### ITU-T L.1410 – Example of hybrid life cycle assessment of the aggregated second order effects of selected information and communication technology services

### Summary

Supplement 34 to ITU-T L-series Recommendations presents three case studies of the life cycle assessment (LCA) of the second order effects of some selected information and communication technology (ICT) services running upon three different primary subscription services: the 4th Generation Long Term Evolution (4G LTE) service, the 3rd Generation Wideband Code Division Multiple Access (3G W-CDMA) service, and an optical fixed Internet protocol (IP) network (broadband NW), all provided by Nippon Telegraph and Telephone Corporation (NTT) groups in Japan.

The goal of these case studies is to clarify the second order effects per private subscriber of the ICT services in compliance with ITU-T L.1410 for the assessed ICT services. The second order effects of each target scenario, e.g., e-mail, video/music on demand and games, provided by each ICT service are evaluated by comparative analyses between each target scenario and corresponding reference scenarios, which are defined as a private subscriber's behaviour when not using an ICT service. Both scenarios are defined in a questionnaire investigation given to users. The total second order effects per subscriber for each ICT service are obtained by aggregating the results of these comparative analyses based on hybrid LCA.

### History

| Edition | Recommendation    | Approval   | Study Group | Unique ID*         |
|---------|-------------------|------------|-------------|--------------------|
| 1.0     | ITU-T L Suppl. 34 | 2016-10-14 | 5           | 11.1002/1000/13157 |

### Keywords

4th generation long term evolution (4G LTE), 3rd generation wideband code division multiple access (3G W-CDMA), comparative analysis, ICT services, information and communication technologies (ICTs), input–output analysis (IOA), optical fixed IP network (broadband NW), public switched telephone network (PSTN), second order effect.

#### FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications, information and communication technologies (ICTs). The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

#### NOTE

In this publication, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this publication is voluntary. However, the publication may contain certain mandatory provisions (to ensure, e.g., interoperability or applicability) and compliance with the publication is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the publication is required of any party.

#### INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this publication may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the publication development process.

As of the date of approval of this publication, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this publication. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <u>http://www.itu.int/ITU-T/ipr/</u>.

### **Supplement 34 to ITU-T L-series Recommendations**

### ITU-T L.1410 – Example of hybrid life cycle assessment of the aggregated second order effects of selected information and communication technology services

### 1 Scope

This Supplement provides an example of the life cycle assessment (LCA) of information and communication technology (ICT) services and networks, especially for the second order effects of network-based ICT services, such as e-mail, video/music on demand and games.

This Supplement presents case studies of the LCA of the second order effects per private subscriber of some selected ICT services running upon three different primary subscription services: the 4th Generation Long Term Evolution (4G LTE) service, the 3rd Generation Wideband Code Division Multiple Access (3G W-CDMA) service and an optical fixed Internet protocol (IP) network (broadband NW), all provided by Nippon Telegraph and Telephone Corporation (NTT) groups in Japan. The assessments were performed as comparative analyses in line with [ITU-T L.1410] through a hybrid approach combining elements of process-sum and environmentally extended economic input-output (IO) LCAs.

Scenarios for comparison were based on the results of a customer questionnaire.

### 5 Methodological framework

#### 5.1 Evaluation procedure

The evaluation procedure (see Figure 1) is:

- select target scenarios and corresponding reference scenarios for comparative analyses by customer questionnaire;
- execute the comparative analysis of each scenario in line with [ITU-T L.1410];
- aggregate each result to obtain total second order effects of the assessed target scenarios.

**Figure 1-1 – Evaluation procedure** 

### 5.2 Goal and scope definition

### 5.2.1 Goal of the study

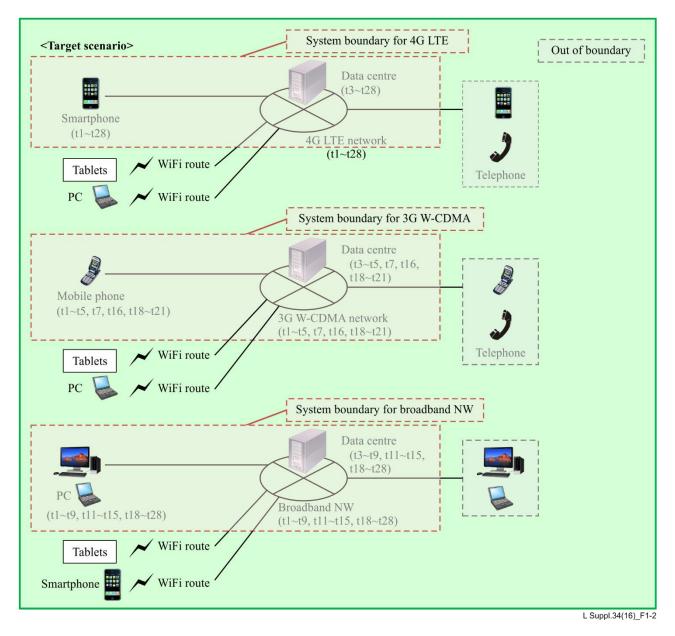

The purpose of this case study is to provide an example of the LCA of ICT services and networks, especially for the second order effects of network-based ICT services, e.g., e-mail, video/music on demand and games.

The goal of these case studies is to clarify the second order effects per private subscriber of some selected ICT services running upon three different primary subscription services: the 4th Generation Long Term Evolution (4G LTE) service, the 3rd Generation Wideband Code Division Multiple Access (3G W-CDMA) service and an optical fixed IP network (broadband NW), all provided by Nippon Telegraph and Telephone Corporation (NTT) groups in Japan. Scenarios for comparison were based on the results of a customer questionnaire. In this case study, a hybrid approach that includes environmentally extended economic input–output analysis (IOA) for production and end-of life was applied.

### 5.2.2 Scenarios for comparison

Figures 1-2 and 1-3 show model diagrams of target scenarios and reference scenarios, respectively.

NOTE – The target scenarios for mobile networks only include access by smartphones (for LTE) and feature phones (for W-CDMA). This is a simplification as in reality networks are also accessed by other devices such as personal computers (PCs), laptops and tablets; additionally, different types of phones may be used on both networks.

**Figure 1-2 – Target scenario** 

NOTE – Symbols tn (n = 1-28) correspond to target scenario identifiers (IDs) in Table1-1.

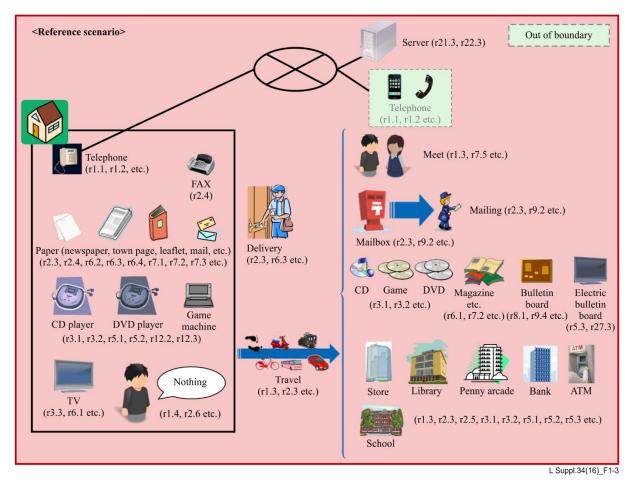

Figure 1-3 – Reference scenario

NOTE – Symbols rn (n = 1-28) correspond to reference scenario IDs in Table1-1.

Scenarios for comparison were based on the results of questionnaire 1 for private customers of each ICT service, which are shown in Table 1-1.

