND C_AG_OXP_072 AND C_AG_OXP_014 AND C_AG_OXP_000		
Other PICS			
Initial condition	The simulated manager and the agent under test are in the operating state and the agent supports at least one PM-Segment with data stored.		
Test procedure	Make sure the agent under test is not taking measurements which are stored in PM- Segments.		
	2. The simulated manager shall send a Get request for the PM-Store object with an attribute-id-list set to 0 to indicate all PM-Store attributes.		
	3. The agent under test issues a GET response with the PM-Store attributes, record the values of the PM-Store-Capab attribute:		
	a. PM-Store-Capab:		
	☐ attribute-id = MDC_ATTR_PM_STORE_CAPAB		
	□ attribute-type = PmStoreCapab		
	□ attribute-value = Record the value of bit 8 (Indicates that PM-Segments in the SegmSelection data type can be cleared by defining a time range)		
	4. The simulated manager shall send a Get-Segment-Info object action for the PM-Store object with SegmSelection set to all-segments.		
	5. The agent issues a response (rors-cmip-confirmed-action) with the PM-Segment attributes it supports, record the attributes "Segment-Start-BO-Time" and "Segment-End-BO-Time" of every PM-Segment.		
	IF bit 8 of PMStoreCapab was set:		
	6. The simulated manager sends a Clear-Segment:		
	a. Data APDU		
	☐ Type = Invoke   Confirmed Action,		
	☐ HANDLE = obj-handle		
	☐ Action = MDC_ACT_SEG_CLEAR		
	□ SegmSelection = bo-time-range, selecting a range with its boundaries that is not within the Segment-Start-BO-Time and Segment-End-BO-Time		
	7. The agent under test operation response:		
	a. Data APDU		
	☐ Type = Roer		
	☐ ErrorResult = no-such-action (9)		
Pass/Fail criteria	In step 7 the agent must send the specified error.		
Notes	Error code was not clearly defined in the spec.		
	In the new edition of [ISO/IEEE 11073-20601A], the clear-segment using time range has been clarified. "For PM-segments cleared using the by time method, only PM-segments having Segment-Start-Abs-Time and Segment-End-Abs-Time fields entirely within the specified time period are cleared.", but if the manager sends a Clear-Segment but the segment has not a Segment-Start-Abs-Time and Segment-End-Abs-Time within the specified time-period, the agent will send a Roer message.		
	At this point, it would be up to the agent what error code (Roer message) to send (No-suchaction, not-allowed-by-object, or both). If one wants to clear the segment due to all the internal timestamps that were saved in the segment as falling inside the given time period, then the agent could do that. Returning an error is also possible.

		If Agent transmits data in fixed format, then it reports the object handle and the attribute values are in the same order and size as specified in the Attribute-Value-Map		
		[AND]		
		These Attribute-Value-Map attribute shall be defined and transmitted to the manager before fixed format event report transfer commences		
		[AND]		
		The order of these elements is defined by the order in which the attribute identifiers are listed in the Attribute-Value-Map. The agent controls the order and communicates it to the manager via the Attribute-Value-Map attribute		
Applicability	у	(C_AG_OXP_182 OR C_AG_OXP_183 OR C_AG_OXP_184) AND C_AG_OXP_000		
Other PICS		C_AG_OXP_009		

