TELECOMMUNICATION
STANDARDIZATION SECTOR
OF ITU

M.3017

Amendment 1
(04/2005)

SERIES M: TELECOMMUNICATION MANAGEMENT,
INCLUDING TMN AND NETWORK MAINTENANCE

Telecommunications management network

Framework for the integrated management of hybrid
circuit/packet networks

Amendment 1: Additional options

ITU-T Recommendation M.3017 (2003) – Amendment 1

ITU-T M-SERIES RECOMMENDATIONS
TELECOMMUNICATION MANAGEMENT, INCLUDING TMN AND NETWORK MAINTENANCE

Introduction and general principles of maintenance and maintenance organization	M.10–M.299
International transmission systems	M.300–M.559
International telephone circuits	M.560–M.759
Common channel signalling systems	M.760–M.799
International telegraph systems and phototelegraph transmission	M.800–M.899
International leased group and supergroup links	M.900–M.999
International leased circuits	M.1000–M.1099
Mobile telecommunication systems and services	M.1100–M.1199
International public telephone network	M.1200–M.1299
International data transmission systems	M.1300–M.1399
Designations and information exchange	M.1400–M.1999
International transport network	M.2000–M.2999
Telecommunications management network	M.3000–M.3599
Integrated services digital networks	M.3600–M.3999
Common channel signalling systems	M.4000–M.4999

For further details, please refer to the list of ITU-T Recommendations.

ITU-T Recommendation M.3017

Framework for the integrated management of hybrid circuit/packet networks

Amendment 1

Additional options

Summary

This amendment to ITU-T Rec. M.3017 *Framework for the integrated management of hybrid circuit/packet networks* contains additional subclauses to clause 8.1.1 "Logical Architecture".

Source

Amendment 1 to ITU-T Recommendation M.3017 (2003) was approved on 13 April 2005 by ITU-T Study Group 4 (2005-2008) under the ITU-T Recommendation A.8 procedure.

FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

NOTE

In this Recommendation, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this Recommendation is voluntary. However, the Recommendation may contain certain mandatory provisions (to ensure e.g. interoperability or applicability) and compliance with the Recommendation is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the Recommendation is required of any party.

INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this Recommendation may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the Recommendation development process.

As of the date of approval of this Recommendation, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this Recommendation. However, implementors are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database.

1) Scope	1
2) New clauses 8.1.1.5, 8.1.1.6 and 8.1.1.7	1

Framework for the integrated management of hybrid circuit/packet networks

Amendment 1

Additional options

1) Scope

This amendment contains extensions to the 2003 version of ITU-T Rec. M.3017. The logical architecture options 1 to 4 are described in 8.1.1. Besides these 4 options, this amendment gives 3 additional options (options 5, 6 and 7) for logical management architecture for HCPN.

2) New clauses 8.1.1.5, 8.1.1.6 and 8.1.1.7

Add the following new clauses:

8.1.1.5 Descriptions for logical architecture option 5

In option 5 (see Figure 14), the Inf. EMS works as an integrated EMS to manage cNEs, iwNEs and pNEs directly. This could happen in a newly built hybrid network where an integrated EMS is required to manage all the NEs in the network. For an existing hybrid network, the functions of original Inf. EMS can be extended for the Inf. EMS to manage pNEs.

In this situation, pNEs provide interface 1B to Inf. EMS as well as to IP EMS. And as the iwNE has specialities of both cNE and pNE, it can provide both interface 1A and 1B.