In the reference scenario, users utilize different devices, e.g., paper, compact disc (CD) players or televisions (TVs), to perform different services/functions, e.g., meeting or sending mail. For each function, the usage per year is modelled based on the anticipated use of these services if no ICT service were available, based on a questionnaire on which private customers estimate what they would have done in that case. Usage per year was checked for all ICT services. As an example, for the function "talk to someone", users were asked whether they would use a home telephone or a public phone, meet in person or do nothing if they could not have used the smartphone, for example. Based on the responses, the reference scenario was set up. To model this scenario each function was represented by the greenhouse gas (GHG) emissions associated with the equipment used to perform the alternative activity. For example, "using a home phone" was modelled on the impact of the ICT hardware needed for use and "meeting someone" on the transport needed, as further specified in clause 5.2.4. In total, 121 reference cases were defined.

The allocation of equipment impact to different functions was based on usage time, as experienced by the user, e.g., time spent on a phone call.

The usage of different ICT services in the target scenarios were defined by statistics from the Ministry of Internal Affairs and Communications in Japan, which shows the actual use of each ICT service. Each ICT service was then modelled, based on impact of the equipment needed to perform the services, as specified in clause 5.2.4. Also, in this case, the allocation of equipment impact on the different functions was based on usage time.

The results of the questionnaire are shown in Appendix III.

|                               | Mobile | Mobile network |                 | Target scenario |                    | Reference scenario |                              |  |               |      |                          |

Table 1-1 – Target and reference scenarios

### 5.2.3 Functional unit

As described in clauses 5.1 and 5.2.2, the second order effects of each ICT service were evaluated by comparative analyses between target scenarios and corresponding reference scenarios, which were objectively set by using a customer questionnaire. Therefore, the functional unit was set as "completion of functions shown in Table 1-1 by a subscriber in a year".

### 5.2.4 System boundaries

To achieve the goal of this case study, each comparative analysis was carried out according to the following principles:

- GHG emissions were evaluated using the economic IO approach for the domestic part of raw material acquisition (RMA) and production. Due to restrictions on the IOA data used, non-domestic raw material and production activities were excluded. Furthermore, the results for RMA and production could not be separated.

The items considered and the life cycle stages evaluated in this case study are shown below.

Where they appear, the scenario IDs in subsequent tables correspond to those of Table 1-1.

| Life cycle stage/category                 | Raw material<br>acquisition and<br>production | Use          | End-of-life<br>treatment<br>(EoLT) | Items        | Scenario ID           |

### 5.2.5 Cut-off

The study made the following cut-offs:

- The Japanese IO data are based on domestic activities only. For this reason, all non-domestic activities related to RMA and production were cut-off. However, this cut-off is only partial as imports and exports are considered in the IO data to some extent. Due to lack of data, the impact from this cut-off could not be estimated.
- The final transportation of ICT goods used in each scenario, such as smart phone, TV and servers in data centres, were cut-off.

### 5.2.6 Operating lifetime

This study assumes that each piece of equipment is used during its useful life in Japan, i.e. its depreciation time defined as the time during which a (new) revenue-generating asset reaches its residual economic value (sometimes referred to as its "legal lifetime") [b-Life, 2016], with some exceptions. The useful lifetimes and sources are shown in Table 1-4.

| Item                     | Useful lifetime<br>[year]  | Source  | Scenario ID           |
|--------------------------|--|---|-----------------------|
| Smart phone              | 3.2  | Cabinet Office, Government of<br>Japan [b-Consumer goods,<br>2016]    | t1-t28                |
| Mobile phone             | 3.2  | Cabinet Office, Government of<br>Japan [b-Consumer goods,<br>2016]    | t1-t5,t7,t16,t18-t21  |
| PC                       | 4  | Statutory useful lifetime in Japan [b-Life, 2016]                     | t1-t9,t11-t15,t18-t28 |

## Table 1-5 – Useful lifetime used in this case study: reference scenario

### 6 Data collection

The collected data items for evaluating the GHG emissions of the target and reference scenarios are shown in Table 6-1 and Table 6-2, respectively. The GHG emissions of 4G LTE NW, 3G W-CDMA NW, broadband NW and data centres were calculated with the emissions factor per unit information. The GHG emissions of PSTN were calculated with the emissions factor per line.

### Table 6-2 – Data items acquired in this case study: reference scenario

#### 7 **Data calculation**

The data calculation was conducted on the basis of the conditions required by [ISO 14040], [ISO 14044] and [ITU-T L.1410].

[ITU-T L.1410] requires the calculation of seven types of GHGs, but only CO<sub>2</sub> emissions were calculated in this study, mainly because of the difficulty in acquiring adequate high quality data.

The calculation equations for GHG emissions (CO<sub>2</sub> emissions only in this study) and the collected data are shown in Table 7-1.

The GHG emissions of the mobile network, data centres and PSTN were calculated with corresponding emission factors per amount of data, in megabytes.

As shown in Table 7-1, for each included life cycle stage, the impact was calculated using the environmentally extended IOA emissions factors, defined per amount of data, kilowatt hours or similar. These emission factors were then recalculated to emission factors per equipment and use stage, using the previously described usage information. As an example, the RMA and production for the mobile network used an emission factor per megabyte, which was multiplied by the usage, by considering use frequency, time of use, percentage of users performing the activity and information content per activity.

The CO<sub>2</sub> emission values calculated per equipment were recalculated to reflect the number of users per device while assuming one user per smart phone and mobile phone, and 2.3 users per fixed line. This was implemented by multiplication by a factor of N (number of user per line) to obtain the CO<sub>2</sub> emission per each ICT service usage.

### Table 7-2 – LCA databases and public data used in this case study

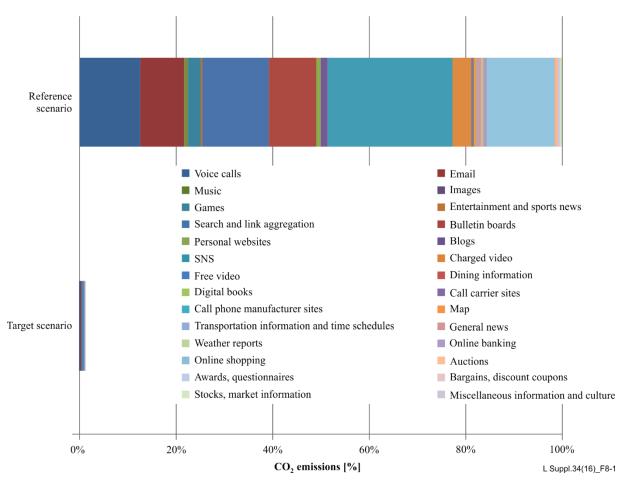

### 8 Results

The results for the assessed ICT services were combined for each of the three scenarios and are presented in this clause. As the reference for each scenario is the assumed use if the service had not been available, the different scenarios (LTE, W-CDMA and IP broadband) are compared to different baselines and the results for these scenarios cannot be directly compared.

### 8.1 4G LTE service

Figure 8-1 and Table 8-1 show the assessment results by function.

Functions such as "Voice call", "Email", "Search and link aggregation", "Bulletin board", "SNS", and "Online shopping" have large second order effects.

**Figure 8-1** – Assessment results by function (4G LTE service)

NOTE – This LCA result cannot be compared with that of another LCA unless all assumptions and modelling choices are equal.

| Function   | CO <sub>2</sub> emission [%] |                    |  |  |  |

Table 8-9 – Assessment results by life cycle stage (broadband NW)

# Appendix I

## Reporting according to tables in Annex L of [ITU-T L.1410]

The following tables have been selected and completed by taking into consideration the goal and scope of this case study. Their numbering follows that of [ITU-T L.1410].