Initial condition	The simulated manager and the agent under test are in the configuring state.
Test procedure	<ol> <li>The agent under test sends its configuration to the simulated manager. Save the number of measurement objects (config-obj-list.count=n).</li> </ol>
	<ol> <li>Every measurement object has an obj-handle and one or more attributes. The objects of interest for this test cases are all the metric derived ones (Obj-class=MDC_MOC_VMO_METRIC_ENUM 0x00 0x05, Obj-class=MDC_MOC_VMO_METRIC_NU 0x00 0x06, or Obj-class=MDC_MOC_VMO_METRIC_SA_RT 0x00 0x09). For each of them, check:</li> </ol>
	a. Attribute Attribute-Val-Map
	☐ attribute-id = MDC_ATTR_ATTRIBUTE_VAL_MAP (0x0A 0x55)
	☐ AttrValMap.count = N (number of object for this measurement object)
	☐ AttrValMap.length = L
	<ul> <li>For each attribute (of the N present) check the ID and the length at which it will be transmitted</li> </ul>
	☐ field-type=MDC_ATTR_*
	☐ field-value=0xXX 0xXX, where the length will be declared (K).
	3. Wait for the agent under test to reach the operating state and take some measurements.
	4. When the agent under test sends an event report to the simulated manager with measurement observations, check the following:
	event-type= MDC_NOTI_SCAN_REPORT_FIXED (0X0D 0X1D)
	<ul> <li>ObservationScanFixed.count= P (where P&lt;=N, and it is the number of objects reported in this event report)</li> </ul>
	<ul> <li>obj-handle = It has to be the same that obj-handle of the Measurement object sent in the agent's configuration</li> </ul>
	□ obs-val-data.length= 0xXX 0xXX, where the value is the length "K".
	☐ The actual observed measurement value will come in the next field, but this value is of no interest for this test case
	IF the Absolute-Time attribute is present in the Attribute-Val-Map THEN
	5. Record the value of the received Time Stamp
	6. The simulated manager issues a "roiv-cmip-get" command with the handle set to 0 (to request an MDS object) and an empty attribute-id-list to indicate all attributes.
	7. The agent responds with with a "rors-cmip-get" service message in which the attribute-list contains a list of all implemented attributes of the MDS object, record the Date-and-Time value.
Pass/Fail criteria	The Fixed Event report contains the same list of attributes (and sizes) in the same order that was declared in the configuration message
	The Time Stamp and Date-and-Time values are coherent
	The Attr-Val-Map for an object has to be received prior to the measurement (Config Report or MDS Event Report)

		Only Metric derived objects are supported as Tempora		Numeric and Enumeration objects)

	[AND]
	Temporarily Stored Measurements requires the use of time stamp attributes (Date-and-Time, Relative-Time, HiRes-Relative-Time)
	[AND]
	The Agent ensures ownership of the measurements is successfully transferred to the Manager by using confirmed event reports
	[AND]
	the Agent does not provide more than 25 Temporarily Stored Measurements in order to limit the amount of data transported by this mechanism
	[AND]
	The total size of the response does not exceed the maximum APDU size established by the specialization
Applicability	C_AG_OXP_032 AND C_AG_OXP_000
Other PICS	C_AG_OXP_041
Initial condition	The simulated manager and the agent under test are in the unassociated state.
Test procedure	The agent under test takes more than 25 measurements before connecting to the simulated manager.
	2. The agent under test gets connected to the simulated manager. The Metric-Spec-Small attribute sent in ConfigReport is recorded for numeric and enumeration objects.
	3. Once in the operating state we check that:
	<ul> <li>No more than 25 Temporary Stored Measurements are sent in the same event report.</li> </ul>
	b. That the event reports used to transmit the measurements should be confirmed
	<ul> <li>That every Temporary Stored Measurement sent has a Time Stamp attribute (Date- and-Time, Relative-Time or HIRes-Relative-Time)</li> </ul>
	d. Data sent is Enumerated or Numeric.
	e. Metric-Spec-Small – mss-avail-stored-data bit is set.
Pass/Fail criteria	The conditions in step 3 are met
	The total size of the response can not exceed the sum of the APDU sizes of the supported specializations (limited to an absolute limit of 64512 octets):
	o Pulse oximeter -> 9216 octets
	<ul> <li>Weighing scales -&gt; 896 octets</li> </ul>
	<ul> <li>Glucose meter -&gt; 5120 octets or 64512 octets if the agent supports PM-Store</li> </ul>
	o Blood pressure -> 896 octets
	o Thermometer -> 896 octets
	<ul> <li>Independent activity hub -&gt; 5120 octets</li> </ul>
	<ul> <li>Cardiovascular -&gt; 64512 octets or 6624 octets if the agent supports Step Counter Profile</li> </ul>
	o Strength -> 64512 octets
	o Adherence monitor -> 1024 octets
	o Peak flow -> 2030 octets
	o Body composition analyser -> 7730 octets
	<ul> <li>Basic ECG/Simple ECG -&gt; 7168 octets or 64512 octets if the agent supports PM- Store</li> </ul>
	<ul> <li>Basic ECG/Heart rate -&gt; 1280 octets or 64512 octets if the agent supports PM-Store</li> </ul>
	<ul> <li>International normalized ratio -&gt; 896 octets or 64512 if the agent supports PM-Store</li> </ul>
Notes	It is possible that the agent supports Temporarily Stored Measurements (TSM) for a set of objects and that it does not support TSM for other set of objects.