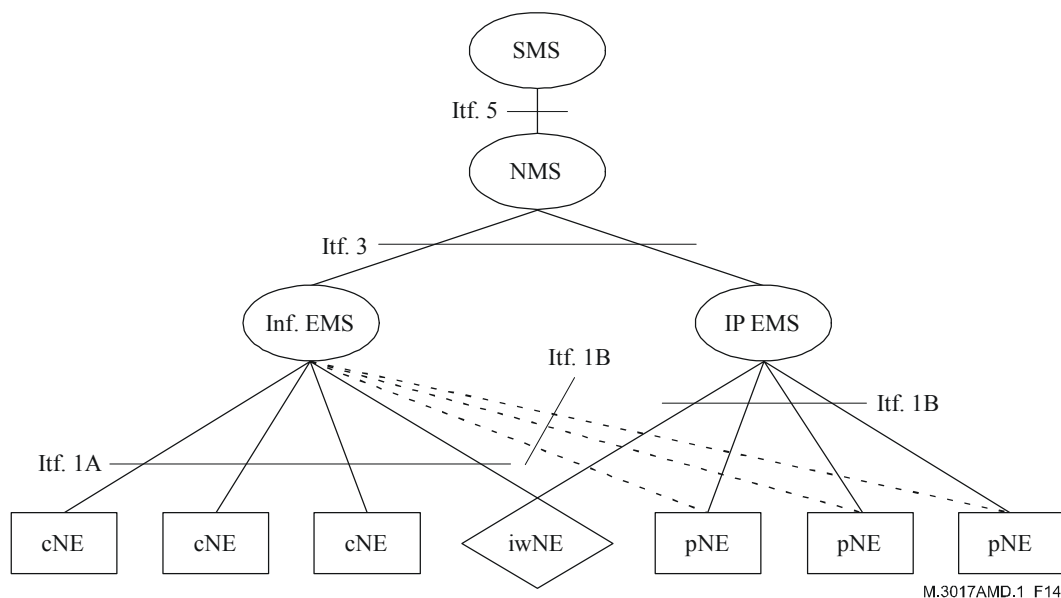

Figure 14/M.3017 – Integrated management of HCPNs option 5

8.1.1.6 Descriptions for logical architecture option 6

Option 6 (see Figure 15) is the same as option 5, except that in this case, the IP EMS works as an integrated EMS to manage the whole hybrid network. The cNEs are to provide interface 1A to both IP EMS and Inf. EMS. And the iwNE provides both interface 1A and 1B.

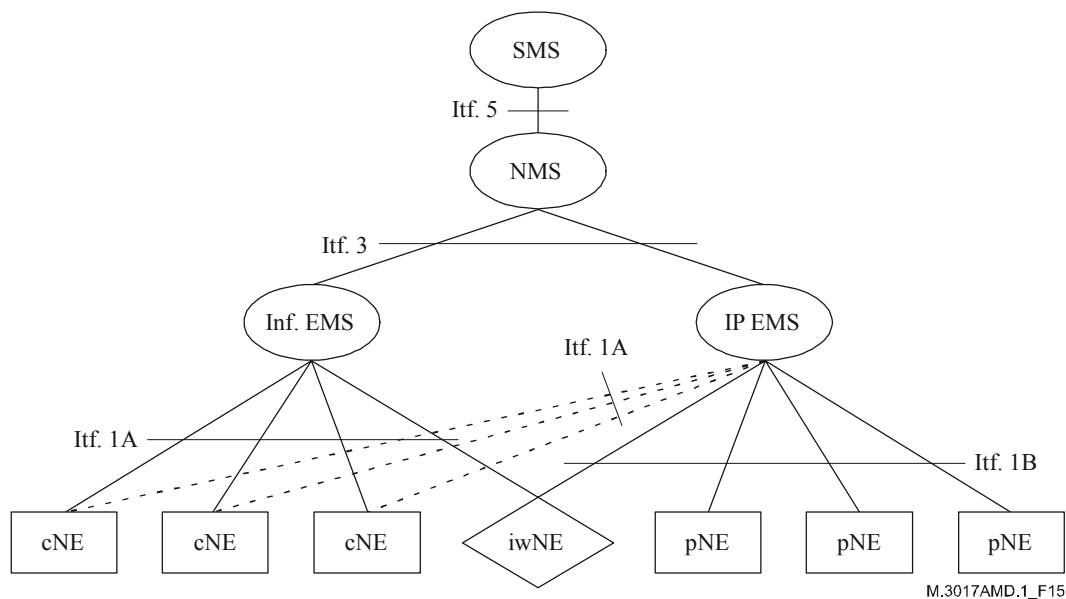

Figure 15/M.3017 – Integrated management of HCPNs option 6

8.1.1.7 Descriptions for logical architecture option 7

Option 7 (see Figure 16) is the same as option 4, except that in this case, the Inf. EMS accesses pNEs by interface 1B directly and works as an integrated EMS.

SERIES OF ITU-T RECOMMENDATIONS

Series A	Organization of the work of ITU-T
Series D	General tariff principles
Series E	Overall network operation, telephone service, service operation and human factors
Series F	Non-telephone telecommunication services
Series G	Transmission systems and media, digital systems and networks
Series H	Audiovisual and multimedia systems
Series I	Integrated services digital network
Series J	Cable networks and transmission of television, sound programme and other multimedia signals
Series K	Protection against interference
Series L	Construction, installation and protection of cables and other elements of outside plant
Series M	Telecommunication management, including TMN and network maintenance
Series N	Maintenance: international sound programme and television transmission circuits
Series O	Specifications of measuring equipment
Series P	Telephone transmission quality, telephone installations, local line networks
Series Q	Switching and signalling
Series R	Telegraph transmission
Series S	Telegraph services terminal equipment
Series T	Terminals for telematic services
Series U	Telegraph switching
Series V	Data communication over the telephone network
Series X	Data networks, open system communications and security
Series Y	Global information infrastructure, Internet protocol aspects and next-generation networks
Series Z	Languages and general software aspects for telecommunication systems