Table L.1 as presented in Annex L of [ITU-T L.1410] shows a cover page completed here to report the results of the case study assessment described in this Supplement.

| REPORTING   |     |    |  |  |  |
|---|-----|----|--|--|--|

| NOTE 2 – The amount of recy production waste. | cled raw material used in the | production process, this i                   | on process, i.e., total input minu<br>include the raw material contain<br>te and recycling of total conten | ned in the product and th                          | e related |

#### Table L.5 of ITU-T L.1410 – Reporting format for raw materials

Table L.6 shows the reporting format completed for parts production.

|   | Part categories included<br>(see Note 1) | Part unit processes included (see Note 1) | Handling of special issues<br>(see Note 2) |  |  |  |
|---|--|---|--|--|--|--|
| B1.1.1 Batteries  |  |   |  |  |  |  |
| B1.1.2 Cables   |  |   |  |  |  |  |
| B1.1.3 Electro-mechanics  |  |   |  |  |  |  |
| B1.1.4 Integrated circuits (ICs)  |  |   |  |  |  |  |
| B1.1.5 Mechanics / materials  |  |   |  |  |  |  |
| B1.1.6 Displays   | Included (mainly based on IOA)           |   |  |  |  |  |
| B1.1.7 Printed circuit boards (PCBs)  |  |   |  |  |  |  |
| B1.1.8 Other PBA components   |  |   |  |  |  |  |
| B1.1.9 Packaging materials  |  |   |  |  |  |  |
| B1.1.10 Black box modules   |  |   |  |  |  |  |
| NOTE 1 – Annex E of [ITU-T L.1410] gives a l<br>NOTE 2 – Include description of data source and |  |   | pplicable.                                 |  |  |  |

## Table L.6 of ITU-T L.1410 – Reporting format for parts production

Table L.8 shows the reporting format completed for the end-of-life treatment (EoLT) stage.

|   | Process<br>categories included | Process unit<br>processes included | Handling of special issues |  |  |  |
|---|--------------------------------|------------------------------------|----------------------------|--|--|--|
| D1. Preparation for reuse of ICT goods  | Not included                   |                                    |                            |  |  |  |
| D2. ICT-specific EoLT   |                                |                                    |                            |  |  |  |
| D3. Other EoLT Mainly based on IOA  |                                |                                    |                            |  |  |  |
| NOTE – Annex F of [ITU-T L.1410] gives a list of process categories and unit processes which shall be included when applicable. |                                |                                    |                            |  |  |  |

Tables L.7 (Reporting format for use stage energy consumption), L.9 (Reporting format for LCI results), L.11 (Reporting format for network description), L.12 (Reporting format for network energy consumption) and L.13 (Reporting format for service hardware allocation) are not applicable because they come into conflict with industrial secrets.

Table L.10 of [ITU-T L.1410] (Impact category indicators) is not applicable because only CO<sub>2</sub> emission is considered in this case study.

# Appendix II

## Compliance with [ITU-T L.1410]

Table XII.1 as presented in Appendix XII of [ITU-T L.1410] has been completed from the viewpoint of the hybrid approach employed in this case study. Table numbering is that of [ITU-T L.1410].

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant  |
|-----------------------------|---|-----------|------------------|---|
| Introduction                | Deviation(s) from the requirements shall be clearly motivated and reported.   | Yes       |                  |   |
| 5.2                         | Full compliance with [ITU-T L.1410] can be claimed if all mandatory requirements are fulfilled.   |           | No               | Hybrid approach<br>allows for partial<br>compliance only  |
| 5.3                         | A third-party review is also needed if the comparison result is to be externally communicated.  | Yes       |                  |   |
| 5.3                         | In case of comparative assessment between ICT goods LCAs the operating lifetime shall be set to equal   |           |                  | Lifetime of each<br>device is set<br>according to<br>Statutory useful<br>lifetime in Japan<br>[b-Life, 2016]" |
| 6.1                         | The requirements of [ITU-T L.1410] shall apply<br>as well as those of [ISO 14040] and<br>[ISO 14044].   | Yes       |                  |   |
| 6.1.1                       | The following four high-level life cycle stages<br>[raw material acquisition (RMA), production<br>(P), use (U), EoLT] shall apply to ICT goods,<br>networks and services and shall be assessed as<br>applicable in LCAs based on [ITU-T L.1410] in<br>accordance with the goal and scope.   | Yes       |                  |   |
| 6.1.1                       | Table 2 of [ITU-T L.1410] defines the detailed<br>life cycle stages which further defines the<br>system boundary and which are to be considered<br>when assessing the life cycle impact of ICT<br>goods, networks and services. In particular, it is<br>important to cover all processes whose<br>relevance is marked as mandatory in that table. | Yes       |                  | Tables 1-2 and 1-3  |
| 6.1.1                       | The data collected shall be structured in such a<br>way that the GHG emissions and energy<br>consumption/environmental impact arising from<br>the transport processes could be reported<br>transparently as far as possible.  |           | No               | Not possible when<br>using IOA data   |
| 6.1                         | Transport and energy supplies shall be included<br>in all life cycle stages.  | Yes       |                  | Except final<br>distribution<br>(See clause 5.2.5)  |

Table XII.1 of ITU-T L.1410 – Summary of requirements of [ITU-T L.1410]