The test tool identifies the objects that support TSM using the Metric-Spec-Small attribute – mss-avail-stored-data(1) bit. When this bit is set to 1 in one object, the test tool assumes that this object stores TSM, although it is not totally sure because this bit is "informational".

From [ISO/IEEE 11073-20601A] clause A.11.3:

- IF object stores TSM THEN mss-avail-stored-data(1) SHALL be set to 1
- IF object does not store TSM THEN mss-avail-stored-data(1) MAY be set to 1 or 0

If agent under test sets mss-avail-stored-data(1) bit to 1 for one object but this object does not store TSM and the agent does not include the time stamp in event report, the test tool gives a FAIL verdict since the test tool identifies that this object stores TSM. When the vendor implements this behaviour in a device, a waiver may be required to complete the Certification. See Bugzilla #840 and contact Continua TOM for further details.

		2. The agent issues a GET response with the PM-Store attributes.			
		3. The simulated manager issues a Get-Segment-Info action with SemgSelection set to all-segments, for this test we are interested in:			
		a. Mandatory attribute PM-Segment-Entry-Map			
		☐ attribute-id = MDC_ATTR_PM_SEG_MAP			
		☐ attribute-type = PmSegmentEntryMap			
		☐ attribute-value =			
		4. The simulated manager sends a request for the PM-Segment that contains data:			
		a. Data APDU			
		☐ Type = Invoke   Confirmed Action,			
		☐ HANDLE = obj-handle			
		☐ Action = MDC_ACT_SEG_TRIG_XFER			
		☐ TrigSegmDataXferReq			
		5. The agent issues an action response:			
		a. Data APDU			
		☐ Type = Invoke   Confirmed Action,			
		☐ HANDLE = obj-handle			
		☐ Action = MDC_ACT_SEG_TRIG_XFER			
		☐ TrigSegmDataXferRsp			
		6. The agent under test starts Data transfer:			
		a. Data APDU			
		☐ Invoke   CfmEventReport			
		☐ Action = MDC_NOTI_SEGMENT_DATA			
		□ SegmentDataEvent:			
		<ul><li>sevtsta-first-entry(0)=1</li></ul>			
		<ul><li>segm-data-event-entries=Data</li></ul>			
		7. The simulated manager responds to transferred data APDU's with an abort transfer:			
		b. Data APDU			
		☐ Type = Invoke   Confirmed Action			
		☐ HANDLE = obj-handle			
		☐ Action = MDC_NOTI_SEGMENT_DATA			
		☐ SegmentDataResult			

	<ul><li>sevtsta-manager-abort(12)=1</li></ul>
Pass/Fail criteria	The format of the data has to coincide with the format expresed in the PmSegmentEntryMap field and the agent does not send any SegmentDataEvent after step 7.

TP label		Operating State. Abort message	
Coverage	Spec	[ISO/IEEE 11073-20601A]	
	Testable items	AgentStateMach 63; M	
Test purpos	е	Check that:	
		If abrt received, then the Agent moves to Unassociated state	
Applicability	1	C_AG_OXP_000	
Other PICS			
Initial condit	tion	The simulated manager and the agent are in the operating state.	
Test proced	ure	The simulated manager sends an Abort message to the agent under test.	
		2. Wait for an event report for the agent.	
Pass/Fail criteria The sim		The simulated manager must not receive any message other than an Association Request.	
Notes			

TP ld TP/PLT/AG/OXP/COM/BV-096_A		TP/PLT/AG/OXP/COM/BV-096_A	
TP label		Agent State machine. Connected Associated Configuring Waiting Approval 11	
Coverage Spec [ISO/IEEE 11073-20601A]		[ISO/IEEE 11073-20601A]	
	Testable items	AgentStateMach 78; M	
Test purpose		Check that:  If prst (Any APDU not covered in 5.* (corrupt, unknown, unexpected, etc) is received while in the waiting approval state, then agent transmits an abrt (reason undefined) and moves to unassociated state	