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant     |
|-----------------------------|--|-----------|------------------|--|
| 6.1                         | At the time of publication, to collect appropriate<br>data related to raw materials transport and to<br>separate data related to raw material acquisition<br>stage and production stage is considered<br>challenging due to LCA tool limitations, lack of<br>data, limitations in data granularity and the<br>nature of ICT supply chains.<br>Deviation(s) from this requirement shall be<br>clearly motivated and reported. | Yes       |                  | IOA based  |
| 6.1                         | Instances of transport of goods between<br>production and use stages shall be taken into<br>account.   | Yes       |                  | IOA based  |
| 6.1.2                       | The ICT goods, networks and services product<br>system to be assessed shall be clearly described<br>as well as relevant functions and characteristics.   | Yes       |                  |  |
| 6.1.2.1                     | For the ICT good under study, applicable types<br>of parts, as well as amounts of these, shall be<br>defined.  | Yes       |                  | IOA based  |
| 6.1.2.2                     | In the goal and scope phase it shall be outlined<br>which network building blocks are covered.   | Yes       |                  |  |
| 6.1.2.2                     | For the ICT network under study, applicable<br>types of nodes and infrastructure, as well as<br>amounts of these, shall be defined.  |           | No               | Conflict with industrial secrets                   |
| 6.1.2.3                     | For the ICT service under study, applicable<br>types of ICT network elements and<br>infrastructure, as well as amounts of these, shall<br>be defined.  |           | No               | Conflict with industrial secrets                   |
| 6.1.3.1                     | Software shall be considered as well as hardware.  | Yes       |                  | IOA based –<br>software included<br>to some extent |
| 6.1.3.1                     | For specific software applications, such as<br>music distribution applications, the software is<br>to be seen as an ICT service and shall be<br>assessed according to the requirements outlined<br>for services.   |           | No               | See Table1-3                                       |
| 6.1.3.1                     | In these cases the hardware needed to operate<br>the software shall be considered as well.   |           | No               | See Table1-3                                       |
| 6.1.3.1                     | For users of generic operating systems<br>embedded in products, the life cycle impact of<br>usage of this software may be considered as<br>negligible. However, for the developer of this<br>software the impact of the usage of this software<br>shall be taken into account.   |           | No               | See Table1-3                                       |
| 6.1.3                       | Operating lifetime is critical for the<br>interpretation of the results of LCAs and shall<br>therefore always be reported when presenting<br>LCA results.  | Yes       |                  | With some<br>exceptions                            |
| 6.1.3                       | Operating lifetime estimates and assumptions shall also be clearly described in the reporting.   | Yes       |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|---|-----------|------------------|--|
| 6.2.1                       | During the LCA scoping phase the building<br>blocks of the ICT goods, networks or services<br>shall be identified.  | Yes       |                  |  |
| 6.2.2.1                     | The functional unit shall be chosen in accordance with the goal and scope of the LCA.   | Yes       |                  |  |
| 6.2.2.1                     | The functional unit requires inclusion of the<br>relevant quantifiable properties and the<br>technical/functional performance of the system.<br>This means that the operating lifetime of all<br>included ICT goods shall be specified.                               | Yes       |                  |  |
| 6.2.2.1                     | The number of users/subscribers supported by<br>the network and the traffic profile shall be<br>included where applicable.  | Yes       |                  | With some exceptions                           |
| 6.2.2.1                     | The functional unit shall be clearly defined and measurable.  | Yes       |                  |  |
| 6.2.2.1                     | The reference flow shall reflect the functional unit chosen.  | Yes       |                  |  |
| 6.2.2.2                     | The functional unit shall be chosen in the context of goal and scope of the LCA and shall be further clarified by system boundary and cut-off rules.  | Yes       |                  |  |
| 6.2.2.2                     | To comply with [ITU-T L.1410], the following<br>functional unit shall be applied where<br>applicable.<br>Annual ICT goods use (per year of ICT good<br>use), or total ICT good use per lifetime of an<br>ICT good.  | Yes       |                  |  |
| 6.2.2.2                     | For relevant LCA results, realistic use scenarios shall be captured.  | Yes       |                  |  |
| 6.2.2.3                     | ICT networks can be seen as a system<br>composed of different types of ICT goods. For<br>the purposes of [ITU-T L.1410], the following<br>functional unit shall be applied where applicable<br>for ICT networks used during at least 1 year:<br>• annual network use. | Yes       |                  |  |
| 6.2.2.3                     | For relevant LCA results, realistic use scenarios shall be captured.  | Yes       |                  |  |
| 6.2.2.4                     | For the purposes of [ITU-T L.1410], the following functional unit shall be applied where applicable.<br>annual service use.   | Yes       |                  |  |
| 6.2.2.4                     | For relevant LCA results, realistic use scenarios shall be captured.  | Yes       |                  |  |
| 6.2.2.4                     | Corresponding realistic use scenarios shall be defined.   | Yes       |                  |  |
| 6.2.2.4                     | The annual service use shall be defined with<br>respect to the usage scenario to make it possible<br>to define the reference flow.  | Yes       |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled                  | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|---|----------------------------|------------------|--|
| 6.2.3.1                     | The selection of the system boundary shall be consistent with the goal of the study.  | Yes                        |                  |  |
| 6.2.3.1                     | Consequently, the system boundaries here<br>define the life cycle stages and the unit<br>processes that shall be taken into account in an<br>LCA of an ICT product system.  | Yes                        |                  |  |
| 6.2.3.1                     | Table 2 includes further details of the life cycle<br>stages to be included in LCAs of ICT goods,<br>networks and services. The different life cycle<br>stages are further described in clauses 6.2.3.4.2<br>to 6.2.3.4.5. "Mandatory" in Table 2 means that<br>the life cycle stage shall be included. | Yes                        |                  | IOA based                                      |
| 6.2.3.1                     | Mandatory life cycle stages or unit processes<br>shall not be cut-off before being considered for<br>inclusion by using alternative data.   | Yes                        |                  | IOA based                                      |
| 6.2.3.1                     | In Table 2 "mandatory" means that the life cycle stage, if applicable to the studied product system, shall always be taken into account in an LCA for ICT.  | Yes                        |                  |  |
| 6.2.3.3.1                   | In order to set the system boundary of ICT goods the life cycle stages listed in clause 6.1.1 shall be detailed.  | Yes                        |                  | IOA based                                      |
| 6.2.3.3.1                   | As stated in clause 6.1.3, the environmental impact from both hardware and software shall be considered, if applicable.   | Yes                        |                  |  |
| 6.2.3.3.1                   | For the ICT good under study, applicable types<br>of parts, as well as amounts of these, shall be<br>defined.   | Not<br>applicabl<br>e (NA) |                  | IOA based                                      |
| 6.2.3.3.2                   | Table H.1 provides a mandatory set of raw materials (both ICT-specific and generic) which shall be included in the LCA of ICT goods.  | NA                         |                  | IOA based                                      |
| 6.2.3.3.3                   | Annex E lists a mandatory set of parts to be<br>included where applicable to the studied ICT<br>product system, when performing an LCA of<br>ICT goods, as well as mandatory part unit<br>processes which shall be included for each part.  | NA                         |                  | IOA based                                      |
| 6.2.3.3.3                   | As an example, if batteries are part of the<br>studied ICT goods product system they shall be<br>included within the system boundary and for<br>every battery the Battery Cell manufacturing<br>and Battery module manufacturing shall be<br>included.  | Yes                        |                  |  |
| 6.2.3.3.3                   | Assembly (B1.2) shall include as minimum<br>PCBA module assembly, final assembly,<br>warehousing, and packaging.  | Yes                        |                  | IOA based                                      |
| 6.2.3.3.3                   | In case support goods are part of the studied product system, support goods Production (B2) is mandatory.   | Yes                        |                  | With some<br>exceptions,<br>IOA based          |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant                  |
|-----------------------------|--|-----------|------------------|---|
| 6.2.3.3.3                   | Support goods (B2.1) which shall be included if<br>applicable to the studied product system are at<br>least air conditioners, cables, and power supply<br>systems.   | Yes       |                  | With some<br>exceptions,<br>IOA based                           |
| 6.2.3.3.3                   | As stated in Table 2, construction of<br>ICT-specific site (B3) is mandatory if the<br>ICT-specific site is included in the studied<br>product system.   | Yes       |                  |   |
| 6.2.3.3.3                   | Site building blocks to be included in B3.1, if<br>they are applicable to the studied product<br>system, are antenna towers, fences and shelters.  | Yes       |                  |   |
| 6.2.3.3.4                   | Raw material acquisition and Production for the additional PCBAs used during the operating lifetime of the ICT goods are mandatory.  | Yes       |                  | IOA based   |
| 6.2.3.3.5                   | As shown in Figure 11, Preparation of ICT goods for reuse of ICT goods (D1), ICT-specific EoLT (D2) and Other EoLT (D3) are within the mandatory system boundary for EoLT.   | Yes       |                  | IOA based   |
| 6.2.3.3.5                   | Annex F lists a mandatory set of EoLT<br>processes to be included where applicable when<br>performing an LCA of ICT goods which<br>includes the EoLT stage.  | Yes       |                  | IOA based   |
| 6.2.3.3.5                   | It is thus recognized that compliance with all<br>requirements in Annex F may not be possible at<br>the time [ITU-T L.1410] is published.<br>Deviation(s) from the requirements shall be<br>clearly motivated and reported.  | Yes       |                  |   |
| 6.2.3.4                     | The network shall be defined in terms of ICT goods, Support goods and ICT infrastructure (e.g., cables duct).  | Yes       |                  | Not described in detail, conflict with industrial secrets       |
| 6.2.3.4                     | For each included product types, the number of<br>units shall be defined as well as their<br>corresponding lifetimes.  | Yes       |                  | not described in<br>detail, conflict with<br>industrial secrets |
| 6.2.3.4                     | For the assessment of networks, operator activities shall always be included.  |           | No               | See Table 1-3   |
| 6.2.3.5.1                   | In addition to the use of ICT goods and<br>networks, an ICT service may also have<br>additional impacts associated with application<br>software development, use of consumables,<br>infrastructure for sales and logistics, associated<br>travel and transport (in addition to those already<br>included for the ICT goods and networks) which<br>shall also be included as appropriate. | Yes       |                  | Some exceptions<br>such as application<br>Software              |
| 6.2.3.5.1                   | The impact of the data centres where the service is operated shall be assessed.  | Yes       |                  |   |
| 6.2.3.5.1                   | The data centre shall be studied and assessed in the same way as other ICT goods.  | Yes       |                  |   |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|--|-----------|------------------|--|
| 6.2.3.5.1                   | The system boundary of the ICT services<br>provided by the ICT network shall be<br>established based on either the actual use<br>scenario of the ICT services, if available, or on<br>an estimated use scenario,   | Yes       |                  | By customer<br>questionnaire                   |
| 6.2.3.5.2                   | Energy consumption, material inputs and<br>environmental releases shall be assessed in<br>accordance with the system boundary.   | Yes       |                  |  |
| 6.2.4                       | Cut-offs shall be avoided as far as possible.  | Yes       |                  |  |
| 6.2.4                       | The recommendations of clause 4.2.3.3 of [ISO 14044] shall be used as closely as possible.   | Yes       |                  |  |
| 6.2.4                       | All cut-off criteria stated by [ISO 14040] and<br>[ISO 14044] are to be considered before cut-off<br>of a certain process – and the process shall be<br>included if significant to at least one criterion.   | Yes       |                  | Not possible to<br>analyse fully for<br>IOA    |
| 6.2.4                       | The intention of the [ITU-T L.1410] is to<br>include all mandatory activities of Table 2.<br>If these activities are not included, such cut-offs<br>shall be clearly motivated.  | Yes       |                  | IOA based                                      |
| 6.2.4                       | Any cut-off made shall be clearly described and documented.  | Yes       |                  |  |
| 6.2.5.1                     | <ul> <li>A qualitative description of the data quality and<br/>any efforts taken to improve it shall be disclosed<br/>while considering the following data quality<br/>indicators: <ul> <li>Methodological appropriateness and<br/>consistency</li> <li>Completeness (total LCA level)</li> <li>Uncertainty</li> <li>Data representativeness</li> <li>Data age (timeliness)</li> <li>Acquisition method</li> <li>Supplier independence</li> <li>Geographical correlation</li> <li>Technological correlation</li> <li>Cut-off rules (rules of inclusion/exclusion)</li> </ul> </li> <li>In selecting emission factors for use in</li> </ul> | Yes       |                  | To extent possible<br>for IOA approach         |
| 6.2.5.1                     | In selecting emission factors for use in<br>calculating GHG emissions under this<br>methodology, the following guidance shall be<br>followed: emission factors used should be the<br>most up to date from publicly available sources.  | Yes       |                  |  |
| 6.2.5.1                     | Where emission factors are sourced from non-<br>public sources, or are not the most up-to-date<br>ones, a justification for their use shall be<br>provided.  | Yes       |                  |  |
| 6.2.5.1                     | The specific global warming potential (GWP)<br>values used shall be those taken from the latest<br>United Nations Intergovernmental Panel on<br>Climate Change (UN IPCC) reports.<br>For further guidance, see Table XI.1.   | NA        |                  | IOA based<br>(CO <sub>2</sub> only)            |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled        | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|--|------------------|------------------|--|
| 6.2.5.2                     | In general, data age and technology are<br>especially important in LCAs for ICT goods,<br>networks and services due to the fast technology<br>evolution and the growth in network traffic<br>e.g., for data traffic, up-to-date figures shall<br>always be used.   | Yes              |                  |  |
| 6.2.5.2                     | For support activities (e.g., ICT manufacturer<br>support activities and operator support<br>activities), primary data shall be used for all<br>individual processes under the financial or<br>operational control of the organization<br>undertaking the LCA  | NA               |                  | IOA based                                      |
| 6.2.5.2                     | and data shall be representative of the processes for which they are collected.  | Yes              |                  | IOA based                                      |
| 6.3.1.1                     | Data shall be collected for each unit process that<br>is included within the system boundary in<br>accordance with Annex B.  | Yes              |                  | IOA based                                      |
| 6.3.1.1                     | Data shall be collected for all mandatory processes outlined in Table 2.   | Yes              |                  | IOA based                                      |
| 6.3.1.1                     | When data has been collected from public sources, the source shall be referenced.  | Yes              |                  |  |
| 6.3.1.2                     | Data shall be collected at least for the processes<br>marked with mandatory in Table 2, unless these<br>are found negligible in accordance with the<br>cut-off rules.  | Yes              |                  | IOA based                                      |
| 6.3.1.2.1                   | It should be noted that, for many products<br>(especially end-user goods), periods of idling<br>and power off may be significant and are<br>important to consider when modelling the traffic<br>profile/ model the usage profile and shall be<br>included if applicable.   | Partially<br>Yes |                  |  |
| 6.3.1.4                     | Use time, goods type, data traffic and network<br>access type give important statistical data that<br>needs to be collected in order to quantify the use<br>of ICT systems.  | Yes              |                  |  |
| 6.3.1.2.3                   | When calculating the potential environmental<br>impact the LCA practitioner is encouraged to<br>use the most accurate data for the energy mix<br>that is applicable to the ICT goods under<br>assessment.<br>Particularly the use stage shall use the<br>applicable electricity mix to calculate the<br>potential environmental impact from the use<br>stage more exactly. | Yes              |                  |  |
| 6.3.2.1                     | The general requirements for data calculations<br>in [ISO 14040] and [ISO 14044] shall be<br>applied.  | Yes              |                  |  |
| 6.3.2.1                     | All calculation procedures shall be explicitly documented and the assumptions made shall be clearly stated and explained.  | Yes              |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|--|-----------|------------------|--|
| 6.3.2.1                     | The same calculation procedures shall be consistently applied throughout the study.  | Yes       |                  |  |
| 6.3.2.1                     | A check on data validity shall be conducted<br>during the process of data collection to confirm<br>that the data quality requirements for the<br>intended application have been fulfilled.     | Yes       |                  |  |
| 6.3.2.3                     | The evaluation of the environmental load shall<br>consider both a fixed part which is independent<br>of the usage and a variable part which correlates<br>to the usage.                        | Yes       |                  |  |
| 6.3.3.1                     | The same allocation method shall be used for all<br>environmental loads for all products from a<br>common process.   | Yes       |                  |  |
| 6.3.3.1                     | The study shall identify the processes shared<br>with other product systems and deal with them<br>according to the stepwise procedure presented<br>below.                                      | Yes       |                  |  |
| 6.3.3.2                     | Data for generic processes (G1 to G7) shall be<br>allocated as a whole (i.e., for the full life cycle<br>for the generic process) to the associated life<br>cycle stage of the product system. | Yes       |                  |  |
| 6.3.3.2                     | However, all Raw material acquisition (G5) shall be allocated to the life cycle stage Raw material acquisition (A).  |           |                  | IOA based<br>(RMA and P are<br>combined)       |
| 6.3.3.3                     | Data for relevant part of the organization/operation shall be allocated to the relevant part of the project/product system life cycle.   | NA        |                  | IOA based                                      |
| 6.3.3.3                     | If no detailed information on<br>organization/operation is available, the<br>allocation shall be based on<br>organizational/economic data.   | NA        |                  | IOA based                                      |
| 6.3.3.8                     | End-user goods (e.g., PCs, smart phones) that<br>access more than one ICT network (e.g., 3G,<br>WLAN) shall be allocated to these ICT<br>networks based on use time.                           |           | No               |  |
| 6.3.3.8                     | The assumptions regarding use time for access<br>to different ICT networks and off line work<br>shall be described and motivated.  | Yes       |                  | Based on customer questionnaire                |
| 6.3.3.8                     | Impact from shared network resources<br>(e.g., transmission goods, core nodes and data<br>centres) shall be allocated to an access network-<br>based on data traffic.                          | Yes       |                  |  |
| 6.3.3.8                     | The assumptions regarding data traffic shall be described and motivated.   | Yes       |                  | Based on customer questionnaire                |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|---|-----------|------------------|--|
| 6.3.3.9                     | The impact from each ICT network supporting<br>the service should be allocated to the service<br>based on access use time or data traffic.<br>More specifically, the following allocation<br>principle of ICT network data to an ICT service<br>shall be used:<br>Data for end-user goods: to be allocated based<br>on active use time of the ICT service. etc. | Yes       |                  |  |
| 6.3.3.9                     | Data traffic is also preferred for e.g., mobile<br>access networks as mobile access networks<br>show a large dependency between data traffic<br>and energy consumption and need a traffic<br>model that takes data traffic into account   | Yes       |                  |  |
| 6.3.3.9                     | Data for data centres and service provider<br>activities:<br>The data centre(s) where the ICT service is<br>operated as well as the service provider<br>activities shall be allocated based on number of<br>subscriptions and service users or amount of<br>data/transactions.  | Yes       |                  |  |
| 7                           | ISO states that the selection of impact categories<br>shall reflect a comprehensive set of<br>environmental issues related to the product<br>system being studied, taking the goal and scope<br>into consideration.   | Yes       |                  |  |
| 7                           | In the LCA it shall be ensured that the inventory<br>elementary flows (see Annex G are correctly<br>linked with appropriate life cycle impact<br>assessment (LCIA) characterization factors.  | Yes       |                  | IOA based                                      |
| 7                           | For climate change, the most recent global<br>warming characterization factors from the IPCC<br>for each GHG shall be used and the timeframe<br>should be 100 years.  | NA        |                  | CO <sub>2</sub> only                           |
| 7                           | The midpoint category Climate change is mandatory.  | Yes       |                  |  |
| 7                           | For other impact categories, there is no<br>methodological consensus in the LCA<br>community, thus the practitioner shall decide<br>which impact categories to consider and how to<br>calculate them, based on the studied ICT<br>product system and purpose of the LCA study.  | NA        |                  |  |
| 7                           | All impact categories and category indicators included shall be disclosed (Table L.10) and justified.   | Yes       |                  |  |
| 8.2                         | The sources of uncertainty and methodological choices made shall be assessed and disclosed.   | Yes       |                  |  |
| 8.3                         | The results of the life cycle impact (LCI) or<br>LCIA phases shall be interpreted according to<br>the goal and scope of the study.  | Yes       |                  |  |
| 8.3                         | The interpretation shall include a sensitivity check of the significant inputs, outputs and   | Yes       | No               |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|--|-----------|------------------|--|
|                             | methodological choices, as well as defined use<br>scenarios, in order to understand the uncertainty<br>of the results.   |           |                  |  |
| 9.1                         | The reporting of ICT product systems shall<br>fulfil the reporting rules as defined by<br>[ISO 14040] and [ISO 14044].   | Yes       |                  |  |
| 9.1                         | In the case of reporting, a public GHG inventory<br>report, the key accounting principles (relevance,<br>accuracy, completeness, consistency, and<br>transparency) shall be met.   | Yes       |                  |  |
| 9.1                         | <ul> <li>In addition to the reporting obligations outlined<br/>by [ISO 14040] and [ISO 14044], the report<br/>shall include the following information: <ul> <li>contact information</li> <li>studied goods, networks and services<br/>product system name and description</li> <li>type of inventory (i.e., final product cradle-<br/>to-grave or intermediate product cradle-to-<br/>gate inventory)</li> <li>goals of the study.</li> </ul> </li> <li>The reporting of results shall include: <ul> <li>total GHG emissions reported as amount of<br/>CO<sub>2</sub>e per functional unit for ICT good,<br/>network and service that have been assessed</li> <li>percentage for each life cycle stage<br/>contributing to the total results</li> <li>electricity (with use stage separated from the<br/>other stages)</li> <li>primary energy<sup>1</sup></li> <li>fuels</li> <li>value and sources of emission factors for<br/>CO<sub>2</sub> and CO<sub>2</sub>e, and GWP metric used in the<br/>report</li> <li>other data, justifications and explanations as<br/>stated throughout this report.</li> </ul> </li> </ul> | Yes       |                  |  |
| 9.1                         | In addition, the rules outlined in this clause and<br>what is stated in Annex L shall be followed for<br>reporting of studies claiming compliance with<br>[ITU-T L.1410].  | Yes       |                  |  |
| 9.1                         | The report shall contain a compliance statement<br>saying either that the LCA fully complies with<br>[ITU-T L.1410] (in case of full compliance) or<br>that the LCA partially complies with [ITU-<br>T L.1410] with the exceptions transparently<br>listed and justified (partial compliance).   | Yes       |                  |  |