Applicability	C_AG_OXP_000
Initial condition	The agent under test is in the waiting approval state.
Test procedure	The simulated manager sends a badly formated message.
	The agent under test sends an abort message (abrt) with reason undefined to the manager and shall pass to the unassociated state.
Pass/Fail criteria	The agent sends the Abort message (abrt) with reason undefined and changes to the unassociated state
	The simulated manager must not receive any message other than an Association Request after step 2
Notes	

TP Id		TP/PLT/AG/OXP/COM/BV-097		
TP label		Agent State machine. Leaving Operating State 5		
Coverage	Spec	[ISO/IEEE 11073-20601A]		
	Testable items	AgentStateMach 80; M		
Test purpose	е	Check that:		
		If prst (Any APDU not covered in 2.* (corrupt, unknown, unexpected, etc)) is received while in operating state, then agent transmits an abrt (reason undefined) and moves to unassociated state		
Applicability	1	C_AG_OXP_000		
Other PICS				
Initial condition		The agent under test is in the operating state.		
Test procedure		The simulated manager issues a Prst message, rors-cmip- get.		
		The agent under test sends an abort message (abrt) with reason undefined to the manager and shall pass to the unassociated state.		
Pass/Fail criteria		The agent under test sends the Abort message (abrt) with reason undefined and changes to the unassociated state		
		The simulated manager must not receive any message other than an Association Request after step 2		
Notes

TP label		Agent State machine. Leaving Operating State 6		
Coverage	Coverage Spec [ISO/IEEE 11073-20601A]			
	Testable items	AgentStateMach 80; M		
Test purpos	e	Check that:		
		If prst (Any APDU not covered in 8.* (corrupt, unknown, unexpected, etc)) is received while in operating state, then agent transmits an abrt (reason undefined) and moves to unassociated state		
Applicability		C_AG_OXP_000		
Other PICS				
Initial condition		The agent under test is in the operating state.		
Test procedure		The simulated manager sends a badly formated message.		
		The agent under test sends an abort message (abrt) with reason undefined to the manager and shall pass to the unassociated state.		

Pass/Fail criteria	The agent under test sends the Abort message (abrt) with reason undefined and changes to the unassociated state
	The simulated manager must not receive any message other than an Association Request after step 2
Notes	

TP ld		TP/PLT/AG/OXP/COM/BV-098_A			
TP label		Agent State machine. Connected Disassociation 7			
Coverage Spec		[ISO/IEEE 11073-20601A]			
	Testable items	AgentStateMach 81; M			
Test purpose		Check that:  If prst (Any APDU not covered in 9.* (corrupt, unknown, unexpected, etc) is received while in the disassociating state, then agent transmits an abrt (Abort-reason undefined) and moves to unassociated state			
Applicability	<i>!</i>	C_AG_OXP_000			
Other PICS					
Initial condit	tion	The agent is in the unassociated state.			
Test procedure		The agent under test sends an Association Request to the simulated manager.			
		2. The simulated manager responds with an accepted-unknown-config.			
		3. The agent under test sends a configuration event report.			
		4. The simulated manager responds with an unsupported-configuration.			
		5. The agent sends a new configuration event report with a new configuration (if it has more).			
		6. Repeat the last two steps recording all the Configld-values until the agent sends a Release Request with the reason "no-more-configurations". The agent moves to the disassociating state.			
		7. The simulated manager sends a badly formatted message.			
		8. The agent responds with an Abort message (abrt) with reason undefined.			
		9. The agent and the manager move to the unassociated state.			
Pass/Fail criteria		The agent under test sends the abort message (abrt) with reason undefined and changes to the unassociated state			
		The simulated manager must not receive any message other than an Association Request after step 9.			
Notes					