<sup>&</sup>lt;sup>1</sup> Note that primary energy and electricity cannot be summarized because electricity contributes to the total primary energy.

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|---|-----------|------------------|--|
| 9.1                         | The extent to which support activities and other<br>optional/recommended activities are excluded<br>for different parts of the life cycle shall be<br>clearly described and for recommendations also<br>motivated in the study report.  | Yes       |                  |  |
| 9.1                         | For each product system (including ICT goods,<br>networks and services) the following aspects,<br>being of special importance to ICT applications,<br>shall be transparently motivated and described<br>in accordance with the principles defined in this<br>clause: Operating lifetime: All lifetime<br>assumptions shall be stated and motivated. | Yes       |                  |  |
| 9.1                         | Cut-off: Any cut-off made shall be clearly stated and motivated.  | Yes       |                  |  |
| 9.1                         | Allocations: Basis for allocations made shall be<br>described, especially for recycling, use of<br>recycled materials, distribution of facility data<br>and support activities.   | NA        |                  |  |
| 9.1                         | Data sources: Data sources<br>(i.e., specific/generic) shall be clearly stated,<br>and deviations from Table 2 shall be motivated.  | Yes       |                  |  |
| 9.1                         | For each product system (including ICT goods,<br>networks and services) an additional diagram<br>shall be presented whenever optional activities<br>in Table 2 have been included.  | NA        |                  |  |
| 9.1                         | The emission factors used shall be clearly<br>stated. The source used and the year they<br>represent shall be clearly stated.   | Yes       |                  |  |
| 9.1                         | In the case of emission factors for grid<br>electricity, the source, year and location<br>(specific, country, global average) shall be<br>clearly stated.   | Yes       |                  |  |
| 9.1                         | Where emission factors are sourced from non-<br>public sources, or are not the most up-to-date<br>ones, a justification for their use shall be<br>provided.   | Yes       |                  |  |
| 9.2.1                       | For each impact category studied, diagrams<br>corresponding to Figures 14a and 14b shall be<br>reported for the corresponding category<br>indicator result.   | Yes       |                  |  |
| 9.2.1                       | Due to the importance of operating lifetime to<br>results, information regarding this shall always<br>be present in the diagram, together with some<br>other basic modelling statements including total<br>result for the indicator, LCA study year<br>operating lifetime, etc. as shown below.   | Yes       |                  |  |
| 9.2.1                       | Figure 14b shall be presented whenever optional activities/processes from Table 2 have been included in the studied product system.   | Yes       |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|--|-----------|------------------|--|
| 9.2.1                       | For transport, the total result including all transport throughout the life cycle (Table L.4) shall be stated in the immediate proximity of the diagram (Figures 14a and 14b).   | Yes       |                  |  |
| 9.2.1                       | If used data sets do not report transport<br>separately any missing transport shall be listed<br>and motivated.  | Yes       |                  |  |
| 9.2.1                       | Figure 16 shall be accompanied by the disclaimer "This LCA result cannot be compared to the result of another LCA unless all assumptions and modelling choices are equal".   | Yes       |                  |  |
| 9.2.1                       | A diagram summarizing distribution of selected<br>environmental impact category indicators<br>between life cycle stages shall be prepared<br>together with absolute figures as shown in Table<br>L.10.                       | No        |                  | CO <sub>2</sub> only                           |
| 9.2.1                       | Figure 18 shall be accompanied by the<br>disclaimer "This LCA result cannot be<br>compared to the result of another LCA unless<br>all assumptions and modelling choices are<br>equal". See further explanation in the scope. |           | No               | Conflict with industrial secrets               |
| 9.2.2.1                     | Any deviation from Table 2 and clause 6.2.3 with respect to mandatory life cycle stages/unit processes shall be clearly stated and motivated.  | Yes       |                  |  |
| 9.2.2.1                     | Additionally, inclusion of generic processes for<br>the different life cycle stages shall be clearly<br>stated and reported.   | Yes       |                  | IOA based                                      |
| 9.2.2.1                     | Deviations for Generic processes shall be reported according to Table L.3.   | Yes       |                  | IOA based                                      |
| 9.2.2.2                     | The use of raw materials shall be transparently reported as outlined below.  | Yes       |                  | IOA based                                      |
| 9.2.2.2                     | The most important metals from recycling point<br>of view shall always be included.<br>For an appropriate reporting format refer to<br>Table L.5.  | Yes       |                  |  |
| 9.2.2.2                     | Deviation(s) from the requirements shall be clearly motivated and reported.  | Yes       |                  |  |
| 9.2.2.3.1                   | Compliance with Table E.1 shall be reported<br>and any deviation shall be described and<br>motivated. For an appropriate reporting format<br>refer to Table L.6.   | Yes       |                  |  |
| 9.2.2.4.1                   | Compliance with Table E.1 shall be reported<br>and any deviation shall be described and<br>motivated. For an appropriate reporting format<br>refer to Table L.6.   | Yes       |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant                  |
|-----------------------------|---|-----------|------------------|---|
| 9.2.2.4.1                   | The model of distribution over time of different<br>usage modes including power off and idle and<br>the rationale for those shall be transparently<br>reported. For an appropriate reporting format<br>refer to Table L.7.  | NA        |                  |   |
| 9.2.2.4.2                   | The rationale for the energy consumption values<br>for the support goods use shall be transparently<br>described and motivated. For an appropriate<br>reporting format refer to Table L.7.  | Yes       |                  |   |
| 9.2.2.5                     | If EoLT is included, any deviations from Annex<br>F shall be transparently reported and motivated.<br>For an appropriate reporting format refer to<br>Table L.3.  | Yes       |                  |   |
| 9.2.3                       | For LCI the following items shall be reported transparently: total use of primary energy and electricity.   | Yes       |                  |   |
| 9.2.3                       | Additionally, results for elementary flows<br>according to Table G.1 could be transparently<br>reported on an optional basis. If such reporting<br>is not made it is mandatory to describe<br>unexpected results, lack of data, and other<br>findings associated with the elementary flows. | NA        |                  |   |
| 9.3.1                       | Operating lifetime is important also for<br>networks, but is associated with the lifetime of<br>the different nodes, which shall be reported.   | Yes       |                  | Not described in<br>detail, conflict with<br>industrial secrets |
| 9.3.1                       | It shall be reported following the format of<br>Annex L (Table L.11) which also describes the<br>studied network.   |           | No               | Conflict with industrial secrets                                |
| 9.3.1                       | Figure 18 shall be accompanied by the disclaimer "This LCA result cannot be compared to the result of another LCA unless all assumptions and modelling choices are equal".  |           | No               | Conflict with industrial secrets                                |
| 9.3.1                       | Additionally, a diagram summarizing<br>distribution of environmental impact category<br>indicators between life cycle stages shall be<br>prepared together with absolute figures as<br>shown in the Annex L (Table L.10).   | No        |                  | CO <sub>2</sub> only  |
| 9.3.1                       | Figure 19 shall be accompanied by the disclaimer "This LCA result cannot be compared to the result of another LCA unless all assumptions and modelling choices are equal".  | NA        |                  |   |
| 9.3.1                       | Details of network energy consumption shall be<br>reported with a split of different elements of the<br>network. An example of Table for Reporting is<br>provided in Table L.12.  |           | No               | Conflict with industrial secrets                                |
| 9.4.1                       | Operating lifetime is important also for services,<br>but it is associated with the lifetime of the<br>different nodes, which shall be reported.  |           | No               | Conflict with industrial secrets                                |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|---|-----------|------------------|--|
| 9.4.1                       | Allocation of network data to the service shall be reported. It should be reported according to Table L.13 .  |           | No               | Conflict with industrial secrets               |
| 9.4.1                       | Additionally, a diagram summarizing<br>distribution of impact category indicators<br>between life cycle stages for the service product<br>system under study shall be presented together<br>with absolute figures as shown in Table L.10.                     | No        |                  | CO <sub>2</sub> only                           |
| 9.4.1                       | Figure 22 shall be accompanied by the disclaimer "This LCA result cannot be compared to the result of another LCA unless all assumptions and modelling choices are equal".  |           | No               | Conflict with industrial secrets               |
| 10                          | Any critical review shall be performed according to the requirements of [ISO 14040], [ISO 14044] and [ITU-T L.1410].  | Yes       |                  |  |
| 10                          | The scope and type of critical review desired<br>shall be defined in accordance with clauses<br>4.2.3.8 and 6 of [ISO 14044].   | Yes       |                  |  |
| 11.1                        | Infrastructure, e.g., highways for transportation,<br>is generally assumed to exist independently of<br>introduction of new services and shall be<br>excluded.  | NA        |                  |  |
| 11.1                        | The handling of time perspective and scale shall be disclosed and motivated in the report.  | Yes       |                  |  |
| 11.1                        | To be able to quantify the net environmental<br>impact when introducing an ICT based service<br>the environmental impact of both the ICT<br>service itself and of the reference product<br>system need to/shall be assessed from a life<br>cycle perspective. | Yes       |                  |  |
| 11.1                        | To make sure that the comparative assessment<br>gives a relevant result, the full life cycle of both<br>systems shall always be considered  | Yes       |                  |  |
| 11.1                        | From an LCA perspective the reference product<br>system and the ICT service based system shall<br>mimic each other as far as possible   | Yes       |                  |  |
| 11.1                        | and the practitioner shall model both systems in an unbiased way.   | Yes       |                  |  |
| 11.2                        | Goods shall be compared with other goods  | Yes       |                  |  |
| 11.2                        | ICT networks shall be compared between themselves.  | Yes       |                  |  |
| 11.2                        | ICT services shall be compared between themselves.  | Yes       |                  |  |
| 11.3.1                      | In this comparative LCA study, the scope of the LCA study shall be defined in such a way that the two systems can be compared.  | Yes       |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|--|-----------|------------------|--|
| 11.3.1                      | Systems shall be compared using the same<br>functional unit and equivalent methodological<br>considerations, such as performance, system<br>boundary, data quality, allocation procedures<br>and cut-off rules.      | Yes       |                  |  |
| 11.3.1                      | Any differences between systems regarding<br>these parameters shall be identified and<br>reported.   | Yes       |                  |  |
| 11.3.2                      | Also in this case, the scope of the LCA study<br>shall be defined in such a way that the two<br>systems can be compared.   | Yes       |                  |  |
| 11.3.2                      | Both systems shall be assessed using the same<br>functional unit and equivalent methodological<br>considerations, such as performance, system<br>boundary, data quality, allocation procedures<br>and cut-off rules. | Yes       |                  |  |
| 11.3.2                      | Any differences between systems regarding<br>these parameters shall be identified and<br>reported.   | Yes       |                  |  |
| 11.3.3                      | The assessment of the ICT based system shall<br>be performed in accordance with Part I.  | Yes       |                  |  |
| 11.3.3                      | When making comparisons, it is important to<br>keep in mind that the functional unit used shall<br>be applicable to both the reference product<br>system and the system of ICT goods, networks<br>and services.      | Yes       |                  |  |
| 11.3.3                      | For the reference product system, applicable<br>requirements in [ITU-T L.1410] shall be<br>applied, e.g., requirements regarding data<br>quality and cut-off.  | Yes       |                  |  |
| 12.2                        | All the requirements stipulated in Part I for a system boundary definition shall be applied.   | Yes       |                  |  |
| 12.2.1                      | The functional unit shall take into account the general rules outlined in Part I, clause 6.2.2 "Functional unit" and clause 4.2.3.2 of [ISO 14044].  | Yes       |                  |  |
| 12.2.1                      | Additionally, the functional unit shall be defined<br>so that it is applicable both to the ICT goods,<br>networks and services product system and the<br>reference product system.                                   | Yes       |                  |  |
| 12.2.1                      | The reference flow shall be defined to quantify the functional unit.   | Yes       |                  |  |
| 12.2.1                      | In other words, for the functional unit of one<br>meeting, for instance, the reference flow for the<br>systems of ICT goods, networks and services<br>and the reference product system shall be<br>defined.          | Yes       |                  |  |
| 12.2.2                      | Two different system boundaries shall be defined which are applicable for the ICT goods,   | Yes       |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]   | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|---|-----------|------------------|--|
|                             | networks and services product system and for<br>the reference product systems, respectively.  |           |                  |  |
| 12.2.2                      | Considerations shall be made to which<br>electricity is used when assessing the<br>environmental impact of the ICT goods,<br>networks and services product system, and the<br>reference product systems.  | Yes       |                  |  |
| 12.3                        | The calculation for the inventory analysis shall<br>be performed in accordance with Part I,<br>clause 6.3.  | Yes       |                  |  |
| 12.4                        | The calculation for the inventory analysis shall<br>be performed in accordance with Part I,<br>clause 6.3.  | Yes       |                  |  |
| 13                          | Any cut-off made during a study shall be clearly<br>stated in the study report, e.g., the exclusion of<br>life cycle processes which are considered<br>insignificant should be justified.   | Yes       |                  |  |
| Annex B                     | A mandatory list of generic activities<br>(unit processes) that have been found to be of<br>importance for LCA of ICT goods, networks<br>and services can be found in Annex D.  | NA        |                  | IOA based                                      |
| Annex B                     | <ul> <li>The following emissions shall be taken into account if applicable to the studied impact category(ies):</li> <li>emissions to air;</li> <li>emissions to water;</li> <li>emissions to soil.</li> </ul>  | NA        |                  |  |
| Annex B                     | <ul> <li>The following resource objects shall be taken into account if applicable to the studied impact category(ies):</li> <li>material resource use (or material depletion);</li> <li>energy resource use (or energy resources depletion).</li> </ul> | NA        |                  | IOA based                                      |
| Annex B                     | A list of emissions and resource objects that<br>shall be included, if applicable to the studied<br>product system and impact category(ies), can be<br>found in Table G.1.  | NA        |                  |  |

| Clause in<br>[ITU-T L.1410] | Requirement of [ITU-T L.1410]  | Fulfilled | Not<br>fulfilled | Explanation/<br>motivation if not<br>compliant |
|-----------------------------|--|-----------|------------------|--|
| Annex B                     | <ul> <li>Furthermore, the following inputs shall also be included if applicable to the studied impact category(ies):</li> <li>electricity;</li> <li>other forms of delivered energy (district heating and cooling);</li> <li>fuels (typically indicates the fuels are incinerated on-facility or in a vehicle connected to the facility);</li> <li>primary products (products that are part of the final product in operation);</li> <li>secondary products (products that are not part of the final product in operation);</li> <li>transport, travel, and other services (can be seen as a special non-material secondary product input).</li> </ul> | Yes       |                  | IOA based                                      |
| Annex B                     | <ul> <li>Finally, the following flows shall also be included if applicable to the studied impact category(ies):</li> <li>water discharge (to municipal sewage or recipient);</li> <li>waste fractions (residual waste fractions or waste fractions that need further treatment, also including material recycling and energy recovery);</li> <li>product output (the main purpose with the unit process or activity).</li> </ul>   | NA        |                  |  |
| Annex C                     | Any support activities included in the LCA<br>scope shall be clearly reported in terms of<br>organization activities considered.   | No        |                  |  |
| Annex C                     | G7Other material shall be considered   | NA        |                  |  |
| Annex E                     | Table E.1 lists the applicable parts and assembly<br>types which shall be taken into account when<br>performing an LCA of ICT goods, if applicable<br>to the ICT good (not ICT network). It also lists<br>the corresponding part and assembly categories<br>and unit processes.  | Yes       |                  | IOA based                                      |
| Annex G                     | Table G.1 contains elementary flows which<br>shall be taken into account in LCA analyses for<br>ICT.   | Yes       |                  | IOA based                                      |
| Annex G                     | The substance names listed in Table G.1 shall be used in the report.   | NA        |                  |  |
| Annex G                     | Deviation(s) from the requirements shall be clearly motivated and reported.  | Yes       |                  |  |
| Annex H                     | Table H.1 lists the minimum raw materials<br>groups (chemicals, fuels, metals, plastics,<br>packaging materials and additives) that shall be<br>taken into account in LCAs of ICT goods, if<br>applicable to the studied ICT product system.   | Yes       |                  | IOA based                                      |