TP ld		TP/PLT/AG/OXP/COM/BV-099		
TP label		Operating procedures. PM-Store Specific Attributes request		
Coverage Spec [I		[ISO/IEEE 11073-20601A]		
	Testable items	PersStoreMtrDatTransf 2; C		
Test purpose		Check that:		
		The attribute-id-list shall be left empty to query for all attributes of the PM-store object.  Alternatively, specific attributes of an object may be queried by listing the desired Attribute IDs found in Table 9. It is not required for an agent to support this capability. If this capability is not implemented then the agent shall respond with an error (roer) message with an error-value of not-allowed-by-object		
Applicability		C_AG_OXP_000 AND C_AG_OXP_041		
Other PICS				

Initial condition	The simulated manager and the agent under test are in the operating state.			
Test procedure	The simulated manager issues a "Remote Operation Invoke   Get" command with:			
	a. the Obj-handle set to PM-Store object handle (to request its attributes)			
	<ul> <li>the attribute-id-list.count=1 and a single AVA_Type MDC_ATTR_PM_STORE_CAPAB (0X0A 0X4D) to retrieve the mandatory "PM-Store-Capab" attribute</li> </ul>			
	2. The agent under test responds with:			
	<ul> <li>IF C_AG_OXP_101 THEN: with a "rors-cmip-get" service message which contains the "PM-Store-Capab"</li> </ul>			
	<ul> <li>ELSE: with a "roer" service message with the error-value set to not-allowed-by- object (24)</li> </ul>			
	3. The simulated manager issues a "Remote Operation Invoke   Get" command with:			
	<ul> <li>a. the Obj-handle set to PM-Store object handle (to request its attributes)</li> </ul>			
	b. the attribute-id-list empty to request all the attributes of PM-Store object			
	4. The agent responds with with a "rors-cmip-get" service message which contains all the supported attributes of the PM-Store object.			
	5. The simulated manager issues a "Remote Operation Invoke   Get" command with:			
	a. the Obj-handle set to PM-Store object handle (to request its attributes)			
	b. the attribute-id-list set to an attribute NOT supported by the PM-Store object			
	6. The agent responds with a "rors-cmip-get" service message:			
	<ul> <li>IF C_AG_OXP_101 THEN: the attribute-list must be empty</li> </ul>			
	<ul> <li>ELSE: with with a "roer" service message with the error-value set to not-allowed-by- object (24)</li> </ul>			
	7. The simulated manager issues a "Remote Operation Invoke   Get" command with:			
	<ul> <li>a. the Obj-handle set to PM-Store object handle (to request its attributes)</li> </ul>			
	b. the attribute-id-list contains one supported attribute and one unsupported attribute			
	8. The agent responds with a "rors-cmip-get" service message:			
	IF C_AG_OXP_101 THEN: the attribute-list must contain the supported attribute			
	ELSE: with with a "roer" service message with the error-value set to not-allowed-by- object (24)			
Pass/Fail criteria	In step 2 the agent properly sends the requested attribute or the error			
	In steps 6 and 8 the received attribute list must be empty if NOT C_AG_OXP_101 or roer if the action is not supported

## SERIES OF ITU-T RECOMMENDATIONS

Series A	Organization of the work of ITU-T
Series D	General tariff principles
Series E	Overall network operation, telephone service, service operation and human factors
Series F	Non-telephone telecommunication services
Series G	Transmission systems and media, digital systems and networks
Series H	Audiovisual and multimedia systems
Series I	Integrated services digital network
Series J	Cable networks and transmission of television, sound programme and other multimedia signals
Series K	Protection against interference
Series L	Environment and ICTs, climate change, e-waste, energy efficiency; construction, installation and protection of cables and other elements of outside plant
Series M	Telecommunication management, including TMN and network maintenance
Series N	Maintenance: international sound programme and television transmission circuits
Series O	Specifications of measuring equipment
Series P	Terminals and subjective and objective assessment methods
Series Q	Switching and signalling
Series R	Telegraph transmission
Series S	Telegraph services terminal equipment
Series T	Terminals for telematic services
Series U	Telegraph switching
Series V	Data communication over the telephone network
Series X	Data networks, open system communications and security
Series Y	Global information infrastructure, Internet protocol aspects and next-generation networks, Internet of Things and smart cities
Series Z	Languages and general software aspects for telecommunication systems