|  | Numb  | er of target scenarios: 28            | Number | of reference scenarios: 121             |

#### **III.2** Questionnaire 2

As an example, the questionnaire result for the target scenario "music" follows.

(1) User ratio of each target scenario

Q: What kind of service do you usually use?

A:

| FunctionTarget  |    | scenario | User ratio [%] |
|-----------------|----|----------|----------------|
| Listen to music | t3 | Music    | 41.7           |

#### Q: What is an alternative way that you listen to music with your mobile phone?

A:

| Function           | Reference scenarios |                           | User ratio [%] |
|--------------------|---------------------|---------------------------|----------------|
|                    | r3.1                | Purchase CD               | 23             |
| <b>T</b> • 4 • • • | r3.2                | Rent CD                   | 54             |
| Listen to music    | r3.3                | Watch TV, listen to radio | 12             |
|                    | r3.4                | Do nothing                | 11             |

#### (2) Use frequency

Q: How often do you use mobile phone music services?

| ۸            |   |
|--------------|---|
|              |   |
| $\mathbf{n}$ | • |
|              |   |

|                                    | More than 5<br>times a day | 2 – 4 times<br>a day | Once a day | Once a week | Less than once a month | Do<br>nothing |
|------------------------------------|----------------------------|----------------------|------------|-------------|------------------------|---------------|
| Number of<br>selectors<br>[person] | 6                          | 14                   | 34         | 86          | 347                    | 682           |

#### (3) Time of use

Q: How long do you use the service per use?

A:

|                                    | More than<br>1 hour | 30 min –<br>1 hour | 10 – 30 min | 5 – 10 min | 1 – 5 min | Less than<br>1 min |
|------------------------------------|---------------------|--------------------|-------------|------------|-----------|--------------------|
| Number of<br>selectors<br>[person] | 40                  | 50                 | 109         | 114        | 110       | 64                 |

(4) Means of transportation to store and distance

Q: What is your means of transportation to the store? What is the distance to the store?

A:

|               | On foot, bicycle | Motorcycle | Automobile | Bus  | Railway |
|---------------|------------------|------------|------------|------|---------|
| Distance [km] | 4.49             | 1.06       | 15.00      | 4.46 | 18.85   |

#### SERIES OF ITU-T RECOMMENDATIONS

Series A Organization of the work of ITU-T

- Series D Tariff and accounting principles and international telecommunication/ICT economic and policy issues
- Series E Overall network operation, telephone service, service operation and human factors
- Series F Non-telephone telecommunication services
- Series G Transmission systems and media, digital systems and networks
- Series H Audiovisual and multimedia systems
- Series I Integrated services digital network
- Series J Cable networks and transmission of television, sound programme and other multimedia signals
- Series K Protection against interference

Series L Environment and ICTs, climate change, e-waste, energy efficiency; construction, installation and protection of cables and other elements of outside plant

- Series M Telecommunication management, including TMN and network maintenance
- Series N Maintenance: international sound programme and television transmission circuits
- Series O Specifications of measuring equipment
- Series P Telephone transmission quality, telephone installations, local line networks
- Series Q Switching and signalling, and associated measurements and tests
- Series R Telegraph transmission
- Series S Telegraph services terminal equipment
- Series T Terminals for telematic services
- Series U Telegraph switching
- Series V Data communication over the telephone network
- Series X Data networks, open system communications and security
- Series Y Global information infrastructure, Internet protocol aspects, next-generation networks, Internet of Things and smart cities
- Series Z Languages and general software aspects for telecommunication systems
